Subject: [HoustonScan] Little York/Northwest question

Hi Everybody,
I was wondering what EMS department responds with Little York and Northwest VFD's? Didn't know if it was Harris County or Cypress Creek. I know Little York is dispatched by Cypress Creek and Northwest is dispatched by Harris County.

Thanks for any help!
Marvin

# 9594. talkgroups on Pasadena system

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-29 00:26:35 UTC
From: Myles Barkman
Topic: 9594  Message: 9594

Logged some not-normal-to-Pasadena-system talkgroups today.
16 (could be used for testing)-----logged around 9am Tuesday
13872 Webster PD----logged on multiple days
14448 Webster FD----logged on multiple days and as late as 6:12pm Tuesday
15024 Harris County District Attorney
15088 Harris County District Attorney Ops--------logged over a span of
hours, and as late as 5:43 pm
22384 Houston Airport System-Bush-IAB terminal -----logged once

Sometimes, these hits appear to be flukes or errors in the signal.
Might program in at least the Webster talkgroups and see if you actually
hear them pop up on the Pasadena system.

Mo city is getting absorbed, as is League City later on. Not sure for the
date on Mo city but I got that directly from the head guy there when I was
working out the MOU's for HPD to use their TG's...

Steve

The assault-weapons ban was racial profiling for guns.

I know that the work cycle is not plan/start/finish, but is wait/plan/plan.

I heard Sugarland mention earlier today that their console couldn't
display radio IDs until the "changeover" was complete. Wonder if that
has anything to do with that.

Of course, they could be on a Pasadena timetable too..

Holy cow! Boy you said it.
I'm not making any more comments about Pasadena switching over until I actually see something change.
I don't know what all the problems are and if they have ever had this much trouble switching over other sites.
Perhaps they could just be playing things safe since there are so many units on the Pasadena system, they don't want a failure to keep things from running smoothly.
Just wait until Galveston County switches.

From: Myles Barkman
Topic: 9609  Message: 9609

Several cities in East Texas have temps in the upper 80's right now after a large area of rain/severe storms just swept through the area. Beaumont is at 88 right now with winds from the northeast.

Hearing grass fires and heat-related illness calls all over the radios today around here.
Bacliff is battling a grass fire near 27th street and Broadway.
Galveston County is conducting a water search for a person. Ops on talkgroups 50864, 50960, and 50992.

Hearing "security" types on talkgroup 43488. This has historically been used by folks for beach security during major events.
Have never confirmed who these folks are. There are several talkgroups in that area that are out-of-the-norm from normal Galveston County system use.

Well that was an interesting response.
Actually, I think John must have been responding to someone else's email altogether, probably about the Amber Alert that was put out for Galveston earlier today. I figured it might have been a hoax.
Anyway, as I see has just been posted as I write this response, it is PHI Airmed 5.
They are the only commercial medical evac helicopter in the area that I know of that has floats on it, which allows it to fly across the bay to Chambers County if called out there.
They operate on 159.900 MHz. The dispatcher is in Phoenix where PHI is based.

More information from a non-official webpage at:
http://www.phiairmedical.com/

And the official company webpage at:

We do. We put it into operation about a month ago. Call sign PHI MED 12. They also operate on the 159.900 MHz. As for based, the ems operations are in Phoenix, our main HQ is still in Lafayette. Also for the ones that can receive Montgomery Co's systems I use PHI 1 talkgroup when im on duty. Better reception.

Glenn H. Jones, Jr.
PHI MED 5 Pilot

Well, if your desire was to get a bunch of folks to reply back negatively to him, I'm sure you will get some result from that.
But usually the best way to handle folks like this is to simply ignore them. Sometimes, people even say things they know are not true just to stir things up and get attention.
If he was a politician like Sen. Rick Santorum that could affect my ability to get free and timely weather information, that's another matter.

This guy is just some bonehead that apparently has passed up a lot of accidents and is pissed that he gets delayed a few minutes. He probably never has and never would bother stopping to render aid if no one else was on scene.

The only way his opinion would be changed is if he was involved in an accident on the Southwest Freeway during rush hour and then he'd be begging for the freeway to be shut down and signing anything anyone shoved in his face.

Don't give him any fuel and there won't be any fire.

From: Myles Barkman
Topic: 9618  Message: 9618

I was just about to send out this article I found in the Eagle about PHI but you beat me to it.
I wondered why they numbered the bird "12" which is not normal for the South Texas ones to get odd numbers and the north ones to get even.
http://www.theeagle.com/businesstechnology/042305medevac.php

I'd like to see pictures of that, especially the part with the "12".
Did you happen to get the tail number?

Good Afternoon,

I was moving a friend into apartment complex yesterday. I was trying to see what agencies would respond to that complex. It is around Nasa Rd 1 and Kirby Blvd. Also I saw what looked like a clear lake ems supervisor or squad truck running code yesterday. I noticed that they had a either a coaster or Q2b siren on. Im a firefighter in Louisiana and we're currently looking for medical type squad truck. I like how the clear lake ems unit sounded with q2b siren on it. Thanks for the time. Be safe Happy 4th

I have found where I saw the NASA list. It is to big to post here I
think.
Scan-Cat Gold has as a bonus section "Disc Full of Frequencies."
I use Scan-Cat with the RS Pro 2052. Works great.

Hi Jason,
Actually, that is a point where several agencies jurisdictions come
together.
Taylor Lake Village Has Kirby and to the East and North of Nasa Rd 1. Their
PD uses 453.825 MHz.
El Lago is Nasa Rd 1 and to the South and East of Kirby. They are also on
453.825.
West of Kirby is Pasadena which is on their own trunk system.
I believe Pasadena Fire might cover those areas as well.
CLEMC (Clear Lake Emergency Medical Corps) serves that area as you have
already found. They use 155.400 MHz.
That area is part of Harris County Sheriff's Office District 3 and
Constables Precinct 8 which use the STAR-Net trunked radio system.

Should be lots of marine activity down there with the holiday weekend too.
Listen for the Coast Guard Auxiliary units on 157.175 MHz with callsign
"Radio Seabrook".
You might also hear Coast Guard units on 157.050 and 157.075 MHz.

Happy listening and stay safe!

Myles

# 9626. Re: couple of questions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-03 19:42:02 UTC
From: Joe Gay
Topic: 9619  Message: 9626

I believe it is an electronic siren made to imitate the sound of the Federal Q Siren. Q's are a siren rotor attached to an electric motor, hence an electric rather than electronic siren. Unlike electronic sirens that produce whoops, wails and yelps, the only variation in tone in the electrics is from the speed of the motor. Q's are mounted mostly on fire apparatus and firefighters, myself included, tend to just love that sound. The qB2 is a cheap imitation.

Yes, Federal does indeed list a Q2b. I was trying to determine what its sound signature was in case a special application I had in mind could benefit from it.

Ah, the true old-fashioned wailers. Did you know they were originally turned by hand? Then someone rigged a belt from the engine. Hence, you got the old wail you are so fond of.

No thanks. My peculiar application calls for something a tad more fearsome. >:) Face it, wailers are just too genteel. Everyone knows wailers are only found on fire apparatus. Sure, they're BIG, but their occupants are far too kind. Showing one how stupidly you drive (or, in the case where my application is mostly used, walk) doesn't bring fearful consequences to the average beer-pickled mind. >:)

Patient report from Lifeflight 4:
46 YOM, shot twice by LEO.
Once in right thigh, once in left ankle.
Didn't sound too critical.
No other info.
Enroute to Hermann at this time.

Patient report from Lifeflight 4:
46 YOM, shot twice by LEO.
Once in right thigh, once in left ankle.
Didn't sound too critical.
No other info.
Enroute to Hermann at this time.

No, just happened to catch LF on the return trip. No other details known.
Did hear base tell LF4 that media was on the pad. LF4 responded "thanks for
the warning."

From: Frank Marshall
Topic: 9628  Message: 9634

It depends on where the scene is. In the county HAHERN or MUTUAL AID. In Conroe, sometimes MED TAC 1 and sometimes an ITAC frequency.

Frank

Beat me to it..

So far, I've confirmed PD (44336) and FD (44144) Dispatch on both Downtown and the Missouri City STAR-NET sites. For now, the MC site seems to be carrying the bulk of the traffic. None of it is being repeated on the Mo. City system, which is still showing a 1422 ID. The fire pager multicast is still up on 154.07 (146.2).

I just saw Stafford PD come across the screen here on T4Win listening to the Houston site. Will take a peel at Pearland later.
I suspect once they are comfortable with the switchover, that the 1422 site will go away and the freqs splattered into other sites as needed. They are both collocated on the same tower at the same height so there is no need for both systems. Unless they plan on keeping the public works/animal control and whatever other non public safety ops on that system.
Has anyone confirmed any Type I usage still on the system?

From: Myles Barkman
Topic: 9635  Message: 9642

Trying to monitor the Pearland system when I noticed that sometimes my
decode rate turns to poo-poo.
Saw what looked like noise on the waveform that was not deviation on the
control channel itself.
Checked adjacent channel 866.1375 MHz and heard the data from one of
Pasadena's MDT channels that it still downtown.
It pretty much eats my lunch when trying to listen to Pearland's control
channel on 866.150 MHz.
Is this because I am tapped into the narrowband discriminator and it
receives a wider bandwidth signal that the audio that is passed onto the
speaker? The audio of the control signal sounds fine through the speaker.
Turning the attenuator on didn't make a difference.
I guess without a beam or some other type of band-pass filter, there is
nothing I can do about it.
The MDT signals on 866.1375, 866.2325, 866.3875 and 866.6375 all come on
and off at the same time.
Now, they are staying on more continuously. Guess they are trying to shut
me down.
DARN THAT BIG BROTHER!!!

Monitored on Richmond and Clodine.

Too far away from Pearland to catch any traffic.

On another note, I have been monitoring Pasadena TAC-6 on Starnet.
Plus, for the first time in ages, I have heard SJJC-North on Starnet.

Has anyone else monitored these before today on Starnet?

Sorry about that. I saw the pending moderated message first thing this morning but forgot to approve it.
One of the prices to pay for spam-free list management.
The Montgomery County trunked radio system is mostly analog. I can't hear it from my location but I suspect any Provoice digital activity is limited to surveillance or swat activity. Maybe someone else can clarify what talkgroups actually encrypt, sometimes or all the time.
I wonder if all public safety radios have the capability and if certain "sensitive" dispatches are done in digital.
But for the most part, you shouldn't have to worry about it.

Date: 2005-07-09 20:41:59 UTC
From: Myles Barkman
Topic: 9659  Message: 9659

Here's a handy listing of old and new RR freqs and channels. This includes
the new narrowband VHF and UHF freqs available.
http://www.radioreference.com/apps/wiki/index.php?title=Railroad

As of today, 7/9/05, none of these new freqs have been licensed in the
Houston area that I can see.

# 9660. RE: [HoustonScan] Railroad freqs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-09 23:28:23 UTC
From: Michael W. Jones
Topic: 9659  Message: 9660

There's no one using those frequencies yet, since the radios are, as far as I know, still only the 96 channel Motorola radios they've been using the last 10 years or so.

I don't expect to see a change to the narrowband frequencies until the industry makes the much discussed move to an VHF APCO-25 digital trunking system, that has been proposed and trialed in Portland Oregon the last few years. Even then, this will not be an overnight change, since there are tens of thousands of radios and repeaters nationwide that would have to be upgraded or replaced. This does not take into account the "inband" wayside systems that will have to be migrated off the VHF to the ATCS system (Haven't seen any in or around Houston, but they are more prevalent up towards DFW), nor the defect detectors that will need their radios upgraded.

Also, many new frequencies are being licensed by "Association of American Railroads" on a nationwide basis, so you might not see them show up on local searches.

No, but you might scan the 145-148 MHz and 442-445 MHz ham bands for
Echolink or IRLP links to the affected areas.
I heard some folks coming through the 443.825 MHz repeater earlier
talking about how one of the NOAA weather radio transmitters on
162.400 MHz over there somewhere went off the air.

By the way, I'm experiencing some pretty nasty computer problems right
now.
If anyone has a spare ATX-1523D power supply that goes in HP Pavillion
desktop computers that they can part with and maybe a mother board, or
perhaps the whole tower, let me know. :(

If you get to the point of replacing that PC, Dell has some really good deals going on line at www.dell.com/tv. One of them even throws in a flat screen monitor. They also have a pretty good $550 laptop, if you're inclined to go that direction.

Echolink "WX-Talk" conference is up and running, for those with EchoLink.

# 9668. Re: BPL in Houston!!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-12 23:34:30 UTC
From: elentz1
Topic: 9082  Message: 9668

CenterPoint Energy and IBM Examine Innovative Ways to Use BPL Technologies

CenterPoint Energy, Inc.'s electric transmission and distribution subsidiary, CenterPoint Energy Houston Electric, LLC, and IBM are working together to explore broadband over power line (BPL) technology. CenterPoint Energy has opened a BPL technology center at one of its facilities in Houston to examine uses of BPL technology for consumers as well as utility companies. In addition, CenterPoint Energy has launched a limited pilot program designed to demonstrate the capabilities of BPL in the home to Houston-area consumers.

BPL technology is an innovative way to provide broadband services to customers, while at the same time enhancing electric delivery system reliability. An exciting aspect of this technology is a customer's ability to access, through a BPL modem, high-speed broadband Internet services over existing electric power lines with their computer that is simply plugged into any electric outlet in their home.

"This is an exciting technology to explore. We believe BPL has the potential to enhance existing electric delivery systems through the development of 'smart grid' technologies, such as automated meter reading, real time system monitoring, preventive maintenance, outage detection and restoration, as well as other potential applications," said Don Cortez, CenterPoint Energy Houston Electric vice president responsible for BPL Development. "These 'smart grid' technologies should result in improved system reliability, service and safety for electric customers."

BPL has the potential to provide faster, more reliable Internet service and eliminate the need for communication wiring of homes, which is required for DSL or cable. This provides customers greater flexibility for using the Internet along with other sophisticated technology services. Those services, among others, could include Voice over Internet Protocol (VoIP), Video on Demand (VOD), home environment management and security monitoring services.

"Broadband over power lines is an emerging technology, which will positively impact the utilities and broadband marketplace. It is one of several technologies that can help create what we call the intelligent utility network, where energy is delivered, monitored and managed in real-time, on demand," said Bernie Hoecker, vice president, IBM Energy & Utilities Industry. "IBM's work with CenterPoint Energy on the BPL technology center and the pilot program in Houston is a prime example of partnering to innovate."

This technology is being used today in Europe and many other parts of the world. In the United States, a number of utilities, including CenterPoint Energy, have launched limited pilot programs to field test BPL. CenterPoint Energy's pilot program, utilizing second generation technology, provides BPL service to an area containing approximately 220 homes in southwest Houston. This pilot program, in which up to 50 residents can participate, will run through August 2005. At the conclusion of the pilot, IBM will help CenterPoint Energy assess customer satisfaction and the lessons learned from the pilot, and CenterPoint Energy will evaluate the potential for BPL market deployment.

President George W. Bush -- who has expressed his hope for universal, affordable broadband access by 2007 -- and state regulators across the nation are working to encourage deployment of broadband services, and specifically BPL. Since BPL technology uses existing electric power lines, it has the potential to reach every customer that is connected to the electric delivery grid -- a marked advantage over cable and DSL broadband.

A select group of technology companies are teaming with CenterPoint Energy and IBM on both the BPL technology center and the pilot, including IDACOMM, Amperion, Broadband Energy, Cisco, Itron, Mitsubishi and PCPC.

IBM has tapped its wide range of energy industry and technology experts, as well as leading hardware and software, for both projects. For the BPL technology center, IBM Global Services assisted in the design, build and implementation of the center's technology infrastructure, displays and demonstrations, which utilize IBM xSeries servers, PCs, IBM wireless solutions and IBM Kiosk technology. For the pilot program, IBM is providing project management and support as well as ongoing assessment and monitoring of equipment usage.

About CenterPoint Energy
CenterPoint Energy, Inc., headquartered in Houston, Texas, is a domestic energy delivery company that includes electric transmission & distribution, natural gas distribution and sales, and interstate pipeline and gathering operations. The company serves nearly five million metered customers primarily in Arkansas, Louisiana, Minnesota, Mississippi, Oklahoma and Texas. Assets total about $17 billion. With more than 9,000 employees, CenterPoint Energy and its predecessor companies have been in business for more than 130 years. For more information, visit the Web site at www.CenterPointEnergy.com .

About IBM
IBM is the world's largest information technology company, with more than 80 years of leadership in helping businesses innovate. IBM Energy and Utilities Industry brings together IBM resources, including information technology, deep industry insights, and

research expertise, to help clients in the energy and utilities industry to serve their customers better, work more efficiently and become on demand businesses. For more information, visit www.ibm.com/industries/utilities.

If I was to render a guess, they're recent assimilations by the Borg, er StarNET from Missouri City:

44336 was Stafford PD 1 on Missouri City

The others don't show on the Pasadena or Missouri City systems (both of which I've heard are in the process of being absorbed into the system.)

I can't verify that, since I'm still in the process of programming my new BCD-396T, and if it's not on the Downtown tower, I don't hear it at home here in the Heights. (Not like I've had much time to listen with activities at work anyway).

# 9672. Bryan and College Station Trunk Systems

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-13 14:59:49 UTC
From: navscanmaster
Topic: 9672  Message: 9672

If anyone can answer this, please do. I got to look at a Bryan Fire Department XTS-5000. They have the A-B-C toggle switch at the top of the radio. The A toggle setting is for the Bryan/Brazos County TRS talkgroups which include the 4 BFD talkgroups and some BPD talkgroups. The B toggle setting brings up 2 of College Station's Fire Talkgroups. How does this work? They are two separate systems, one SmartZone and one SmartNet. I have been hearing a lot of combined responses in which the dispatcher says switch to College Station, or vice-versa. Does Motorola easily patch over talkgroups between two systems, or does College Station have to upgrade to a SmartZone technology? Plus the fire radios also have TAMU UPD and UEMS talkgroups, which are another system entirely as well. Somebody educate me!

Can anyone confirm that NASA is still using 171.15 at JSC for flight audio, etc? We lost our analog NASA TV and the cost of getting a digital rcvr makes it out of reach for a ham group who wants only to repeat NASA audio on the 2mtr (and others) ham band. Picking up the 171.15 xmtr and repeating it makes it easier....even though I WISH JSC would put a UHF say 445.0 or 446.975 xmtr on with ONLY NASA flight audio (No news conferences, etc as on the 171 channel at times).. HELLO?? FELLOW members of W5RRR??? Are you lsitening?? I'll supply the xmtr wired and ready...all you need to do is supply antenna, feedline, location and 600ohm balanced audio feed :)

Each channel position in the radio can be programmed with a
conventional channel or a talkgroup on a trunked system. All channels
do not have to be on the same system. When they switch the radio to a
talkgroup on a different system they are communicating directly on the
other system.

It's been several years since we last heard the 171.150 from JSC. If I remember correctly they stopped using it at least two years or more before the last mission. It was used for audio for NASA workers and covered a small area around NASA. Gulfgate was about as far North as we could hear and sometime on the west side of Houston. Was talking many years ago to the person in charge of NASA Public Relations and he stated that it was not a frequency they were authorized to use but they used it anyway.

Maybe if you contact someone with NASA Public Relations office they will let you install a repeater to broadcast the audio directly from their receivers.

At my former company, we had a 171.15 rcvr in Raywood TX on a microwave tower at about 100ft or so with a 4 el yagi pointed at JSC, would relay the audio via 6 Ghz microwave to Beaumont and out on 147.56......but my former cohorts there are not sure if the rcvr (MICOR) is still active..and if 171.15 is not on, its a moot point....with the drop of analog on the sat and they going to digital only, that choice is gone now.
==========
Glenn, any Free to air ot clear to air is fine...all we need is audio..no video (but would be nice :)=

Actually Ed, I heard it being used just a couple of weeks ago. I
slipped through town at the end of June and visited some family in the
Clear Lake area. I heard 171.150 MHz alive with ISS mission update
audio. Also heard the new encrypted JSC trunked system, too...

As I recall the 171.150 MHz transmitter didn'd have much range.

Main problem with the 146.64 rptr......HAM conversations (really!... it constantly covers up the NASA audio....if they REALLY want to do something, why not put NASA audio up on a separate NON rptr freq on say 445 or 446 simplex then ANYONE could grab it and repeat it anywhere else...and there would be NO chatter from 64 rptr on it...
Thats what we were doing in Beaumont and Conroe on 147.56 simplex...just NASA audio from 171.15 or NASA TV, nothing else (except the CW IDer :)

Already aware of Fresno. I monitor it all the time. All FDs reasonably close to my hut are monitored. Not necessarily for fires, but weather events that approach my location. After hearing a fire dispatcher advise the responding units that a tornado was on the ground between the fire station and the fire, I have every department in my area, and a few "upwind" in my FD/EMS banks.

Fresno does not often go to fireground, so, it should be interesting listening when they do. The last time I heard them use it, I was in the Sugar Land area and they were fighting one of the summer grass fires, so, monitoring was easy.

I am wondering what W I-10 FD is going to do when their Channels 3 and 4 are assimilated. For now, they have been nice, semi-secret back channels that not many folks in their territory could monitor, especially if they were using generation 1 or 2 trunktracking scanners. I guess we will be hearing the Captains and Lieutenants using their Nextels more often. :^<

Also, I have monitored Sugar Land PD 1 this morning on the Starnet Downtown site.

# 9695. Re: Assimilation

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-15 19:04:37 UTC
From: David
Topic: 9675  Message: 9695

In reference to your post below, we do not use the Mo City Channels that often. The distance kills us on reception. Those channels were aquired many many years ago before we switched to Starnet in the late 90's. Mo City was a backup system for our convential 800 system that we used prior to switching to Starnet. We decided a few years ago to keep these channels because we knew that Mo City would eventually merge with Starnet and it would give us 2 more tactical channels on Starnet. And yes, Our officers do use Nextels quite often.

David Hartley
Station 2 Captain
West I-10 Fire Department
1773 Westgreen Blvd
Katy, Tx 77450

Office: 281-675-3620
Cell: 281-802-2810
Nextel ID: 142*35*209

--- In HoustonScan@yahoogroups.com, "bpckty1" <bpckty1@m...> wrote:

I am wondering what W I-10 FD is going to do when their Channels 3 and 4 are assimilated. For now, they have been nice, semi-secret back channels that not many folks in their territory could monitor, especially if they were using generation 1 or 2 trunktracking scanners. I guess we will be hearing the Captains and Lieutenants using their Nextels more often.

# 9696. Re: Assimilation

Yahoo group: HoustonScan (2005 — 2006)

From: bpckty1
Topic: 9675  Message: 9696

I figured that they were just there as a backup, until the switch began. But, it was interesting late one evening while leaving a car dealership in Stafford to hear one of the Supervisors call another Supervisor to use one of the channels. It verified that they were indeed active, and not just taking up space. But, now that they are/will soon be/ on Starnet, they will certainly be a great help now that Mason Rd is soon to become a mess.

And, yes, I figured that Nextels would be in favor by command. They seem to be "everywhere".

In the past I've returned my BC & Uniden radios to Uniden for repair.
Usually, if repairs exceed original cost or if it's beyond repair,
they would offer a discounted price on a replacement radio.

You could also try calling a guy named Roger with Coastal Communications
281-332-2222. He may be able to help you he has done good work for me
in the past and is not overly expensive.

In the past I've returned my BC & Uniden radios to Uniden for repair.
Usually, if repairs exceed original cost or if it's beyond repair,
they would offer a discounted price on a replacement radio.

try Jerry's Electronics 713-697-3310 they have some funny hours so
you may have to try several times to catch them.

From: Myles Barkman
Topic: 9670  Message: 9705

I can't comment on that right now since my computer died last Saturday. Got another one on the way that will be here Tuesday (hopefully) and then maybe I can get my life back in order. Haven't been able to do much searching on the STAR-Net system lately.
Any data I have from T4Win from monitoring the Houston site is sitting on my hard drive waiting patiently on my desk waiting for a host computer.

So from what everyone has said, the old STAR-Net site 2318-15 does not exist, at least none of the frequencies is a control channel.
The old Missouri City trunk system 1422 is now showing up as system 2318 (system 15?). Does is use frequencies from both systems now?

What talkgroups are the public works folks using?

From: Myles Barkman
Topic: 9706  Message: 9706

PHI Med 5 has been called to the Cleveland area to assist in searching for a possible drowning victim at some lake.
Person was last seen around 8am this morning.
PHI ops on 159.900 MHz, ground contact with Cleveland on 154.280 MHz.
Now they are giving 154.950 MHz as the ground contact.

Can use audio from NASA TX. Is this the same as what comes off a DishNetwork Sat?

I sometimes watch NASA TV off a DishNetwork Sat that has been turned off. NASA TV is the only channel that still works (Other than 101 Dish FYI).
It seems like there is a lot of stuff on NASA TV you may not want to rebroadcast. You may have to figure out how to pick the ISS Mission spots.

Fire at the Cowboy Ranch restaurant in Pasadena, Red Bluff and Spencer.
PD on scene running traffic control before FD even arrives.
Heard something about some lights being on fire.
How many restaurants in Pasadena have to burn down?

Gilley's
Lone Wolf (Deer Park?)
Kelly's
Cowboy Ranch

Fire chief on scene reporting light smoke, flames showing.
Moving all traffic to Fire-2, TG 7312.
Myles on laptop

Beasley does have a VFD. They run on their own talkgroup on STAR-NET
(I think) with a lowband paging multicast (confirmed, on Myles' list).
Dunno about Simonton. I've never heard a Simonton VFD dispatched.

Sorry about not approving this message earlier. Going through growing pains
of getting the new computer set up.
Still lots of work to do. Basically starting from scratch.
Putting the old hard drive in this comp did not prove to work the way I
envisioned.
May have to have the HD dumped onto DVDs and grab what info I can off of it
to rebuild the best I can.
So bear with me if I don't update lists in a timely manner or can't answer
questions for awhile.

From: John Riley
Topic: 9714  Message: 9723

Go to www.hcec911.com and click on the links to the individual FD's. Some of their sites give rough ESD boundary information. You might also try the HC Fire Marshall's office.

Thank you very much, John and Josh,
for your help. Is there a map online showing Aldine, Eastex and Westfield's territories?

Take care and thanks again,
Marvin

Just wondering what FD is first in to North Harris County College on W.W. Thorne? Is it Spring, Aldine or Westfield?

And does Simonton have their own FD or are they served by Fulshear? And does Beasley have a FD or are they served by Kendleton, or vice versa?

Thanks,
Marvin

# 9728. Missouri City agencies

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-24 09:00:24 UTC
From: Myles Barkman
Topic: 9728  Message: 9728

Can someone verify what's going on with the agencies that were on the old
Missouri City 1422 system?
Are they all using the same talkgroups on the new 2318 system?
What site is the new system showing up as (2318-15?)?
What freqs are part of the system? (old+new together?)
What TG are public works using?
Are they commonly heard on other systems?

From: bpckty1
Topic: 9728  Message: 9729

Same, possibly more, frequencies (maybe the 2318 frequencies
have been combined with the old Mo City frequencies).

Same talkgroups.

They show up on the Downtown/Richmond/Clodine sites.
I cannot comment on the others, since I normally don't
listen to them, but I suspect the Angleton/Alvin/Pearland
sites possibly carry the Mo City group transmissions.

I don't have the equipment to comment on the site number, and
I normally don't follow the public works, but I suspect that the
Type II talkgroups remained the same, but I suspect the Type I
talkgroups are gone and have been reconfigured into Type II.

The wilson radio you have contains 14 pre programmed channels on the old uhf RCC frequencies 454.XXX rx and 459.XXX tx the unit is capable of 2805hz tone signalling some also did several other formats. If i come across the information in my file i will let you know if it can be reprogrammed to other frequencies. Was a long time since i worked on one of these. Same radio as the WU1516 with different firmware.

# 9732. Vacation

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-26 01:30:40 UTC
From: George ( Woody ) Fletcher
Topic: 9732  Message: 9732

Hi Group,
I joined the group a few weeks ago because I'll be visiting the area
later this week. Hope to be there from the 27th - 30th. Looks like
I'll be on the north side of town, just off of 45 near exit 62.
I've enjoyed reading the posts and appreciate all the information
in the database. I'm a ham and my call is KF4TQJ. My name is George,
but all my friends call me Woody, short for my middle name, Elwood.
I hope to check into a net or two while I'm there. I call a Sky
Warn net here in N.E.Alabama every Thursday evening.
73's
Woody / KF4TQJ / FP# 430

Message to Woody:

Woody,
While in town try the 146.920/146.320 tone 103.5. A few hams hang out on
that one.
And welcome to Texas when you get here.
Dwayne
KB5YTA

From: Myles Barkman
Topic: 9734  Message: 9736

The only repeater I know of that does it regularly is the JSC Amateur Radio Club 146.640 repeater W5RRR.
The link for shuttle audio can be turned on or off by users of the repeater so you never know when it will be on. And it may still be used for regular 2-way conversations during the link transmissions which makes for annoying listening.

On the other hand, if you are within a few miles of the Johnson Space Center, you can try listening to 171.150 MHz if your radio can tune there. It carries NASA Select Audio all the time, but not just the shuttle audio. It also carries press briefings and other programming.

I don't hear any activity on either frequency right now so are they asleep already?

I didn't know about that little tool. Thank you. Where can it be found?

What is the next best system to listen to beside the Mo. City system?

As far as multiple alarms or station coverage, is mutual aid handled
via the phone or on another frequency?

Thanks again

Jason

# 9739. Missouri City STAR-Net site

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-28 23:43:27 UTC
From: Myles Barkman
Topic: 9739  Message: 9739

Well, been doing a lot of monitoring of the system the last few days to answer some of my questions:
Freqs heard so far are
857.9625
858.9625
859.9625
860.9625 primary control
866.0875
866.7375
867.675
868.175
868.450
868.5125
868.7875
868.875

Have not been able to confirm a secondary control channel yet but suspect it could be 857.9625.
System 2318 site 15, alias "MC". Connect tone 83.72 Hz.
Have logged usual police/fire dispatch TG for all local agencies (Stafford, Missouri City, Sugar Land)
There are several talkgroups that I have not been able to identify from any lists:
45296
45328
45360
45392
45424

Perhaps these are public works/local govt TG.
I'm too far away to actually track this system, but I can pick up the control channel on the Pro-2004 well enough to let the computer log activity.
Perhaps others closer to the action can fill in the blanks.

That was for the original site that was in addition to the 1422 City of Missouri City trunk system that was on the same tower.
Now that they have merged, I think they must have one of the control channels from each system to make up the two possible control channels on the new combined system.
857.9625 is the seldom most used I've seen logged and I suspect may be the secondary control channel.

# 9744. HFD TAC-6

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-31 02:35:42 UTC
From: Myles Barkman
Topic: 9744  Message: 9744

Who are these guys talking on HFD TAC-6, 462.950 MHz?
Sounds almost like security types talking to one another.
They are watching activities of people around a street "Rogerdale" which I see off the west Best near Westheimer.
They are talking pretty casually, one of them actually said the SH!T word.

They are using the correct PL to come through the repeater and no HFD folks are saying anything about it.

# 9745. Pro 2067 & Win 92

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-31 02:43:55 UTC
From: gary
Topic: 9745  Message: 9745

Once again I am asking for assistance on using the Win92 software. I have been able to enter the areas I was looking for and the Talk group Tags and ID's. Thanks Ed...
Now will the 2067 display the Tag instead of the ID # ?

Hope so.

And, I am getting ID's that are not programed how do I or can I stop that.

Help

Thanks

Gary

Sitting in the Heights I'm not hearing them. Even took tone squelch off one of the scanners, and not hearing anything. (And I'm close enough to HFD's repeater to hear them with no antenna at all!)

Looked at the DX forecast, and nothing predicted there that might clue us in.

Got me stumped Myles.

Hadn't been listening continuously. Been scanning around listening to this
smoking luggage call out at Bush airport baggage claim.
Perhaps the guys got together and decided that they should change channels
since HFD was "interfering" with them.
Or maybe they finally figured out they were on the wrong channel.

# 9748. Re: [HoustonScan] Deer Park/LP/Pasa Freqs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-07-31 13:51:42 UTC
From: Myles Barkman
Topic: 9718  Message: 9748

I'm not usually home when the schools are in session. Here's what info I have, not sure how good it is.

Pasadena:
ISD Police use the trunked radio system.
See http://home.houston.rr.com/freqzone/freqs/pasadena.html for details.
Buses use 464.025 PL 114.8
Maint uses 462.475 PL 114.8
Individual school for admin and for sporting events use
114.8 461.0375 SCHOOL Pasadena ISD
114.8 461.3875 SCHOOL Pasadena ISD
114.8 462.0875 SCHOOL Pasadena ISD
114.8 463.4375 *SCHOOL Pasadena ISD Ch.3 football
114.8 463.5125 SCHOOL Pasadena ISD
114.8 464.1375 SCHOOL Pasadena ISD
114.8 464.8625 SCHOOL Pasadena ISD
114.8 466.0375 *SCHOOL Pasadena ISD
114.8 466.3875 *SCHOOL Pasadena ISD
114.8 467.0875 SCHOOL Pasadena ISD
114.8 468.4375 *SCHOOL Pasadena ISD
114.8 468.5125 *SCHOOL Pasadena ISD Ch.5 football
114.8 469.1375 *SCHOOL Pasadena ISD

Their license WPCX956 for these last ones expired about 2 years ago so they better not be using them.

Deer Park:
Buses use 151.715 DPL 074?
Buses used to use 463.475 PL 100.0
Maint uses 151.925
Grounds uses 461.925 PL 100.0
other possible freqs are
451.725
461.600
464.150

La Porte:
Buses use 155.235 DPL 023
other possible freqs are
461.075
463.325

If you get a chance to listen to these during school times, let me know what you find out.

Am curious how many of you are going to the Austin hamfest this weekend? The fate of ham radio rptrs in Texas may be in the balance (especially a proposal to charge for rptr coordination!) The voting takes place on Saturday....and you MAY make a difference..
Any ham who shows up at the meeting and pays dues can vote (You donot have to be a repeater coordinator...most of them aren't members anyway so they don't have a say so)

Chris

# 9752. Re: [HoustonScan] fort bend and harris co questions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-01 06:32:40 UTC
From: Brad Dwight
Topic: 9714  Message: 9752

As to Marvin's original question about Simonton, Simonton is inside the boundaries of Fort Bend Emergency Service District #4, which is the funding source for Fulshear - Simonton Fire Department. FSVFD currently has two stations, Station 1 in Fulshear, and Station 2 in Simonton, and two more are on the drawing board. Beasley and Kendlelton both have their own fire departments, but they often mutual aid each other. If you have any other questions just give me a shout.

Subject: [HoustonScan] fort bend and harris co questions

Just wondering what FD is first in to North Harris County College on W.W. Thorne? Is it Spring, Aldine or Westfield?

And does Simonton have their own FD or are they served by Fulshear? And does Beasley have a FD or are they served by Kendleton, or vice versa?

Thanks,
Marvin

# 9757. Re: Radio Shack Scanner Impressions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-04 01:41:04 UTC
From: bpckty1
Topic: 9754  Message: 9757

The Pro-96 is an upgrade of the Pro-95 and it will trunk the APCO-25 digital signals. From what I've been reading on the CenTex Yahoo group, Grimes and Robertson Counties have been using APCO-25. Plus, it will decode CTCSS and DPL privacy codes (necessary in metro areas).

If you don't immediately need digital capabilities, the Pro-95 is great, as well as the Pro-97, which has CTCSS/DPL and LTR trunking capabilities. Many private businesses/ambulances/wrecker services use LTR.

Hope this helps in your selection.

# 9758. Austin

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-06 04:23:36 UTC
From: Chris Boone
Topic: 9758  Message: 9758

If you are going to Austin, just an FYI...I will be hanging on 444.8 simplex..wish I had my portable rptr with me but the rcvr is on the fritz.

Should be an interesting time at the meeting at 1pm....I plan to have camera and digital recorder on hand...some once in a lifetime events (such a public hanging??!) may take place and I want to record it...and then sell the pictures to a rag ;)

# 9759. JSC SZ system

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-07 03:08:16 UTC
From: Rick Parrish
Topic: 9759  Message: 9759

Eric & friends,

Here's some extra info - the JSC Motorola B32C system is reporting the following channels as control and *alternate* control channels ...

391 / 406.2375 CC
407 / 406.4375
439 / 406.8375
723 / 410.3875

I am assuming the band map on RR.com is correct. If not, I've included the channel numbers so you can re-figure the frequencies.

-rick

# 9760. Meeting

# 9762. Special GOLD plated Bird 43 up for auction!!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-09 23:24:04 UTC
From: Chris Boone
Topic: 9762  Message: 9762

Bird Electronics (who is owned by the same folks who own TX-RX, who bought WACOM!), is auctioning their #300,000 Bird 43 wattmeter which is gold plated! You can read about it and bid on it at:
http://www.bird-electronic.com/
The auction is NOT on Ebay...follow the link from Bird's page...(it will last less than 22 hours at the time of this message) and I am not associated with Bird or its companies...just passing this on ;)

My work office in Houston is located near Post Oak at Richmond. This is just outside the 610 loop.

Can someone provide me information
1. what are the HPD and HFD frequencies that cover that area.
2. what division covers this area? Central or Westside Division?
3. anything else i did not know to ask

Thanks in advance

So what are they offering as an alternative to private call? Nextel? I know PISD has already got 'em, but what about the city?

Also, South Houston PD has been conspicuously quiet on the subject.. no mention of radio reprogramming or the like out of them that I've caught.

# 9776. Re: [HoustonScan] pasadena local

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-12 05:08:25 UTC
From: Myles Barkman
Topic: 9767  Message: 9776

Just got back from trip to Fredericksburg. Of course they would decide to make the switch to STAR-Net while I was gone. And you said I was paranoid.

Old 3536 system:
866.8625
867.1125
867.3625
867.6125
867.8625
868.1125
868.3625 (control) connect tone 76.76 Hz system 3536 site 1

New STAR-Net site:
866.1125
866.3635?
866.6125
868.6125?
868.8625 (control) connect tone 105.88 Hz system 2318 site 23

Still noting quite a bit of private calls on old system.
Only hearing three freqs used on new system and one talkgroup (ETMC EMS 7664) so far.
Will gather more data tomorrow as time allows.
Not sure how much more reprogramming will have to be done before the old system disappears and all freqs become the new site 23.
All the Scada system radios still need to be programmed.

# 9778. Re: [HoustonScan] Explosion BP plant just south of Alvin

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-12 05:56:33 UTC
From: Myles Barkman
Topic: 9770  Message: 9778

Got back too late to answer this but for future reference, many of these plants are using Motorola trunking systems. Some UHF, some 900 MHz.
The BP Amoco plant near Liverpool shows the following freqs licensed:
937.3875
937.400
937.4125
937.425
937.4375
938.150
938.1625
938.1875

I can barely hear a control channel on 937.4375 which might be them.
There might be other conventional freqs they use but I don't know what they are.
I'm just too far away to listen to a radio system only meant to get out a couple of miles.

That appears to be correct. The only local government type systems in
Harris County are the City of Houston Motorola system 2221 and the HISD
EDACS system(s).
Also still waiting for League City, Galveston County and who knows, maybe
even Montgomery County.

Hey Myles,

How about the Alief ISD? I think it is still going strong in
the 900MHz band.

You guys sure a letting a lot of changes happen while I am not
there. <grin>

Hey there
I have local frequencies for Pasadena but cant seem to get it to post on here.
How do I get them to post..

# 9783. voice inversion

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-14 05:16:23 UTC
From: Myles Barkman
Topic: 9783  Message: 9783

Anyone else hear the voice inversion scrambling on 159.100 MHz? It is quite weak in Pasadena.
Could be offshore ops.

Galveston Co SO units in pursuit of vehicle north bound on Gulf Freeway feeder approaching Beltway 8. Headed westbound on BW8.
Ops on Galveston County trunk SO Ch.2 TG 50064
HPD Southeast advised and with them 460.025
HC Pct 8 talking about it on 11664. Says he thinks there are about 12 cars involved.
One GCSO unit asked supervisor if he could use PIT maneuver but he said "not in that new car".

Had some attempts of using spikes with unknown results so far.
Waiting for Fox to arrive.
Heard Hitchcock and Dickinson units involved with Galveston Co SO.
Now at BW8 and 90.
Fox is overhead calling the chase now.
Galveston units hitting the Galveston trunk system just fine.
Not sure what kind of interop they are using.
Last spike attempt missed.

Still have not heard what the subject is wanted for. On west BW8 northbound passing Westpark.
Some GC units getting scratchy into trunk. Still surprisingly good for distance.
HPD ops have moved to citywide 460.425 MHz and STAR-Net TG 6544.
Check Toll Law TG 10416.
Chase down to 30mph.
Talking about laying spikes again.
GC units say he is attempting to destroy evidence in car.

# 9791. Re: [HoustonScan] Galveston Co pursuit

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-14 07:09:46 UTC
From: Myles Barkman
Topic: 9784  Message: 9791

Chase terminated and subject taken into custody at 2:02am.
BW8 northbound just south of I-10.

GC units lost contact with their trunk system. About a 40-mile trip to
Texas City tower. If they were part of STAR-Net, it would not be an issue.
AND, everyone would be able to talk to one another.

Hearing HPD calling for ambulance at I-10 and Gessner for subject that may
have swallowed some drugs. Could be the perp who was destroying evidence???

From: Bow
Topic: 9784  Message: 9792

Well, hasn't that always been a problem around here, interdepartmental communication.

and Yes, sounds like the perp swallowed the drugs and he is at I10/Gessner at the Hospital there
-----Original Message-----

To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] Galveston Co pursuit

Chase terminated and subject taken into custody at 2:02am.
BW8 northbound just south of I-10.

GC units lost contact with their trunk system. About a 40-mile trip to Texas City tower. If they were part of STAR-Net, it would not be an issue.
AND, everyone would be able to talk to one another.

Hearing HPD calling for ambulance at I-10 and Gessner for subject that may have swallowed some drugs. Could be the perp who was destroying evidence???

Interesting article in Saturday's Chronicle about an interop radio setup. Unfortunately, I could not get the url to copy correctly. But here is the headline:

HOUSTON CHRONICLE
SAT 08/13/05
Section: B
Page: 1 MetFront
Edition: 3 STAR

Working together gets easier for police / New radios let officers from different areas speak directly to each other

Someone, who was identified as Steve Casko, contributed to the story. Steve, can you enlighten us/

Thanx in advance.

Happy Scanning

Would I conceivably be able to pick up the GC system from Southwest Houston (Mission Bend)? I doubt it, but if so, perhaps it's worth adding it in.

From: Myles Barkman
Topic: 9784  Message: 9796

I really doubt it unless you have a commercial 2-way. 25 miles is about the max range you can pick up the local trunk sites on a hand-held scanner with a rubber duck antenna.
One of the better sites with best range is the Houston STAR-Net site simply because of location and height.
The fact that it was night time probably helped with propagation.
If you had a small tower with 800 MHz beam pointed right at them, you *could* increase your chances. But at about 45 miles away, you may only hear them at night and during band openings.

I have been able to receive Galveston with a grove
scanner beam antenna from Fresno,TX. with no problems.
It is on a pole just above the roof of the house
pointed toward downtown Houston. This gives me most
sites on Starnet and Galveston.

I'm now seeing PPD Patrol 1 (6576) on the Starnet site. It sounds like traffic is being patched both ways between the new & old sites. I've also seen ID 27312 and Parks & Landscaping (8112) on the new site,

Sure.

The City of Houston purchased 10 ICRI's and are in the process of getting about 100 or so Star-net radios. I worked with about 80 police and 20 fire depts to get authorization to have them programmed in our radios (and that, by itself, was a huge chore). I have 1 of the radios and 1 of the portable ICRI's, 3 of them are mounted in vehicles, and another one is about to be deployed. The fire dept also has 5. Each "kit" has 2 uhf, 1 vhf, and 1 800 radio with it so it is complete as soon as you pick it up.

Just having a couple of the radios on the street has been a tremendous asset so far. I could not begin to count the number of arrests that have been made by being able to talk to the other agencies in and around Houston. Just 2 weeks ago I caught 2 felony theft suspects from Pearland at 288 and MacGregor (both prison gang members). As soon as we get the rest of the radios delivered instances like that should happen regularly.

We tested a lot of different pieces of equipment, ACU-1000, RIOS, Viper, etc, and chose the ICRI (www.c-at.com for more details). We wanted something that required very minimal training, would be out on the street to be used and not parked in a command van somewhere, and the cheaper the better obviously.

If you have any specific questions I'll do my best to answer them.

Also, relative to Galveston County, it is in the process of being absorbed in to Star-net but still has a way to go.

No problems hearing Mo City talkgroups on the downtown site.
Pasadena, though, is using 2 control freqs, 1 Borgnet and 1 Pasadena.
It appears that the radios are being migrated to the Pasa Borgnet
controller. Perhaps, in a few days, when all radios are transferred to
Borgnet, they will appear on the main Borgnet sites.

The quest continues...

> If you have any specific questions I'll do my best to answer them.

You bet. But, please, remember the KISS Principle.

Just how does the setup work?

And, is this system going to be used by the Fire Departments, too?

And, now for a quick rant:

From what I've heard, this type of system has been available for several years, but, as always, it seems that it takes a bit of motivation for it to be put on line. Or, the links have to be made by the dispatchers. A couple of examples: Several years ago, USSS and HPD Citywide linked, and, today, HPD-1 on Starnet radios. But, what percentage of officers, all agencies, know how to use it, or even knows it exists?

For example, just how many times has an HPD unit been dispatched to provide communications between county units and Fox?

What's up with Community VFD?
I thought they went to UHF to get away from using STAR-Net.
It looks like they are still using STAR-Net 11856 for dispatch and 11920 for
TAC.

From: Myles Barkman
Topic: 6137  Message: 9810

Looking at the control data stream for the Pasadena STAR-Net site on
868.8625 MHz.
Now it indicates connect tone 83.72 Hz which falls more in line with most
STAR-Net sites although several are also using 105.88 Hz.
It also indicates that the alternate control channel is 868.6125.
What is interesting is that the ALIAS is showing up as "MC" which is
Missouri City.
Guess there is still some more tweaking to be done.

Just looked at the data on the old Pasadena system, using 868.3625 MHz.
Wondered what the alternate control channel might be and noticed that they
are showing 868.8625 MHz. So if the old system goes down (or goes away),
any users of the system should switch right over to the STAR-Net site.
It does not indicate any ALIAS ID programmed.

So the only way that a Pasadena unit's radio may not work, is if the old
system went down, and the alternate control channel 868.6125 were the active
control channel.
Maybe that's how they are going to catch the few radios that missed
reprogramming.

>
> Just how does the setup work?

You hook the two radios in to the box with supplied cords (actaully up to 4
radios and 1 phone). Turn each radio to the "channels" you want patched
together, then turn the box on. You can actually break them down in to different
"groups" if you want, for example hpd 5 and SO-1 patched using 2 radios and 2
ports, and HFD-1 and MA-1 patched using 2 more radios and 2 more ports. You
can also hook 2 boxes togehter using the phone ports for each one. I think
I've passed the basic scope of your question though.

>

Absolutely.

Or, the links have to be made by > the dispatchers.

There are systems like that as well. Tons of them are out there.

A couple of examples: Several years ago, USSS and HPD
> Citywide linked, and, today, HPD-1 on Starnet radios. But, what
> percentage of officers, all agencies, know how to use it, or even knows
> it exists?
>
Not many, but some.

> For example, just how many times has an HPD unit been dispatched to
> provide communications between county units and Fox?

Tons, but there are more reasons than might come to mind behind that, most
notably when the other agency switches to "HPD-1" they lose their dispatcher.
Also, the audio quality is bad. Some don't know how to find HPD-1 in their

radios. There is also a Star-net TG "HPG Fox" that is their own TG in the 800 radios in the 2 newer helicopters. Those are very poor helicopters and they pilots hate to fly them so they aren't in the air as much.

Steve

"Incompetents invariably make trouble for people other than themselves."

Hearing P25 on 451.975 MHz. Just sounds like some regular business.
This freq is also used by Cy-Creek VFD, Aramark, and possibly others.
Anyone else catch business band P25?

Hearing much of Pasadena's normal talkgroup activity on STAR-Net Site 23
with control channel 868.8625 MHz. Some of the dispatch talkgroups are
still being copied on the old (non STAR-Net) system. Still hearing PD folks
using private calls and Scada on the old system as well.
South Houston and Deer Park PD appear not to be coming through on the
STAR-Net sites.
Don't know if they have yet to be reprogrammed or what.

Fire somewhere along FM2004 in Hitchcock area.
Road is closed somewhere around I-45 area.
Believe this is a meth house with barrels involved.
Causing some headaches down there.
Ops on Hitchcock FD talkgroup 60720.

That's just my info saying it was an LEA, that gave addresses on the west side of town. So it could be an LEA over there, or it could be one of those countywide or federal groups.

I could not find anything on their website.
Maybe you could make a suggestion to them that other agencies in the county
do it.

TG 9008 is HCSO Dispatch 4, so yes that would be the west side, but
that has been ID'ed for years.

Yeah, you let the cat out of the bag now.
Many of the new Pasadena talkgroups for PD and FD are in the 33000 talkgroup block.
I guess the city of Houston does not plan on being PFD STA1.
Still working on figuring out what some of the new PD groups are.
Here's a heads-up on the talkgroup names that are new:
PFD STA1
PFD STA1
PFD STA1
PFD STA1
PFD STA1
PFD STA1
PFD STA1
PFD STA1

FIRE TAC 1
FIRE TAC 2
FIRE TAC 3
FIRE TAC 4
FIRE TAC 5
FIRE TAC 6
ARSON 2

# 9846. Re: [HoustonScan] Pasadena star-net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-19 22:23:45 UTC
From: Myles Barkman
Topic: 9842  Message: 9846

Oh yeah, forgot to mention that a couple more channel from the old Pasadena system (3536) have been moved over to the Pasadena STAR-Net site (2318-23). The complete list of channels on the new system now are:
866.1125
866.3625
866.6125
866.8625
867.1125
868.6125 alternate control
868.8625 primary control

This leaves 5 channels for use by the old system. Don't know if this will hang around for units to retain private call capability or if they will activate private call capability on the new STAR-Net site so that they can retain some private call usage.

# 9847. Pasadena system

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-21 01:05:23 UTC
From: Myles Barkman
Topic: 9527  Message: 9847

Looks like Deer Park, South Houston, PISD PD and SCADA (data) are the only
folks left using the old Pasadena system.
I haven't even heard any private calls on the system lately.
Most Pasadena users are now using the STAR-Net site.
Perhaps the rest of the users will follow next week with more reprogramming.
I suppose Pasadena had priority.
I have updated my STAR-Net list to include many of the Pasadena talkgroups
being used.
http://home.houston.rr.com/freqzone/freqs/star-net.html

I have also updated my Pasadena system list to show who is left and the 5
frequencies being used for it.
http://home.houston.rr.com/freqzone/freqs/pasadena.html

I also uploaded my general Houston frequency list for any changes that I
might have made lately.
http://home.houston.rr.com/freqzone/freqs/hou_freq.html

Does anyone know if there have been any changes to repeaters used by
Aldine/Eastex/Westfield VFD and HCESD-1?
I only hear the dispatch repeater of 453.625 now.
Are 453.6875, 453.775, and 461.800 MHz still being used?

This had been posted several times in the past, but I'll clarify it since there had been some changes:

This is for the East Harris County channel plan.

1 - Dept's Primary CH
2 - Tac2 - 154.370, 167.9 Sim
3 - Tac3 - 151.100, 156.7 Sim
4 - Tac4 - 154.310, 156.7 Sim
5 - Tac5 - 155.715, 203.5 Sim
6 - Tac6 - 154.445, 136.5 Sim
7 - Tac7 - 151.655, 156.7 Sim (For PR's and other Non-Critical Ops, Used by permission from HCEC license)
8 - Tac8 - 154.280, 146.2 (Tx only) Statewide High Band Fire Mutual Aid
9 - Fire9 - 154.370/159.915, 167.9 (Sheldon & Channelview)
10 - Fire10 - 151.100/159.195, 156.7 (Crosby VFD & ESD#5)
11 - Fire11 - 154.310/153.890, 156.7 (Highlands VFD)
12 - Fire12 - 155.715/151.460, 203.5 (Cloverleaf VFD & Northchannel EMS)
13 - Fire13 - 154.445/150.775, 136.5 (Huffman VFD)
14 - Fire 14 - 154.250 , 136.5 (Baytown FD)
15 - Fire 15 - 154.755/155.310, 146.2 (Barber's Hill/Mont Belvieu FD)

For Aldine/Eastex/Westfield/HCESD-1 it is:
Fire 6/EMS 2 - 453.625/458.625, D043 (Page on 155.385)
Fire 7 - 453.775/458.775, 210.7
Fire 8 - 453.6875/458.6875, 114.8
Fireground 1 - 453.775, 210.7 (simplex)
Fireground 2 - 453.6875, 114.8 (simplex)
Interior 1 - 453.3125, 127.3 (4W portables) simplex
Interior 2 - 458.3125, 141.3 (4W portables) simplex
EMS 3 - 461.800/466.800, 88.5
EMS 4 - 461.800, 88.5 (simplex)

Atascocita VFD is on STAR-Net 20944
Southlake EMS is on STAR-Net 19856

You can see more info on these and other agency freqs here:

Lots of rain moving southwest through Louisiana towards Beaumont. Could impact us late tonight if it holds together, or at least areas to the east and south of Houston.
Weather service forecast does not mention this at all so we will see.

# 9857. Re: [HoustonScan] Pasadena star-net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-22 04:09:30 UTC
From: Myles Barkman
Topic: 9842  Message: 9857

I don't know what 10 channels you are referring to on RR.
It shows 7 frequencies for the Pasadena STAR-Net site (site 23):
866.1125, 866.3625, 866.6125, 866.8625, 867.1125, 868.6125, 868.8625c
This is what Police/Fire/EMS/Public Works is using. You may hear some of
the talkgroups used on surrounding sites as well (Houston, Baytown,
Pearland) depending on what sites individual radios are affiliating to based
on signal strength.

If you want to listen to South Houston, Deer Park, or PISD Police, you need
to listen to what is left of the old Pasadena system on:
867.3625, 867.6125, 867.8625, 868.1125, 868.3625c
These agencies may be in the process of being reprogrammed soon.

Hi Myles,

Here is what I have for 3536 aka "Pas-a-get-down-dena" ...

*Site, LCN, Control, Listen, Lockout, Frequency, CTCSS, DCS, "Label",
First, Last, "Notes"
1,604,0,0,0,866112500,0.0,0,"",20050806184845,20050806233701,"unused"
1,614,0,0,0,866362500,0.0,0,"",20050806184840,20050806233651,"unused"
1,624,0,0,0,866612500,0.0,0,"",20050806184839,20050806233650,"unused"
1,634,0,0,0,866862500,0.0,0,"",20050806184837,20050806233643,"unused"
1,644,0,0,0,867112500,0.0,0,"",20050806184836,20050806233820,"unused"
1,654,0,0,0,867362500,0.0,0,"",20050806184835,20050821045232,""
1,664,0,0,0,867612500,0.0,0,"",20050806184830,20050821045229,""
1,674,0,0,0,867862500,0.0,0,"",20050806184826,20050821045233,""
1,684,0,0,0,868112500,0.0,0,"",20050806184819,20050806233725,"unused"
1,694,1,0,0,868362500,0.0,0,"",20050806184810,20050821045229,""
1,704,1,0,0,868612500,0.0,0,"",20050806071816,20050820225046,""
1,714,1,0,0,868862500,0.0,0,"",20050806184808,20050820225113,""

I'm showing six channels still active over the weekend.

Please delete channel 868.1125 as it appears unused - based upon the
"last" column in the table above. Please add channels 868.6125 &
868.8625. Hope this helps ... wonder how long this configuration will last.

# 9859. Re: [HoustonScan] Pasadena star-net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-22 07:12:02 UTC
From: Myles Barkman
Topic: 9842  Message: 9859

I think what's throwing you off is that the 868.3625 control channel is reporting multiple alternate control channels, two of which are part of the new STAR-Net system.
It's showing 868.1125, 868.6125, and 868.8625 as alternates for the 3536 system.
But if you look at each system, you will see that 3536 is only using 867.3625, 867.6125, and 867.8625 for voice traffic.
I will have to check during heavier usage to see if 868.1125 gets used.
The SCADA TG 7280 runs almost continuously so it wouldn't take too much more traffic to see what happens.
But it could explain why I've seen some of Deer Park and South Houston's talkgroups on STAR-Net if they've been forced there during "busy" times on the 3536 system if that's possible.

# 9860. Starnet 45424

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-22 11:58:48 UTC
From: bpckty1
Topic: 9860  Message: 9860

Heard testing along SH-6 on talkgroup 45424.
I wonder to which agency they will be assigned?

Ah, the quest...

# 9861. Radio Scanner Antenna Installation

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-22 12:27:10 UTC
From: Parker, Melinda
Topic: 9861  Message: 9861

Can anyone recommend a business that installs antenna's on vehicles for my portable scanner

I thought I saw voice activity on the latter two but no activity (voice
or otherwise) for 868.125. I'm tracking a different system now so I'll
have to come back to it later. It does get busy on a Saturday night.

# 9864. Lifeflight question

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-22 15:09:33 UTC
From: Marvin Suggs
Topic: 9864  Message: 9864

Is Lifeflight heard only on the downtown site? Or when they're in flight it's heard on all sites (due to altitude)?

Thanks,
Marvin

They are always heard on the Houston (downtown) site but can occasionally be heard on other sites.
It's not necessarily the helicopter radio that is causing this, I propose that other folks with 2-way radios are affiliating on other sites and that is one reason it is heard on other sites.
But you can't ever rely on hearing them if you listen to anything other than the Houston site (unless you are using a SmartZone radio).

# 9867. More Pasadena

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-22 16:09:27 UTC
From: Myles Barkman
Topic: 9867  Message: 9867

One more frequency has been moved from the old system to the new system-867.3625 MHz.
So now the STAR-Net site has eight channels and the old system only has four channels.
The only non-Pasadena talkgroup I've seen affiliate to the Pasadena STAR-Net site is 8912 Galena Park PD.

Thanks Myles,
What keeps Lifeflight from activating all the sites when they are in flight?
It seems like the signal would be evenly spread out, so all towers would
have the same signal. strength. Wouldn't the same thing happen if you used a
cellphone in a airplane?

I think a radio can only affiliate to one site at a time. Someone
correct me if I am wrong.

# 9872. Re: [HoustonScan] Lifeflight question

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-23 22:09:42 UTC
From: Myles Barkman
Topic: 9864  Message: 9872

Most of the sites use a completely different set of frequencies so as not to cause interference to each other.
If a user on STAR-Net is using their radio in true SmartZone mode, the radio will internally check the signal strength of up to (I think) eight sites and pick the one that has the highest signal which is called RSSI.
In Lifeflight's case, most of the time, downtown Houston will have the highest signal.
They can be heard on other sites at times which could be due to them being close to one of those sites, or simply because someone else's 2-way radio which is listening to Lifeflight is listening through that site.
If there were enough people listening to Lifeflight on 2-way radios spread out across the area, with at least one person affiliating to each tower, you could hear Lifeflight on every site. But that is only as long as someone is still listening through that site.
If all the folks on one site turn their radios off or switch to another site, then you won't hear them on that site anymore.

As far as cell phones go, I'm not sure how much of a problem using your cell phone at altitude creates now that most folks are using digital signaling. Perhaps it was more of an issue when phones were analog.

Quite a few folks were using their cell phones in those planes during 9/11.

The bigger problem someone on a cell phone at high altitude faces is that they will most likely reach a cell site hundreds of miles away instead of directly below them.
If you notice the antenna bays on cell phone towers, they are tilted downwards slightly towards the ground where people typically use their phones. The system wasn't really meant to be used by folks in planes.
I bet the airphone antennas are different in that regard but I don't have any information on that.

# 9873. Re: Starnet 45424

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-24 00:38:59 UTC
From: bpckty1
Topic: 9860  Message: 9873

Found these talkgroups to be active in the Mo City area.
They appear to be public works related.
Perhaps these are the new talkgroups that were
previously Type Ion the Mo City system:

45296 Activity
45328 Public Works
45360 Public Works
45424 Activity

# 9874. New Ham Radio Test is out!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-24 01:34:15 UTC
From: Chris Boone
Topic: 9874  Message: 9874

The new amateur radio test is here. A few changes have been made.
The new test has been designed so that the same test can be given for all
license classes. To qualify for the higher classes of license, all you have
to do is score better on the test. This makes things so much simpler for
VE's.

I have included a copy of the new exam.
==========

Please PRINT (that means no squiggly lines)

YOUR NAME (what they call you)
_____

ADDRESS (where you live)
_____

BIRTH DATE (when you were born) _____

EXAM INSTRUCTIONS:

Make a circle (one of these round things O ) around the letter of the best
answer! This is so we know what your answer to the question is!

1. You TALK into a microphone with your _____.

A. Hands
B. Feet
C. Toes
D. Mouth
E. Armpits

2. When you talk into a microphone, you talk into _____.

A. the front
B. the back
C. the top
D. the bottom
E. the wire

3. "HEADPHONES" are worn over the _____.

A. Knees
B. Eyes
C. Toes
D. Ears
E. Lips

4. What do you do with the AC line cord coming out of a power supply?

A. Hold it in the air to pick up signals
B. Pull on it to start the motor
C. Talk into the plug to get real "skip DX"
D. Hook it to your antenna
E. Insert the plug into a source of power

5. A "two meter" radio is: (NOTE: There are TWO correct answers to this question...look at the last two...sshhhh)

A. twice as strong as a one-meter radio
B. two one-meter radios in series
C. a CB with two meters on the front panel
D. a good doorstop
E. a monoband radio

6. A "ten-foot mast" is about how long?

A. Three meters
B. Ten pounds
C. Two meters
D. Tree-top tall
E. Same length as basketball hoop is high

7. A "Triband antenna" is made to work on how many bands?

A. 1
B. 2
C. 3
D. 10
E. Try it on any band!

8. The "Marconi" antenna is named after:

A. Marconi
B. Mantovani
C. macaroni
D. Dean Martin
E. martini

9. What colors of DIODES can you buy at a Radio Shack store?

A. Red, blue and black
B. Red, yellow and green
C. Orange and brown
D. I am color blind so this is a discriminatory question and I should automatically get a waiver on this question.
E. I have no intention of ever using DIODES, so don't care what color they are.

10. What color of SLURPEE can you buy at 7-11?

A. Red, blue and black
B. Red, yellow and green
C. Orange and brown
D. I am color blind so this is a discriminatory question and I should get another waiver on this question. I now have two questions right.
E. All the above

11. You have just installed your new mobile rig in your vehicle and you are still parked at the curb, you need to pull out into traffic and you are talking to another station, so:

A. You put down the mic long enough to signal that you intend to pull away from the curb
B. You keep on talking and just pull out in traffic
C. You open your left rear door to signal that you want to pull out in traffic, while calling CQ DX on the repeater
D. You install a light bulb at the top of your antenna so that it will flash when you are talking on the radio and people will then know to let you out

END OF EXAM.

YOUR SIGNATURE (slap your tag here)

==========

SCORING:
Get ALL of them and you are a VE!
Get more than half of them correct and you get an EXTRA!!!!
Get at least a third of them right and you get a GENERAL!!!!
Get more than TWO right and you get a TECHNICIAN!!!
Get only ONE right? No more Novices so go back out in parking lot and study another five minutes. When you are done, come back in and try again. You'll do better.....
Get NONE right? Back to 27 MHz CB.

There is no more reliable means of communication than amateur radio operators using cw. I agree that it is more cumbersome, and that there are many other preferred modes out there (I, myself use them).

But when the chips are down, and no other means of communication is possible, cw will always be there to punch through. It is a travesty for amateur radio operators to lose this unique facet that has been the cornerstone of ham radio for decades.

# 9885. Re: [HoustonScan] Re: New Ham Radio Test is out!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-24 12:22:02 UTC
From: William Teed
Topic: 9874  Message: 9885

In my opion this is the best thing that has happen to this hobby in a long time.
I kn ow, besides myself that their are other who have been stubbed along the way of upgrading to:
And to the cry babies that have nothing better to do then complain about this they need to get a crying towel and get on with their so called life cause it's about to change and their is nothing they can do to stop it.

Thomas <bayoubuzzard2000@...> wrote:
There is no more reliable means of communication than amateur radio
operators using cw. I agree that it is more cumbersome, and that there
are many other preferred modes out there (I, myself use them).

But when the chips are down, and no other means of communication is
possible, cw will always be there to punch through. It is a travesty
for amateur radio operators to lose this unique facet that has been
the cornerstone of ham radio for decades.

Not such good press for the amateur community in Houston, is it?

Homeowners associations have far too much power already.

# 9890. Re: New Ham Radio Test is out!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-24 16:00:12 UTC
From: kb5axx
Topic: 9874  Message: 9890

Change is good, indeed. But until something that's more reliable than CW comes along, hams would be remiss to not keep it. I think it was a mistake for the Navy to abondon it. Sure, there are faster, more secure ways than code, but when all else fails (and it can!), CW is the ultimate backup mode of communication.

I am thankful that a no-code license is available. My lovely xyl has a ticket because of that. Since she has no desire to get on HF, it suits her needs just fine. But for those who wish to use HF, and claim to be "ready" for emergency communications, then CW is an absolute must.

# 9891. RE: [HoustonScan] Re: New Ham Radio Test is out!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-24 17:26:41 UTC
From: Scott Royall
Topic: 9874  Message: 9891

You just demonstrated why the FCC no longer considers amateur radio a necessary part of emergency communication. Hams have failed to uphold their end of the deal. When modern emergencies occur, gigabytes of information need to fly NOW. NONE of the modes of transmission hams have are capable of measuring up to the need. Your statement sadly stopped being relevant sometime in the late 70's, and the ham community has lacked the vision to innovate and regain the respect of the FCC. No wonder the chairman recently made the above remark and is so sympathetic to things like BPL; hams have basically reduced their own service to merely a hobby. Why should the FCC shield a hobby?

I am sorry, Thomas. I don't mean to jump on you personally. I know a few hams still sincerely care about WHY their hobby was created by Congress. Just not enough to restore its value to the broader population. By the time an emergency reaches the point where CW and tubes regain any contributory value, most of the US will already be dead. Too little too late. There are better ways of communicating in an emergency, just ask the military. Hell, even the lowly cell phone, while badly wounded, grit its digital teeth and muscled through 9/11 more effectively than amateur radio! Sheesh, amateur radio has become little more than a club of grumpy old men.

Subject: [HoustonScan] Re: New Ham Radio Test is out!

There is no more reliable means of communication than amateur radio operators using cw. I agree that it is more cumbersome, and that there are many other preferred modes out there (I, myself use them).

But when the chips are down, and no other means of communication is possible, cw will always be there to punch through. It is a travesty for amateur radio operators to lose this unique facet that has been the cornerstone of ham radio for decades.

In my opion this is the best thing that has happen to this hobby in a long time.

I kn ow, besides myself that their are other who have been stubbed along the way of upgrading to:

And to the cry babies that have nothing better to do then complain about this they need to get a crying towel and get on with their so called life cause it's about to change and their is nothing they can do to stop it.

Date: 2005-08-24 17:32:13 UTC
From: Scott Royall
Topic: 9880  Message: 9893

Well, the article was wrong on that account. Federal courts have ruled Amateur Radio exempt from deed restrictions.

Not such good press for the amateur community in Houston, is it?

Homeowners associations have far too much power already.

# 9894. Pasadena Emergency Services

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-24 18:32:57 UTC
From: John Stokes
Topic: 9894  Message: 9894

Hello All,

We all know that Pasadena has made changes to there radio system the question I hvae is whay do I need to do the get my trunk tracking scanner to working again to pick up the emergency services.

It seems that their might have been some additions and deletions of the some of the 800mz frequencies that the are trucking on?? Although Im not sure of that.

If what I think is true does any one have all of the new 800mhz freq's that they are trucking on?

I would like to list my wesite that I have had for a while that was pretty accurate til now, Please look at it a see if any necassry changes are needed.

My Bio,
I am a Pasadena firefighter and seems Im the go to guy when it comes to programming the personal scanners for the guys in the department. Im just trying to get hooked back up with the right freq's to get everyone back up to speed. I program the Bearcat and Pro Scan scanners with my computer and will for the older scanners take the time to hand program.

Thanks in advance for any info that will help accomplish this task.

# 9895. 75th Pasadena Fire Department Parade

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-24 18:39:53 UTC
From: John Stokes
Topic: 9895  Message: 9895

Take the kids to watch the parade this Saturday 8/27. It will have all of the Pasadena Fire department equipment to show. It will start at the old WalMart on Fairmont and end down at Pasadena convention center. There the trucks will be displayed for kids and grown ups to look at and climb on. All kinds of fire fighting type games for the kids. Great time to be had, watch the local paper for more details or stop any of the staions and talk to the firefighters.

Look up Myle's website at
http://home.houston.rr.com/freqzone/freqs/freqs.html and click on STAR-
Net. This is the new system that Pasadena is on (Pasadena only for
now). Deer Park and South Houston are still on the old system as far as
I know (I am not within listening distance!).

# 9906. RE: [HoustonScan] Re: New Ham Radio Test is out!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-25 02:46:03 UTC
From: Tom Ashworth
Topic: 9874  Message: 9906

My first knee jerk reaction to what the FCC had done to the code requirement was not printable. All I could think of was ?how could the FCC do this after all I went through??

I have been a VE, I like CW, and I really like CW contests. A lot of people don?t, and the code requirements probably did stymied potential new hams that wanted to explore other areas of the hobby that did not use CW. However, as KB5AXX said, CW is more likely top be heard in lousy conditions. It is certainly not as fast as the Internet, but without a portal, that computer doesn?t do much. A good example of this was the Indian hams in the Andaman Islands during the tsunami. They were the only means of communication. Not internet, just hams, using voice and CW.

Enough of my soap box for now. Have a good evening.

Tom Ashworth, N5EA

Subject: [HoustonScan] Re: New Ham Radio Test is out!

Change is good, indeed. But until something that's more reliable than CW comes along, hams would be remiss to not keep it. I think it was a mistake for the Navy to abondon it. Sure, there are faster, more secure ways than code, but when all else fails (and it can!), CW is the ultimate backup mode of communication.

I am thankful that a no-code license is available. My lovely xyl has a ticket because of that. Since she has no desire to get on HF, it suits her needs just fine. But for those who wish to use HF, and claim to be "ready" for emergency communications, then CW is an absolute must.

Anyone for a outta the blue question? I have been asked by someone from an OEM board what "WE" in Texas use for identifiers for mentally disturbed persons. i.e. 10 codes. Since almost every department around here has it's own I thought I'd ask and compile a list. This is in response to DHS survey about "plain language transmissions." Thanks for your help. Mark

# 9910. Re: New Ham Radio Test is out!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-25 15:24:48 UTC
From: Thomas
Topic: 9874  Message: 9910

My statement specifically indicated that there is no more *reliable*
means of communicating than using code on CW. CW travels through QRN &
QRM better than any other mode, regardless of the band, or band
conditions. "Reliable" does not mean faster or more convenient; it
means certain, dependable, and capable.

While I do take issue with several other statements made, it was all
irrelevant to the point I was making initially ☐ so I'll give it a
pass for now.

From: Scott Royall
Topic: 9874  Message: 9912

Ton, first and foremost, this is a public forum. You are free to express your views as long as Myles allows it.

To be honest, I think you touched on the most fundamental reason why many hams don't want CW dropped. They had to learn it so they feel it should be required of new hams forever. Doesn't that seem rather childish when viewed under full light of day? It's a lot like requiring new pilots to train in Jenny bi-planes, isn't it? Yes, CW is easier to discern in noise than is voice, but there are now newer digital modes usable in signal levels a human can't even detect. Of course hams don't have these new modes yet, but they do exist.

The South Pacific tsunami was a unfortunate example to use to reinforce your case for CW. In the view of most governments in the region, that was also a communication disaster because they thought they had no tool to forewarn their public with. It was a bitter irony when they later discovered that such a tool was available already. I don't know about CDMA, but it turns out that GSM providers are set up to send messages to every phone monitoring any of their towers in a few minutes. The limiting factors are just typing in the master message and shooting it downstream to the transmitters. Think about how many lives a simple "TSUNAMI ALERT: FIND HIGH GROUND NOW!" could have saved. At least that's the view of many governments in that region, and what they want to do next time.

Actually, your example brings to mind two realities about disaster comms. First, advanced information of a pending disaster is always more valuable, and CW has never helped there. Second, the entire communication landscape has radically changed within our lifetimes. Do you realize that most people today walk around with little computers in their pockets or purses? We call them cell phones, but they can do things no phone ever dreamed of.

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Tom Ashworth
Sent: Wednesday, August 24, 2005 9:46 PM
To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] Re: New Ham Radio Test is out!

My first knee jerk reaction to what the FCC had done to the code requirement was not printable. All I could think of was "how could the FCC do this after all I went through?"

I have been a VE, I like CW, and I really like CW contests. A lot of people don't, and the code requirements probably did stymied potential new hams that wanted to explore other areas of the hobby that did not use CW. However, as KB5AXX said, CW is more likely top be heard in lousy conditions.

It is certainly not as fast as the Internet, but without a portal, that computer doesn't do much. A good example of this was the Indian hams in the Andaman Islands during the tsunami. They were the only means of communication. Not internet, just hams, using voice and CW.

Enough of my soap box for now. Have a good evening.

Tom Ashworth, N5EA

Subject: [HoustonScan] Re: New Ham Radio Test is out!

Change is good, indeed. But until something that's more reliable than CW comes along, hams would be remiss to not keep it. I think it was a mistake for the Navy to abondon it. Sure, there are faster, more secure ways than code, but when all else fails (and it can!), CW is the ultimate backup mode of communication.

I am thankful that a no-code license is available. My lovely xyl has a ticket because of that. Since she has no desire to get on HF, it suits her needs just fine. But for those who wish to use HF, and claim to be "ready" for emergency communications, then CW is an absolute must.

# 9913. RE: [HoustonScan] Re: New Ham Radio Test is out!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-25 18:39:17 UTC
From: Scott Royall
Topic: 9874  Message: 9913

Please see my reply to Tom. Just because hams haven't pioneered the newer digital modes doesn't mean they don't exist. A few even show how obsolete CW really is in the face of challenges like BPL interference.

-----Original Message-----
From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Thomas
Sent: Thursday, August 25, 2005 10:25 AM
To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] Re: New Ham Radio Test is out!

My statement specifically indicated that there is no more *reliable* means of communicating than using code on CW. CW travels through QRN & QRM better than any other mode, regardless of the band, or band conditions. "Reliable" does not mean faster or more convenient; it means certain, dependable, and capable.

While I do take issue with several other statements made, it was all irrelevant to the point I was making initially - so I'll give it a pass for now.

Subject: [HoustonScan] KHOU Website Login Information

For KHOU's website:

Login: mickey.mouse@disneyworld.com
Password: mickey

No spam in my email box!

You can always try a fake email - this works as long as they don't send you a confirmation email or password to that address. All the computer know is if the address has an "@" symbol and a .com .net etc.

Now read with no fear!

Celtic§torm

Work smart, not hard

PS I need a computer job!!!! AAS Networking; some experience in support (hardware & software) and management; looking for entry level networking but am open to anything. Thanks

John:
What time on Saturday I plan on bein their with my grand babie and I know they will like something like that.

John Stokes <captstokes@...> wrote:
Take the kids to watch the parade this Saturday 8/27. It will have all
of the Pasadena Fire department equipment to show. It will start at
the old WalMart on Fairmont and end down at Pasadena convention
center. There the trucks will be displayed for kids and grown ups to
look at and climb on. All kinds of fire fighting type games for the
kids. Great time to be had, watch the local paper for more details or
stop any of the staions and talk to the firefighters.

John Stokes

Hey... let's forget the flame-war. It's not worth the time. I only wanted to make a statement about CW, and its value to the HF operator. If you want to disagree, then so be it. Believe me, I don't lose any sleep over anyone here -- and I certainly hope nobody loses sleep over anything I say. It's really not that important.

Why back off your postion? I worked hard for my license and respect the
privaledges it provides. If the HF privaledges are turned over to those who dont
work for it, then it becomes no more than the glorified, insane chaos of the
Citizen's Band of the 70's. Have you heard the trash that passes for
conversation on the band now?

I am not going to take up a flame war. I also am not going to let the
ignorant, illogical anologies being thrown around this usually inteligent and
interesting newsgroup pass unchallenged!

The BCD396T from Uniden seems to be the newest and best one I have found. I am still using the old Pro-90 from Radio Shack. This new scanner I am seriously considering getting it. It even has fire tone-out capability. It also uses the Trunktracker IV tech. From scannermaster.com, it is listed as $515.00. Does anyone have it yet??

Niko

# 9928. RE: [HoustonScan] New scanner from Uniden

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-26 00:00:23 UTC
From: Michael W. Jones
Topic: 9927  Message: 9928

I have had one since the early part of July. Personally, I love it! I have yet to even scratch the surface of it's capabilities, and have yet to even get it 40% full (and that's with a good chunk of Harris County systems in it).

APCO-25 is a nice-to-have for traveling, but here locally, only Johnson Space Center and the downtown Federal Detention Center are using it (although JSC is reportedly encrypted, and I'm just barely out of range of the Detention Center with the duck antenna here at the apartment).

Close Call is spotty at times, but works well in most cases. I had a trucker key his CB while alongside, and it didn't alert (this could have been that the external vehicle antenna I use is only rated for 100MHz and above). Other times, it will alert on data, even when I have data skip on.

Otherwise, it's gotten me some good hits.

The other complaint is trying to work some functions single handed while in a vehicle, since it requires some dexterity to manipulate the function button and the control knob.

Otherwise I highly recommend it!

Mike Jones
Heights

# 9929. RE: [HoustonScan] Re: New Ham Radio Test is out!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-26 00:24:46 UTC
From: Scott Royall
Topic: 9874  Message: 9929

Thank you, William. There is no reason to get crude and ugly about the matter.

I get the feeling that some hams use the CW test in lieu of other more controversial criteria. The ability to copy CW is only dubiously linked to intelligence. Hell, even my dog could probably learn to copy CW since it is really a rote skill (and I wonder how many reading this even understand the term). I fear the CW requirement has become not much more than a fraternal rite of passage. Those with licenses would do well to remember their hobby was originally created by Congress to provide an actual service. Thus, the best way to preserve the hobby is by finding new ways to keep the service aspects relevant. In terms of technology, we are about to the point of man-portable HF. Certainly, my 706 Mk II G could do it on wheelchair power if the crud who stole my van hadn't pawned my mini-Tarheel for drugs. My point is, we can offer much more to emergency managers than what CW can support.

do to stop it.

Fortunately, somthing is being done about it. Formal commentary is being made to the FCC from ham radio operators in the United States using quotations such as the one appearing above.

Well, some of us do get weary of reading about the Stink-adena trunking system. There's so much more RF floating around Houston.

The other complaint is trying to work some functions single handed while in a vehicle, since it requires some dexterity to manipulate the function button and the control knob.

Otherwise I highly recommend it!

The BCD396T from Uniden seems to be the newest and best one I have found. I am still using the old Pro-90 from Radio Shack. This new scanner I am seriously considering getting it. It even has fire tone-out capability. It also uses the Trunktracker IV tech. From scannermaster.com, it is listed as $515.00. Does anyone have it yet??

It's not like I'm recommending trying to change settings while a vehicle is in motion. The Function button is on the side, and has to be held down like a PTT button, while turning the selector knob to select a system if manual scrolling. Changing the volume is easily done single handed (push down and release selector, turn knob.)

You also have to understand, I use a dash-mount bracket, which mounts the scanner just to the right of the stereo in my SUV.

Overall, I give the scanner an 8.5 out of 10.

I do not have any fire tones in it (Two reasons, I'm not a member of a VFD, and Houston is about the only thing I can hear, and the paging frequency I understand they use has been silent). If I had some that worked (supposedly from the reports in the discussion forums, it will not work with paging on trunked systems - sorry those of you with pagers on StarNET) I would definitely give it a go - I live across the street from HFD Station 6, and hear the trucks at all hours.

Date: 2005-08-26 03:52:03 UTC
From: elentz1
Topic: 9925  Message: 9936

I have both the PRO-97 (which is on sale for $179.95 now) and PRO-2055 and can say they are nice radios. I was able to program every control and backup control channel for each Starnet tower into each bank of the radio radio and then selected groups for each bank. I have one bank of all schools, one for Non Harris County law enfourcement, one for Harris County Law Enforcement, etc. It works out very well and you can drive all around the county and the radio will monitor the nearest towers for the talkgroups you have selected.

It's not a Uniden and I have successfully avoided buying a Uniden radio for the past 8 or 10 years.

For all you folks that think Pasadena is the dirty place to live in the County. Have news for ya, go to the TNRCC website and check out where the highest pollution is in the county..... Always remember the predominately southeast winds and Texas City. Goodyear and Texas Petrochemical are in Houston.

Date: 2005-08-26 04:22:14 UTC
From: Chris Boone
Topic: 9937  Message: 9937

The digest came on at 139KB....mostly because people kept replying to my original thread...and DIDN'T bother to delete the message.....MANY time...

PLEASE people, USE CUT and PASTE when replying....Im on broadband so there is no time issue...but for those on dialup, it is a PAIN.....and wasteful...Im glad you found the new ham test funny (and sobering in some cases....I know some Extras who probably couldn't pass THIS test! Really!)....but on replying, can you please cut it????

On the digest mode (which I use now), it is a royal pain having to skip past all the quoting, etc....again, its not a big issue for me but others may have problems...please think of your fellow net user.

BTW I do CW...but not that much.....I often have debated whether CW should stay in the han field....but then I passed my 13wpm at 14 yrs old.....and if I can do it, anyone can......does keeping a CW test in ham radio help keep the ranks up? Nope.....just listen on 20 or 80 mtrs....some freqs are worse than CH19 CB...what I WOULD like is a real TEST...not one that has all the answers in the public domain that can be memorized....thats dumming things down....noone learns from that....I passed every ham test by LEARNING it...I also did the same with my commercial tickets...but it probably wont happen..things have changed (and not for the better in my opinion).....and yes I still hold an Advanced class...never saw the need for my having an Extra....(but could have easily passed the 20wpm test years ago, not sure if I could now without practice)

My 2 cents on the soapbox..

Chris

Well said Scott.

Charles Crook KA5UWU

Thank you, William. There is no reason to get crude and ugly about the matter.

I get the feeling that some hams use the CW test in lieu of other more controversial criteria. The ability to copy CW is only dubiously linked to intelligence. Hell, even my dog could probably learn to copy CW since it is really a rote skill (and I wonder how many reading this even understand the term). I fear the CW requirement has become not much more than a fraternal rite of passage. Those with licenses would do well to remember their hobby was originally created by Congress to provide an actual service. Thus, the best way to preserve the hobby is by finding new ways to keep the service aspects relevant. In terms of technology, we are about to the point of man-portable HF. Certainly, my 706 Mk II G could do it on wheelchair power if the crud who stole my van hadn't pawned my mini-Tarheel for drugs. My point is, we can offer much more to emergency managers than what CW can support.

# 9941. RE: [HoustonScan] New scanner from Uniden

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-26 17:30:22 UTC
From: Scott Royall
Topic: 9927  Message: 9941

My comment was based on the reality that I am basically one-handed.

---

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Michael W. Jones
Sent: Thursday, August 25, 2005 10:08 PM
To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] New scanner from Uniden

It's not like I'm recommending trying to change settings while a vehicle is in motion. The Function button is on the side, and has to be held down like a PTT button, while turning the selector knob to select a system if manual scrolling. Changing the volume is easily done single handed (push down and release selector, turn knob.)

You also have to understand, I use a dash-mount bracket, which mounts the scanner just to the right of the stereo in my SUV.

Overall, I give the scanner an 8.5 out of 10.

I take your comment to indicate that I probably wouldn't want this radio even if I could afford it.

To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] New scanner from Uniden

The other complaint is trying to work some functions single handed while in a vehicle, since it requires some dexterity to manipulate the function button and the control knob.

Otherwise I highly recommend it!

Mike Jones

Subject: [HoustonScan] New scanner from Uniden

The BCD396T from Uniden seems to be the newest and best one I have found. I am still using the old Pro-90 from Radio Shack. This new scanner I am seriously considering getting it. It even has fire tone-out capability. It also uses the Trunktracker IV tech. From scannermaster.com, it is listed as $515.00. Does anyone have it yet??

Niko

# 9942. RE: [HoustonScan] Digest Number 1700

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-26 18:00:28 UTC
From: Scott Royall
Topic: 9937  Message: 9942

To me, 139K isn't even a blip on the radar. I'm fortunate enough to still be able to afford Roadrunner. I am curious, though, about why you switched to digest mode. I don't find it very useful because everything is lumped together, creating the issue you refer to.

Also, I was an echo moderator for years so I know well that editing a message alters its overall meaning and/or impact. That's why I'm loathe to edit other people's words. Yes, you'd think their message has already been read repeatedly, but the nature of the Internet means that assuming anything is risky.

It's a double-edged sword, Chris. I prefer to have the original text kept in the reply because of all the emails I go through. It helps jog my memory. Some like it, some don't -- we all have to deal with it, and people aren't going to change their habits anyway.

Date: 2005-08-26 22:35:35 UTC
From: Myles Barkman
Topic: 9937  Message: 9946

Yeah, what he said...
Actually, my personal preference is to snip posts so that the minimum amount of repeated text is copied so that someone could logically figure out the response, if the response itself does not include enough information.
I would also snip out any crud that Yahoo or anyone else's email program may inject into the message.

As far as folks throwing rocks at each other about CW or email etiquette, I just exercise my (insert deity of choice or select 'none')-given right to use the 'delete' key as I have found in the last two years of being a father, that I have much higher priorities to deal with that to be hall monitor over such matters.
If you get to into personal attacks, being grossly disrespectful, using profanity, or just can't seem to drop it because you feel you will go down with the ship fighting to the end, then I might step in for the good of the group.
Just remember that there are hundreds of folks on this list and that if you have an issue with what someone said, reply to that person.
I have enough dirty laundry (and diapers) to deal with here. :)

According to the 147th, the are not moving...

With the Predators coming to town, they will need some F-16 Support, besides, they decided that with the ship channel, refineries and Johnson Space Center, getting rid of the only fighter squadron with in 400 miles wouldn't be such a bright move.

That is according to personnel at the 147th.. I work down at Ellington and I was talking with some of them yesterday.

There was literally an air traffic jam at Hermann Hospital last night. Numerous medevacs were all coming into the hospital in a short period of time. Life Flight, SkyMed and Critical Air helicopters were all involved. Some helicopters had to orbit briefly waiting for helipad space. Some moved to Hobby and Southwest to clear space and returned later to pick-up their crews. Lots of action on 128.85.

# 9954. Marine radio traffic

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-27 22:17:12 UTC
From: scasko@aol.com
Topic: 9954  Message: 9954

I'm in the process of setting up some radio equipment to be used for interoperability between several city/county/state agencies in the Houston area. Can anyone give me an idea of what Marine band channels/frequencies I should include in the programming? I have 16, 13, 22, 23, and 2 in the 40's (my list is at work). Any other suggestions? (I do plan an outing to the Coast Guard station on Clinton also...)

Also, I have received only 2 requests to see the ICRI equipment that was in the paper last week. 1 deep west side of town, the other Montgomery County area. Anyone else before I set a date/time?

Thanks,
Steve

16 is the haiiling frequency also channel 9 is used to emerceny. I
programmed them all into
my Icom IC-V8000 and I can Recieve and Transmit on the marine bands.

# 9956. PRO-96 programming software comparison

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-27 22:29:10 UTC
From: Jerry Albright
Topic: 9956  Message: 9956

Has anyone done a comparison of the two main (I assume) software packages for programming the PRO-96? I own the Scancat-Lite Plus, but in spite of following all the instructions, it continually drops some of the talkgroups when downloading to the radio. I am considering the Starrsoft package, but would like to know if anyone can comment pros and cons for it.

You could put Ch.21A in there as that is the frequency the Coast Guard uses mainly between themselves. It is not really meant for folks to talk to them on though. That is what 22 is for, or even 16.
But if you want to hear the units doing patrols in the water, or the helos, 21 is good.

Well, I'm not going be able to go far.

Also, can the ICRI just link radios that have predefined channels? Is there no ability to synthesize frequencies on the fly? If not, ICRI might not be too useful in a dynamic emergency where you have to cross-link to some obscure federal agency NOW.

Can you tell I'm re-watching The Peacekeeper? :-)

Subject: [HoustonScan] Marine radio traffic

I'm in the process of setting up some radio equipment to be used for interoperability between several city/county/state agencies in the Houston area. Can anyone give me an idea of what Marine band channels/frequencies I should include in the programming? I have 16, 13, 22, 23, and 2 in the 40's (my list is at work). Any other suggestions? (I do plan an outing to the Coast Guard station on Clinton also...)

Also, I have received only 2 requests to see the ICRI equipment that was in the paper last week. 1 deep west side of town, the other Montgomery County area. Anyone else before I set a date/time?

Thanks,

Steve

Subject: [HoustonScan] PRO-96 programming software comparison

Has anyone done a comparison of the two main (I assume) software packages for programming the PRO-96? I own the Scancat-Lite Plus, but in spite of following all the instructions, it continually drops some of the talkgroups when downloading to the radio. I am considering the Starrsoft package, but would like to know if anyone can comment pros and cons for it.

There was literally an air traffic jam at Hermann Hospital last night.
Numerous medevacs were all coming into the hospital in a short period
of time. Life Flight, SkyMed and Critical Air helicopters were all
involved. Some helicopters had to orbit briefly waiting for helipad
space. Some moved to Hobby and Southwest to clear space and returned
later to pick-up their crews. Lots of action on 128.85.

Also, can the ICRI just link radios that have predefined channels? Is there no ability to synthesize frequencies on the fly? If not, ICRI might not be too useful in a dynamic emergency where you have to cross-link to some obscure federal agency NOW.

Correct, is it not itself a radio, it just links radios together. When the next command van is built, with several mobile radios installed using a RIOS, the Moto RSS/CSS software will be on the same laptop that runs the RIOS. We would then be able to link someone nearly on the fly...

All the (VHF) federal agencies have the Texas interop channels programmed in their radios. I figure with all of Houston Police and Fire, 80 LE agencies, 20 Fire/EMS agencies, and the 6 Mutual Aid TG's on Star-net, the 800 MHz I-Tacs and the Statewide VHF mutual aid channels, I ought to be able to at least find common ground to meet someone on...

Thanks for the CG info also...

Steve

# 9970. RE: [HoustonScan] Friday pm Lifeflight

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-28 03:53:22 UTC
From: Capt. Glenn Jones
Topic: 9951  Message: 9970

SkyMed was actually a goof by our lawyers. Guess they had not heard of google. So we are now PHI AirMedical. We started just as PHI, had a few S76's that were not on contract, so we put them to work. Then we bought Air Evac out in Arizona in 99 I believe. Two companies were kept separate for a few years. Air Evac out west in AZ and all the old traditional programs remained PHI HQ in Lafayette. Then around 2000 we renamed our PHI side to PHI Air Medical Services. Then in 2003 we moved all EMS from Lafayette to Arizona. Then the big name change came when all the stand alones came along. SkyMed. But due to that name already being taken we had to change to PHI Air Medical. Now you know the name change story.

Glenn H. Jones, Jr

Nope, SkyMed pre-dates Phi.

No I have not been away, but if you are talking about the medical evac service provided by PHI , there operations name is Air Med Texas, not skymed.

La Porte, HC Pct 8, possibly Kemah, Seabrook following a male displaying a handgun.
Claims he is going to ram his vehicle into his girlfriend's house.
Ops on 155.625, TG 11664.
Pasadena may be getting involved.
He has a flat tire about to go to the rim.
West bound Spencer Hwy approaching Leulla.
Time 11:11pm.

This may have started in League City.
Right now, the suspect is southbound on Red Bluff passing Genoa-Red Bluff.
LCPD is on their trunk system TG 176.
Pasadena is on STAR-Net TG 6576.
La Porte is on 155.625 MHz.
HC Pct 8 Cons are on STAR-Net TG 11664.

One more update before my power goes off. Having power glitches with approaching storms.
They are now south bound 146 passing Nasa Rd 1. Have missed several attempts with spikes.
League City unit advised they have multiple vehicles from multiple agencies following.

Storms almost on top of me.
They wound back up in League City but have headed north on FM 270 across
Clear Lake into Webster so add another agency. Listen to TG 13872.
Apch Nasa Rd 1, running red light westbound on Nasa Rd.1
Speeds have typically been 40mph.
Think I heard DPS may be about to join. They don't put up with this stuff.

Scott,

PHI's operations are called Air Med Texas, and they have birds located at Conroe, Tomball, Bryan, Rosenberg, Victoria, and Corsicana. I know their marketing manager, Sterling Taylor, and have also done numerous drills with them.

# 9985. Pasadena Scanner Programming

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-28 15:47:12 UTC
From: John Stokes
Topic: 9985  Message: 9985

What control channels do I need to keep and which ones do I need to lockout in order to listen to the emergency services fire ,PD, AMB on Pasadena trunking system.

I understand that there are 2 systems for now, I mostly interesed in Pasadena's ems. Not sure which control channels to lockout or not to lockout. It seems from the posted documents that there are possibly 4 control channels?

868.1125
868.3625
868.6125
868.8625

Are there 2 control channels per system that need to be locked or unlocked?

Trying to understand how all this works, just miss the the PD and fire traffic on my scanner.

Looking forward to all info I can get.

John Stokes

Hi John,
You should only have control channels 868.8625 and 868.6125 programmed
to listen to Pasadena units.
Deer Park, South Houston and PISD are still using the old system which is
using control channels 868.3625 and 868.1125.
But they should be getting reprogrammed soon, possibly this week, so the old
system's days are numbered.
The old system is currently running only four frequencies, carrying voice
traffic on usually only 2 of them.

There was actually a contest to brand the Texas aircraft. The winner was to receive a trip for 2, to Las Vegas. I think a nurse at Conroe Regional won the contest. I heard that SkyMed was actually a fixed wing medical service, in Arizona, of all places. Google might have worked, but I would checked the backyard also. Lawyers...

SkyMed was actually a goof by our lawyers. Guess they had not heard of google. So we are now PHI AirMedical. We started just as PHI, had a few S76?s that were not on contract, so we put them to work. Then we bought Air Evac out in Arizona in 99 I believe. Two companies were kept separate for a few years. Air Evac out west in AZ and all the old traditional programs remained PHI HQ in Lafayette. Then around 2000 we renamed our PHI side to PHI Air Medical Services. Then in 2003 we moved all EMS from Lafayette to Arizona. Then the big name change came when all the stand alones came along. SkyMed. But due to that name already being taken we had to change to PHI Air Medical. Now you know the name change story.

If one of Steve's contraptions wasn't available, could some of the agencies combined their traffic on Mutual Aid 1 or a similar talkgroup during the pursuit?

For example, although I rarely get to Bryan/College Station, at least they have the Intercity Car (Ch 3) and Base (Ch 4) linked to the 800 system, so there is some interagency interoperability.

Could have, but for some reason it's not commonly done. Especially when
multiple agencies get involved the radio traffic is just too much. I bet most
of the officers were listening to 1 TG and talking back to their dispatchers
on another.

Another thing that keeps everyone from switching over is the chiefs don't
like it, loss of control via the dispatchers.

Steve

All the different agencies were talking to their respective dispatchers
telling them where the pursuit was going.
There wasn't really too much need for interoperability except when they were
laying spikes.
It would have also been handy if he had started shooting.
I don't know what all radios these different agencies had in their cars,
except DPS usually has an 800 to coordinate with other agencies.
It really is a mess when it comes to pursuits with multiple agencies. If
the different units do move to a common talkgroup or conventional frequency,
then they loose some timely updates back to their dispatchers. It's too
much of a pain for someone in a pursuit to try to keep up with more than one
radio at a time and trying to drive.
If the dispatcher is able to follow the unit to the common pursuit channel,
then that's a strain on them to keep up with the pursuit and their normal
routine dispatching.

What to do...

Yes, when the new EC-135 goes in-service, at Conroe.

http://www.pollyryon.org/
So they will keep the one at Victoria and put another back in Richmond?

# 9998. Re: [HoustonScan] Friday pm Lifeflight

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-29 14:53:57 UTC
From: Marvin Suggs
Topic: 9951  Message: 9998

Hi Frank,
When are they coming back? I know they moved PHI Med 3 to Victoria because Lifeflight had to use the helipad at Polly Ryon (now Oak bend) They were constantly required to lift off to make room for Lifeflight transfers to Hermann. Lots of fuel, wear and tear and no compensation.

Scott,

PHI's operations are called Air Med Texas, and they have birds located at Conroe, Tomball, Bryan, Rosenberg, Victoria, and Corsicana. I know their marketing manager, Sterling Taylor, and have also done numerous drills with them.

From: Capt. Glenn Jones
Topic: 9951  Message: 10001

Same quarters and same pad for them. A lot of wheeling and dealing was done. Far above a line pilots position to discuss. I originally stated their call sign would be 16, correction it will be 9. the tail number should be 510ph. It's the old Conroe (med 1) aircraft. Conroe is getting a new EC135. Rumor control has it that one more new ship to replace a 407 is slated for the Houston area in the near future.

# 10002. Re: pursuit

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-29 21:48:31 UTC
From: bpckty1
Topic: 3065  Message: 10002

Where smaller agencies are concerned, there should be one of Steve's contraptions available, if not in a supervisor's car, at least at/near the console(s), and a pre-determined command (probably by a supervisor with the initiating agency's dispatch center) for all agecies involved to activate their contraptions, if necessary.

From what Steve has said before, when the device is activated, the units involved will not notice any difference on their radios.

Something else for the various agencies to consider.

Especially when multiple agencies get involved the radio traffic is
just too much. I bet most of the officers were listening to 1 TG
and talking back to their dispatchers on another.

# 10003. Pasadena STAR-Net site

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-29 22:42:14 UTC
From: Myles Barkman
Topic: 10003  Message: 10003

Looks like they have opened the flood gates on the Pasadena site.
Seeing all sorts of users on there including SO, Constables, Galena Park,
Port Auth, Webster, TXDOT, and Hobby Aprt.
Can't tell if this is due to actual folks affiliating to system, or radio
techs forcing these TG to come through the system for load testing. Would
they do that?

Strange that some of the talkgroups I'm seeing are from HCSO District 1,
Spring ISD, Katy PD, Sugar Land PD and Humble PD.
But then I see weird things affiliating on certain sites all the time.

I see that PISD PD and South Houston PD popped up earlier today on the site
but not later in the day so it looks like they are still using the old site.

# 10004. RE: [HoustonScan] Re: pursuit

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-29 22:43:33 UTC
From: Scott Royall
Topic: 3065  Message: 10004

Well, I think it is a bit more complicated than that. Steve has eluded to the politics involved; chiefs don't want to release control over whoever they have in the game, and that makes some sense. Unfortunately, that also says those chiefs do not trust each other enough to implicitly loan out their officers for the duration of the chase.

In my view, communication responsibility should be with the #2 car if no aircraft are available. Command shouldn't be actively second-guessing the on-scene personnel. All oars should be rowing together. Just record everything for possible use later. Hopefully, #2 car is still calm enough to make the decision on pursuit outside the primary jurisdiction. If he says it is, then chase the subject to Mars if need be. Additional units should come under his control to preserve a coordinated effort.

Lots of FEMA and other federal emergency type folks staging in the area
ready to deploy into Louisiana and other affected areas.
Might try and take this opportunity to see if they are using any freqs in
the 138-144, 162-174, and 406-420 MHz bands.
They may not be using radios too much now until they get into Louisiana, but
you might catch some if they are in multiple vehicle convoys.

# 10007. Old Pro's and Uniden 235xlt notes---Pasadena

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-30 14:45:43 UTC
From: John Stokes
Topic: 10007  Message: 10007

Hello all,

I have been struggling to program a handful of trunk tracking scanners for all my buds and noticed that on the old pro's and the 235xlt scanners that or not dual tracking that I have to completely remove the Pasadena's old control channels from the scanner to get it to work. I tried locking them out and these scanners would still not scan very well or even at all so I completely removed them and things started working great.

Still waiting on PISD and others to switch over to the new system.

If sounds weird to some or you have a better fix than what I did let me know.

Happy scanning

John

I wasn't suggesting that command should second-guess the on-scene folks. I was suggesting a possible solution/location for the link to be made. Note that I suggested that this be part of a plan.

It sounds like you have a good contraption, I was just presenting a possible scenario for its use.

I'm glad you enjoyed it and got a good laugh out of it.

The strange affiliations are most likely due to supervisors or others
from those agencies being in or living in areas closer to what you would
consider the strange affiliation site. Not really surprising to me at
all.

Subject: [HoustonScan] Pasadena STAR-Net site

Looks like they have opened the flood gates on the Pasadena site. Seeing
all sorts of users on there including SO, Constables, Galena Park,
Port Auth, Webster, TXDOT, and Hobby Aprt.
Can't tell if this is due to actual folks affiliating to system, or
radio
techs forcing these TG to come through the system for load testing.
Would
they do that?

Strange that some of the talkgroups I'm seeing are from HCSO District 1,

Spring ISD, Katy PD, Sugar Land PD and Humble PD.
But then I see weird things affiliating on certain sites all the time.

I see that PISD PD and South Houston PD popped up earlier today on the
site
but not later in the day so it looks like they are still using the old
site.

# 10016. RE: [HoustonScan] Re: pursuit

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-08-31 01:10:26 UTC
From: Bad Pig
Topic: 3065  Message: 10016

As a LE Supervisor I agree with this statement in part, but administration or at least a officer with the rank of Sgt. Or above should make the ultimate decision on the continuation of the pursuit. Especially one that extends past the primary jurisdiction of the originating agency.

One major factor that most line officers forget to consider is the issue of vicarious liability. Supervisors up to and even above the Chief Administrator of the agency can be held liable for the actions of the line officers. And let's face it, when the adrenaline is pumping officers do not always make the most wise decisions. It is easy to Monday morning quarterback an event that has already occurred. Supervisor's should be allowed to make the call even if they are not on the scene. Most of the pursuits I have personally been involved in were with suspects that could have been apprehended at a later date without an extensive pursuit.

On the other hand, sometimes you don't really know who the suspect is or what the suspect is running for. Heck, they could have just committed a violent felony that the pursuing officer just does not know about. This is the excuse made by most line officers for continuing pursuits that began merely as a traffic violation. More often than not in the situation the reason the suspect ran is their belief that they had misdemeanor warrants. It is my belief that a supervisor that is informed, but is not actively involved in the pursuit is a better judge of how to handle this situation.

I have seen far too many innocent civilians and officers alike killed due to vehicular pursuits that did not have to continue.

-----Original Message-----

Sent: Monday, August 29, 2005 5:44 PM
To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] Re: pursuit

Well, I think it is a bit more complicated than that. Steve has eluded to the politics involved; chiefs don't want to release control over whoever they have in the game, and that makes some sense. Unfortunately, that also says those chiefs do not trust each other enough to implicitly loan out their officers for the duration of the chase.

In my view, communication responsibility should be with the #2 car if no aircraft are available. Command shouldn't be actively second-guessing the on-scene personnel. All oars should be rowing together. Just record

everything for possible use later. Hopefully, #2 car is still calm enough to make the decision on pursuit outside the primary jurisdiction. If he says it is, then chase the subject to Mars if need be. Additional units should come under his control to preserve a coordinated effort.

-----Original Message-----

Sent: Monday, August 29, 2005 4:49 PM
To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] Re: pursuit

Where smaller agencies are concerned, there should be one of Steve's contraptions available, if not in a supervisor's car, at least at/near the console(s), and a pre-determined command (probably by a supervisor with the initiating agency's dispatch center) for all agecies involved to activate their contraptions, if necessary.

From what Steve has said before, when the device is activated, the units involved will not notice any difference on their radios.

Something else for the various agencies to consider.

--- In HoustonScan@yahoogroups.com, "Myles Barkman" <kg5ai@h...> wrote:
> All the different agencies were talking to their respective dispatchers telling them where the pursuit was going.
> There wasn't really too much need for interoperability except when they were laying spikes.
> It would have also been handy if he had started shooting.
> I don't know what all radios these different agencies had in their cars, except DPS usually has an 800 to coordinate with other agencies.
> It really is a mess when it comes to pursuits with multiple agencies. If the different units do move to a common talkgroup or conventional frequency, then they loose some timely updates back to their dispatchers. It's too much of a pain for someone in a pursuit to try to keep up with more than one radio at a time and trying to drive.
> If the dispatcher is able to follow the unit to the common pursuit channel, then that's a strain on them to keep up with the pursuit and their normal routine dispatching.

Especially when multiple agencies get involved the radio traffic is
just too much. I bet most of the officers were listening to 1 TG
and talking back to their dispatchers on another.

# 10018. Fw: New Orleans live scanner audio available

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-01 05:05:28 UTC
From: Myles Barkman
Topic: 10018  Message: 10018

Also forwarded from another list. Live audio from Louisiana's Statewide
Motorola SmartZone trunked radio system.
This is a bigger system than STAR-Net or LCRA. It has at least 46 sites
(not all working now obviously) running mostly from 4 to 8 frequencies each
with Baton Rouge getting 12 frequencies.
The person running the live feed scanner must be scanning select talkgroups
since it's not non-stop chatter as I would suspect.
Check the RR site for extensive info on this big system.

From: Myles Barkman
Topic: 10019  Message: 10019

With the storm victims being bussed into the Astrodome, the Reliant Park LTR trunk is buzzing with activity.
Check the following pages for info on the LTR system and other conventional freqs that may be still used at the dome.
http://home.houston.rr.com/ecarlson/scanner/houston/reliantpark.html

Haven't been able to determine what if any other area public safety channels/talkgroups are being utilized for this activity.
Might listen to DPS 155.460 or 159.210 since they appear to be either escorting the busses or on the busses.

# 10022. Re: [HoustonScan] Fw: New Orleans live scanner audio available

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-01 22:01:50 UTC
From: Eric
Topic: 10018  Message: 10022

There have been several relays set up of the RadioReference feed. As
there are over 2,500 slots from other relays, people are being asked to
stay off of the radioreference.com feed as much as possible, and listen
in on one of the relays. I have a list of relays at
http://www.fyreplace.com, as well as a link to my own (which is
currently at capacity).

Just heard on Hobby Management talkgroup that there is a FEMA 737 over at Hobby about to head over to Ellington.

Started making a list (yes, another list) for all the activity surrounding the relief effort at the Astrodome and generally around Houston.
If you hear of any frequencies or talkgroups that are being specifically used to coordinate the relief effort, please share them with the group and I will add it to the list.
Still waiting to hear if any amateur radio ops are going to start up. They have been asked to be on stand by and ready to deploy to the dome.
Also waiting to hear of any confirmed federal government agencies (FEMA, etc.) that may be operating in the area.

# 10030. First Hand Experience From the Floor of the Astrodome in Houston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-02 17:09:00 UTC
From: Bad Pig
Topic: 10030  Message: 10030

While much has been said and forwarded to these lists citing various media sources I have not seen much in the way of personal experiences from officers, fire department personnel, or other volunteers.

I spent several hours in and around the Astrodome complex last night observing and assisting in LE operations. The situation for all involved is very tense and is not being helped much by the lack of organization and cooperation between different relief and official agencies. The situation for both the refugees and the emergency services personnel can best be considered as desperate. Tensions are running very high with the refugees and I witnessed several incidents of spot violence. I believe there is a high probability of increased violent activity due to the close quarters that these refugees are currently having to deal with. It appears like we have a powder keg that is just waiting to explode.

Last night most of the refugees that I saw were wondering around in a dazed state trying to locate any friends or family members that they could. As others have said there has definitely been a large criminal element that has also been brought into the Houston area along with the law abiding citizens. Federal officials have stated in the media that they did not expect the lawlessness that has occurred due to this natural tragedy. I don't know how they could not believe that this would occur. It has occurred in almost every natural disaster I have witnessed. There are always going to be individuals that take advantage of these situations and most people with common sense understand this is going to occur. Especially when a major metropolitan area is involved. This violent activity can only be expected to be higher when the city involved and is residents are already prone to violence.

The situation both in New Orleans and in Houston and other cities housing refugees is going to get much worse before it gets better.

My thoughts and prayers go out to all of those involved in this national tragedy.

I left the dome at about 3 this morning. I had been there, or running around getting equipment assembled/set up, since 11 am Wednesday. I recovered 3 pistols off "refugees" and I personally saw 22 in a box, but then I found out that was only from 1 of the 2 entrances. Officers at the other entrance they told me they had "a bunch more" in their box. Nobody is being charged.

There have been fights and reports of assaults. When I left there were 90+ busses in the parking lot waiting to unload, some of which had been staged for 7+ hrs. At one point the "refugees" decided to get off the busses in the parking lot and about 10 bus loads self-unloaded in the back parking lot. Some of the drivers have also thrown everyone off their bus and left. Some of the busses were told to take their passengers to Dallas and refused to leave the parking lot.

They are having trouble getting water distributed. Conversely, they have also been swarmed with donations and have nowhere to put them and nobody to sort through them. I was told by Reliant staff there is "a huge pile of stuff" in the red lot and people just picking through it.

Listen to HPD Ch 10 (patched to MA-1) for LE ops and HFD 8 for EMS ops. Lots of lost kids and adults, reports of assaults, and lots of people needing medical attention (about half heat related). There are a lot of sick people showing up.

There is a triage area for incoming busses by the west entrance, there is a clinic at the east entrance. The way it was working for the first 24 hrs was the busses came to the triage area and a doctor got on board and gave a speech to the effect of "immediate critical medical problems speak up now and we'll get you off. Other medical problems stay on the bus when everyone else gets off and we'll take you around to the clinic. Everyone else get off here and give up your guns and knives before you go inside, everyone is being hand searched on the way in."

Since the dome is full and they haev started using the other buildings since I left I don't know how it's going now.

Just a note about New Orleans public safety comms. The city ran an 800 MHz EDACS trunked system while the State runs a Motorola SmartZone system.
The EDACS system is down, but police were (at least earlier this week) able to operate on two conventional ITAC repeaters.
ITAC1 was being used for East, and ITAC2 was for West.
Lots of portable comm equipment has been brought in for setting up comm systems for different agencies.
Perhaps they will set up NO with a temp EDACS system.

Probably trying to set up temporary cell phone service in area.

Nextel was one of the first wide-area comm services to fail. Perhaps they will work to get a temp system in place there too.

# 10039. RE: [HoustonScan] New Orleans public safety comms

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-03 16:45:19 UTC
From: Michael W. Jones
Topic: 10037  Message: 10039

Nextel solution will be a ways off. According to the Thursday service bulletin from Sprint (I know I got one Friday, but I couldn't find it in my e-mail), the CDMA network (PCS) is operating, but with no long distance calling from the Mobile Telephone Switching Office (MTSO) in Kenner, Louisiana, and 301 towers offline across the damaged area. Priority work continues on restoring the long distance calling, and as access is allowed into damaged areas, work will begin restoring the towers.

The iDEN (Nextel) network has 210 towers offline across the damaged area. Calling in/out of region is working, but with drastically reduced capacity, resulting in large numbers of blocked calls.

Sprint's Wireline network (which feeds the wireless networks) is equally impacted, with the wireline central office (CO) in New Orleans offline due to water intrusion into the facility. At this point, most of the electronic switchgear is presumed to be compromised, and will have to be replaced (And moved to the second floor if it is). Due to the evacuation of the city, Sprint personnel have not yet been able to go on site to complete a physical assessment.

All three major wireline carriers (AT&T, MCI and Sprint) have initiated their disaster recovery plans. AT&T's plan is very proficient and they practice for it once a quarter, and could restore 50-75% of service in days. Part of this is due to extra capacity built in the network for such a situation, as well as a "Hot Standby" Central Office in an undisclosed location.

I work in the wireline side of the industry (for a private company) and based on the reports I'm seeing, I would guess that most of the cellular networks will be significantly restored in 30-60 days, but the wireline infrastructure could take 60-90 days. Again, much of this is dependant on the power companies restoring service (which I suspect will be along the same timeframe)

The New Orleans EDACS PROVOICE radio system is offline, due to most transmitters around the city being flooded, the dispatch center is flooded, and loss of natural gas to their primary downtown site's generator.

Louisiana's Governor has put in an emergency request to the President asking for an immediate granting of several more trunked frequencies, along with providing 25 more repeaters, 3 100' tower trailers, 1000 more radios, and the personnel to install and maintain the equipment. The statewide Motorola SmartZone system is overwhelmed in the district, with 2500 users on a system designed for 800.

Obviously, this situation is a prime demonstration of why interoperability is needed. Had all the agencies been on conventional frequencies, or on a

common type of trunked system, with the other agencies programmed in to all radios for backup, the New Orleans PD would not be suffering with no communication right now.

That's the latest news I have.

Subject: [HoustonScan] New Orleans public safety comms

Just a note about New Orleans public safety comms. The city ran an 800 MHz EDACS trunked system while the State runs a Motorola SmartZone system.
The EDACS system is down, but police were (at least earlier this week) able to operate on two conventional ITAC repeaters.
ITAC1 was being used for East, and ITAC2 was for West.
Lots of portable comm equipment has been brought in for setting up comm systems for different agencies.
Perhaps they will set up NO with a temp EDACS system.

Probably trying to set up temporary cell phone service in area.

Nextel was one of the first wide-area comm services to fail. Perhaps they will work to get a temp system in place there too.

Talkgroup 20496 does not appear to be Harris County Pollution Control as previously proposed.
This Katrina event has caused it to become active enough to hear users such as "EMS 2", "EMS 4", and something else that just slipped my mind.
Give it a listen and see if we can identify these folks.
Search for more unknown talkgroups that might come out of the wood work.

Steve, MA-6 is 18608, so it looks like another Quest begins for 20496.
And, are they using any of your contraptions at either/both sites? I
ask this, since the simulcasting of MA-1 and 460.4500 are very clear,
unlike HPD-1 and 460.4250.

Here are my gleanings from today:

Reliant Activity 090305

This is what I've monitored today, some old info, some new:

Command Posts

Reliant Park/Astrodome
HPD 460.4500 PL123.0 Simulcast on MA-1 TG 08560
HFD 460.6250 PL127.3
HCSD Dispatch 6 TG 19120
Northwest TG 18800

G.R. Brown Convention Center
HPD 460.5250 PL123.0
HFD 460.5750 PL127.3

Others
MA-2 TG 08592 Appears to be Reliant Hall
Community VFD T-1 TG 11920
Juvenile Probation TG 09776

Mainly Reliant Park, but possibly at the GRB
MTA Special Events TG 15344, directing busses and traffic

Unknown location(s)
MA-3 TG 14224, probably HCCO-1
MA-5 TG 18576

Escorts
DPS 155.4450 PL 162.2, Simplex

The one time I have heard this talkgroup the users were calling each other HSA 3 and 4.

Perhaps the radios are on loan.

When I left the dome and GRB this is what was set up.

HPD dome ops on Ch 10

HCSO dome ops on MA 3
(they didn't like listening to us on the patch and switched channels and
didn't tell us).

A few HPD radios have been handed out to DPS (who are working under the
coordination of HPD). We try to get each squad of Troopers 1 HPD radio (most have
no radios at all).

Several other agencies have sent a few officers. Those with 800 have been
sent to MA 3, even though they are working in squads with HPD (so they can at
least yell for help and SO can relay it to us). We try to make sure each squad
has 1 HPD radio. Many officers have no radios at all.

MA 4 has been given to other "non-LE and non-EMS" agencies for use in
coordination. Red Cross, FEMA, etc. The city came up with 70 800 MHz radios to give
out and I think the county another 50 or so. These radios were programmed
with MA 4 and a couple of "non-LE" MA's (I think 6 and 2). They also have some
I-Tacs in them (simplex). There is talk of installing an I-Tac repeater out
there, no time frame. The County radio shop may be creating some new TGs but
they are trying to avoid that so they don't have to pull every radio back in
for reprogramming.

The Hams have a simplex channel up, 146.??, I saw it written on a wall but
forget what it is now. Someone in range can catch that. No idea what they are
using it for.

Metro PD is using their "Special Event" TG for Dome ops.

HPD ops at GRB are on Ch B-3 (460.525) patched to MA 5 which is being used by
TABC at GRB (they are providing about 1/3 of the security out there).

There are a variety of state agencies, Nat'l guard, reserve, etc units out
there (hard to tell who they really are in all that camo). The DMAT teams are
out there with staff from all over the country. Most of these units do not
appear to use radios among themselves since they operate in big groups at fixed
sites. I'm sure they have some coordination back to the state but I suspect

cell phones are the most common.

Speaking of cell phones, the towers are jammed near the dome. It is not usual to have to make 5 tries to get a call out. I spoke with a couple of cell phone companies and was told it's too bad, that's the way it's going to be until the load drops. One rep told me since the towers are down in Louisiana a lot of the traffic is being rerouted through Houston and that's making the problem even worse. I don't know if this has anything to do with it or if it's what they've been told to tell people who call. I was with the Governor's advance team the day before he showed up and they couldn't get a call out at one point so maybe he'll lean on them a bit to do something (what that something would be though I have no idea).

I'll drift a little bit away from the radio focus of the list, strict moderator wanna-be's click "close" now.....

All busses are being sent to the yellow lot when they come in (McNee between Kirby and Main). This is where all busses entering the state are supposed to report. They all get off the bus and get their person and belongings searched for weapons, while this is being done the bus is searched as well. They get a medical triage there and anyone serious is sent to a hospital. They get registered through Red Cross and given ppwk to streamline their entry into whatever shelter they are sent to. They get food and water, and sprayed down with a fire hose if they request it (many haven't had a shower in days and are jumping at the chance). There is some replacement clothing there for them if they want to ditch what they've been wearing for almost a week. They are then put back on the bus and sent to a shelter somewhere in the state.

Volunteers are being brought in through the McNee entrance and sent to the 2nd floor of Reliant Center. They are registered and given a training class before they start (I think it's an hour, rules and procedures and things like that). Right now they are swamped with volunteers and wind up having to turn a lot of them away. I suspect this to change as this situation progresses. I tell anyone asking me about volunteering that the best thing to do might be to wait a week or two or three until the volunteer pool starts to evaporate and they start needing all the help they can get. 866-GET-INFO is the Red Cross number for all information, including the need for volunteers. FEMA signed ppwk for the dome for 90 days so we will be up and running for a long time out there. Donations are being taken at the East ramp. Enter through McNee, go around the dome, drop off at East Ramp, and exit Holly Hall.

For those familiar with the astrodome complex, here is a rough layout.

The dome itself is where the bulk of the refugees are. Reliant Center is where a couple thousand more are. There is an area here designated for single women and children, no adult males allowed inside.

Media staging is off Fannin through the Naomi entrance. More about media further down.

Medical "triage" for incoming refugees is in the yellow lot on McNee west of Kirby. The "Clinic" is on the back side of Reliant Arena. The Clinic has

it's own "triage" area for people arriving at the clinic and this was causing some confusion about where "triage" was. There are some people being housed in the arena itself also. It appears that a lot of these are people who have to make regular trips to the clinic so they are in the same building (dialysis, diabetic, etc).

There is also a large contingent of Mental Health professionals of all levels. This was one of the surprises to the City, County, and State Health Depts and they were overwhelmed. HPD has sent a contingent of it's Crisis Intervention Team Officers to assist the Mental Health folks. CIT Officers get 40 hrs a year in specialized training in dealing with mental health issues and mental health "consumers" given to them by Harris County MHMRA. Since they are also in uniform they are able to do a little bit of double duty over there, but have specifically been taken out of the loop for police services by the Chief. There are a number of CIT officers on "regular" assignment at the dome (i.e., not assigned to the Clinic) and they are being called to deal with the jumpers (100% success so far by the way).

There is a section inside the dome for lost children and elderly. There is a Post Office and a Social Security office set up in the dome also. The phone companies have come out and installed free phones inside and the cell companies have several vans with free phones set up outside. I am told there are several computers for people to use with internet access in the dome also.

The County Commissioners busses are running loops around the complex taking people to and from the clinic for medical treatment.

One person on a bus died in the parking lot, he had cancer and it appears to have been a contributing factor. Another person was hit and killed by the Metro Rail outside the Holly Hall exit. He was reported to have been walking right down the middle of the tracks.

Back to the media....

There have been several disputes at high levels about who is allowed to film where. Per the Red Cross media may not be taken in to a "residential area" which they define as any place where there are cots for people to sleep on. Unfortunately, the Red Cross has decided to grant some exceptions to this without telling anyone first. Some crews have been given permission to go shoot video inside by the Red Cross only to run in to an officer from some agency who has been given very clear, very strict orders (from the Red Cross) that no media is allowed in a housing area period. "They gave me special permission" isn't going over well, and everyone is getting frustrated.

While I don't doubt their humanitarian aid and ability to mobilize large numbers of people and assets, their communication outwards about what they are doing seems to be horribly lacking. Yesterday they told us to get 20 busses lined up to transport 1500 people from the dome to the GRB. By the time we got it done the person who had told us to do it was MIA. I tried to find one of them who could at least give me a name or a phone number to call to let someone know we were ready to go and that took 2 hrs. The person I finally got in touch with told me had just got there and sat down and didn't know anything about

that request. Four hrs later, with no success, we bagged the whole thing and sent the busses back home.

This was the status when I left, things are changing by the minute out there. I've blurted out everything I can think would be of interest but if you have a question I'll see if I can answer it.

Roger that. Your updates are very informative.

I suspect the cell people to rethink their strategy as it dawns on them that this isn't a short-term spike. After all, air time is revenue for them.

Ironically, this is one of the very scenarios I was talking about where hams could be re-validating the usefulness of their hobby to Congress by securely bouncing terabytes all over the Gulf Coast. If only they had been inventing new transmission modes, or at least mimicking the military.

I'm off to rethink the programming of my Pro-93.

From: Myles Barkman
Topic: 10049  Message: 10049

US Carnival Cruises to Send 3 Ships to aid Katrina Relief

By VOA News
04 September 2005

The U.S. government has chartered three of Carnival Cruise lines ships for the next six months to provide temporary housing for victims of Hurricane Katrina.

Carnival officials say the ships will be able to provide shelter for as many as 7,000 people displaced by Katrina.

Two of the cruise liners will be based in Galveston, Texas and the other will likely be docked in Mobile, Alabama.

Some information for this report provided by AP and Reuters.

# 10050. Picture of Superdome

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-04 22:08:17 UTC
From: Myles Barkman
Topic: 10050  Message: 10050

Here's a satellite shot of the Superdome and some of the surrounding area.
Don't know when it was taken suffice to say it was within the last week.
You can see that most of the damage to the roof structure is on the north
and east sides where the winds battered it for hours as it came inland.
Only a small portion of the roof on the southwest side was shielded.
http://ngs.woc.noaa.gov/storms/katrina/24429375.jpg
You can check other area in the major damage path here:
http://ngs.woc.noaa.gov/katrina/KATRINA0000.HTM

Check here to see some lists of names who are reported safe and what their
status is.
http://www.cnn.com/SPECIALS/2005/hurricanes/list/

More about the cruise ship shelter here:
http://abclocal.go.com/ktrk/weather/090305_katrina_cruises.html

I believe Clinton and daddy Bush are coming to Houston tomorrow (Monday).

so it looks like another Quest begins for 20496.

Monitored the talkgroup tonight and heard two nurses discussing vaccinations and clinic times. Thus, medical realted. So, this may be the Harris County Health Department, Houston Health Department, or Hospital Hospital District.

Think I figured this out:
http://www.harriscountyhealth.com/menu-divisions.htm
Looks like these guys are involved with several different aspects of health, including pollution control. These guys are also in charge of mosquito control and animal control.
Perhaps 20496 is primarily the Environmental division part of this organization but since it is the least used of their talkgroups, they are using it for this event.

Topic: 10037  Message: 10053

Yes, the state does run a Motorola, but most of the sites in the effected area were out. We were on the 90 (at the Superdome) and could not get out most of the time. The ITAC channels have been very helpful to NOPD, although very regional.

On the cellular side... By Wednesday night, Verizon must have must have placed a temp site near the I-10/Causeway operation. I had full signal while working in that area. Cingular also worked in that area.

Frank

Myles Barkman <kg5ai@...> wrote:
Just a note about New Orleans public safety comms. The city ran an 800 MHz
EDACS trunked system while the State runs a Motorola SmartZone system.
The EDACS system is down, but police were (at least earlier this week) able
to operate on two conventional ITAC repeaters.
ITAC1 was being used for East, and ITAC2 was for West.
Lots of portable comm equipment has been brought in for setting up comm
systems for different agencies.
Perhaps they will set up NO with a temp EDACS system.

Probably trying to set up temporary cell phone service in area.

Nextel was one of the first wide-area comm services to fail. Perhaps they
will work to get a temp system in place there too.

Yes there is. Starsoft does not "TRACK" the talkgroups on a computer.
Trunker is the program that will do that. I have modified my PRO-97 so
I can track the talkgroups with Trunker.

Contact me direct and will tell you more about it. I have an idea that
we have meet in the past on the east side of Houston. Not sure if you
are the daughter or the wife of one of the Parker brothers.

From: Louis Maag
Topic: 10057  Message: 10060

The simple answer is no.
No GRE built scanner can be "controlled" by software.

As others have pointed out, there is software which can be used with
a computer and virtually ANY scanner capable of receiving the control
channel which will track the TG's. Don't tie you new scanner up doing
this task, find an older non-trunk tracking scanner for this.

Lou

Subject is in custody (2:22a.m.) about an eight of an mile from 146
on I-10

# 10068. La Porte shelter in place

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-10 19:41:12 UTC
From: Myles Barkman
Topic: 10068  Message: 10068

La Porte PPG Industries has a vapor release that is causing a shelter in place.
PPG advised FD that the release was contained within the confines of the plant which was obviously incorrect with FD verifying the cloud moving across Spencer Highway.
Spencer is shut down from Driftwood to 16th Street (about a mile).
PPG is located between Hwy 225 and Spencer and west of Hwy 146.
The northeast wind is blowing the cloud southwest towards Spencer Hwy and Spencer Landing subdivision. That is also where LaPorte EMS station is.

Ops on LaPorte PD 155.625 and FD 154.130 MHz.

Correction-PPG is located north of Fairmont and West of Hwy 146.
It is a southerly wind blowing the cloud north/northwest into those areas.
Harris County HazMat is on scene to do some air quality testing.
La Porte left a message concerning this release on the CAER line at
281-476-2237.

# 10070. Possible Solar Storm

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-11 15:41:18 UTC
From: Chris Boone
Topic: 10070  Message: 10070

A s t r o A l e r t

09 September 2005

Solar Terrestrial Dispatch
www.spacew.com

INTENSE SOLAR FLARING CONTINUES

Active sunspot complex 10808 (also known as Region 808) continues to impress. It is now more fully in-view and is presenting itself as a very large sunspot complex that will (if its present size persists) be visible to the unaided (protected) eye over the next week to 10 days.

Aside from the very large class X17 flare reported in the last Astroalert, it has managed to produce two additional major flares: a class X5 and a smaller class X1 within six hours of each other (the X5 occurred at 21:06 UTC [5:06 pm EDT] on 8 September, and the X1 occurred at 03:00 UTC on 9 September [11 pm EDT on 8 September]).
...
These recent events (the three X-class flares observed thus far) have elevated the population of energetic protons in the near-Earth space environment to levels that are now roughly 100 times more dense than normal background levels. Energetic protons are being redirected by the Earth's magnetic field toward the polar ionospheres, where they are bombarding and ionizing the polar ionosphere to levels sufficient to produce a phenomenon known as Polar Cap Absorption (or PCA).

PCA is not harmful to human health, but can be disastrous to high-frequency radio communications through the polar regions. Such radio signals are normally bounced off the lower side of the ionosphere and are returned back to the Earth, permitting long-distance radio communications to take place.

But the energetic protons have ionized the lower ionospheric layers to levels capable of absorbing most radio signals that attempt to pass through that region. As a result, for large regions of the Earth where radio paths traverse the high and polar latitudes, a radio blackout is currently in effect.

Additional strong solar flare activity could significantly elevate proton populations over and above what is currently being observed, during the next two weeks. This could prove to be hazardous to the health of spacecraft in orbit around the Earth. Indeed, it is possible for vulnerable spacecraft to become crippled or even irrevocably lost. It is also possible that spacecraft reliant upon solar arrays for power may observe permanent degradations in performance. In other words, another effect of strong space radiation is to permanently reduce the efficiency of solar panels, causing a

reduction in electrical output and therefore reduced lifetimes.

Space weather storms caused by the high velocity mass that is often ejected from such powerful solar events can also significantly reduce the lifetime of spacecraft through another method as well. During strong storms, the outer reaches of the Earth's atmosphere heats up and bloats outward into space. This bloating effect increases the atmospheric drag on spacecraft in near-Earth orbits and can cause their orbital parameters to change rapidly. Their lifetimes can therefore be reduced simply because the drag reduces their altitude, which can result in early re-entry of the spacecraft back to the Earth.

The intense radio bursts associated with these solar flares can produce interference with antennas that happen to be directed toward the Sun during the bursts. For example, if a strong solar flare occurs when the Sun is just rising and a cellular phone or other radio communications network (wireless internet, etc.) happens to be aligned in the direction of the rising Sun, the intense radio emissions from the Sun may interfere with the communications occurring in the network. This can result in poorer communications performance.

From: Eric C. Carlson
Topic: 10071  Message: 10071

I'm hearing some activity on 408.4 [DCS 025] near downtown. This is a federal itinerant frequency. Talk about 45 north and east to Beaumont and "in the event something is going on do we need an alternate route out of the city?" It sounds like they are not from the Houston area; perhaps FEMA-related?

Other federal itinerants worth keeping an ear on: 418.05, 418.075, 418.575

-Eric

Myles,
I have logged several more law enforcement frequencies working the Houston Katrina effort;
1.. DPS Channel 9, simplex command post at Reliant Center, 159.2100, pl 162.2 (still quite active)
2.. DPS Primary A, simplex, 155.4600, pl 162.2 (heard during evacuees arrival, I believe used for bus escorts)
3.. National Law, simplex, 155.4750, csq (heard during evacuees arrival, I believe used for bus escorts)
4.. Fire Mutual Aid, simplex, 154.2800, csq
5.. Statewide Law car to car, simplex, 154.9500, csq
Wayne

Bingo! Guys (and gal), this is exactly what I've been saying! Katrina had nothing to do with evil Republicans like me trying to kill off the poor, down-trodden Democratic voters. It was the text-book example of a complete communications melt-down. Anyone with even modest equipment on HF (Kirsten, that's the formal term for shortwave), VHF, and UHF could witness the total failure to communicate effectively (hell, most of the chaos was even available on the Web)! Politicians were using the media to talk AT each other instead of communicating. The official Louisiana Office of Emergency Preparedness evacuation plan for SE Louisiana is available online. Considering that it was written by bureaucrats, it is an amazingly succinct document that, among other things, states clearly that evacuation coordination is a local job. FEMA is basically a huge fire hose of resources; fire hoses flop around until someone down at the business end stands up and starts directing the flow.

Katrina is also a stark case of what I've been riding local Amateur Radio Operators about lately. Their sacred cow, 100+-old Morse Code technology, was rendered largely moot by solar conditions (and we're STILL enduring a major flare). If "hams" want their hobby to retain its federally-protected status, they urgently need to step up with robust modern communication modes. A modern ham should be prepared to pass along terabytes of radio traffic while dog-paddling through 20 feet of water and braving 200-mph winds. Yes, I'm exaggerating, but just modestly. Most of the required technology already exists, but our laws heavily restrict what the military can do within local jurisdictions. Hams need to remember that Congress specifically created their "service" to maintain a pool of skilled radio operators ready to dive into disasters on their own and set up emergency communications. This is something hams used to do reasonably well,

(Kirsten, please show the web page below to Justin. Perhaps it will make him rethink his rant. :) )

From: Steve Nelson
Topic: 10075  Message: 10075

WE frequently are reminded that our first responders desperately need improved communications capabilities to do their jobs. Hurricane Katrina has made it painfully obvious that when we face threats to the citizens of this country, our first responders need to have the best possible communications tools.

Major disasters highlight the need for state, local and federal agencies to have immediate and secure inter-operational communications so first responders can communicate quickly and privately with each other in these emergencies.

Every day, police, fire and emergency personnel in this community face difficult communications problems. Most of these problems occur because of dangerously congested radio systems. Unfortunately, the ability of first responders to communicate with each other is jeopardized because of the lack of a precious resource: clear radio spectrum, or airwaves.

As a public safety official, I would like to express my concern that Congress has not yet taken action to clear the 700 MHz spectrum band for first responders and complete the transition to digital TV.

In 1997, Congress and the FCC recognized the great need for public safety to have a dedicated spectrum and earmarked 24MHz of spectrum in the 700MHz band for state and local public safety.

However, eight years later, television stations are still blocking public safety officials' access to the 700MHz band.

Why? Because Congress has not set a date for TV stations to transition from this spectrum to other TV channels.

It's important to know that conversion to digital will not result in the loss of TV signals for anyone.

About 85 percent of Americans receive television signals over cable or satellite and would not be affected by the transition.

For those households that receive television signals through the air, they will receive better, digital TV signals with an inexpensive converter box.

This is a win-win situation for everyone.

To ensure that we, as first responders, are able to continue to save lives and keep America safe, we need to clear the spectrum for emergency response ? now.

We need our public safety workers to be able to have interoperable communications, the ability of agencies to speak quickly to each other in emergencies. This could mean that a child, separated from her parents during a hurricane, is returned unharmed, or that multiple agencies coordinating relief supplies can deliver services quickly and efficiently.

Clearing the spectrum will provide the first-responder community with the ability to enhance operations and upgrade capabilities, including high-speed data transfers, wireless video transmissions and Intranet access in vehicles.

We need Congress to set a firm date to complete the transition to digital TV and free the spectrum for public safety as close to Dec. 31, 2006, as possible.

The lives of first responders and the citizens we serve remain at risk under current conditions.

Hurtt is chief of the Houston Police Department and president of the Major Cities Chief's Association.

The following is not accurate:
<Snip>
>Hams need to remember that Congress
> specifically created their "service" to maintain a pool of skilled radio
> operators ready to dive into disasters on their own and set up emergency
> communications. This is something hams used to do reasonably well,
</Snip>
Amateur Radio operators don't have the Right to "dive into disasters on
their own and set up emergency
communications"

Look up information regarding ARES and RACES to get a better idea of what
it's all about.

<snip>
> Katrina is also a stark case of what I've been riding local Amateur Radio
> Operators about lately. Their sacred cow, 100+-old Morse Code technology,
> was rendered largely moot by solar conditions (and we're STILL enduring a
> major flare).
</snip>

True solar conditions are not good, but a lot of information was and is
being passed but only AFTER the AMATEUR RADIO OPERATORS were finally allowed
to be called in to RELAY INFORMATION.

What's your beef with Morse code? It gets through when other modes can't.

As for the comment about Amateur stepping up to the plate and using more
robust modern communications modes, you must be talking about those robust
communications modes that our government and private industry has spent
millions of dollars on that were rendered useless due to the storm......

As for transmitting Terabytes of data, I guess you're expecting either the
world to become flat so as to allow line of sight communications on the
microwave frequencies where terabytes of data can and are transmitted by
Amateurs, or until the laws of physics are modified (I guess by an act of
congress) allowing lower frequencies not limited by line of sight to carry
data at higher rates. Then I guess we'll step up to the plate.

Other Amateur operators on this list probably have more to say on this than
I do, perhaps we'll here from them

73 Ben - ne5B

He's right, to a point. But merely having the spectrum available does ont insure inter-operability. In fact, if done as at present, things won't change. The vendors will NOT build compatable systems until forced to. I don't think the market place can do this, and I don't see the FCC or other agencies making it happen either.

So we'll end up with 700 mhz full of non-communicating, great systems. Maybe.

Not to mention, tens of millions (or more) of people who cannot afford a
digital TV, or digital converter for use on a regular TV, will lose
their television. The switch to digital TV is prolonged, for entirely
that point, so that prices on new technologies will lower over time so
that the majority of people can afford them.

Here's my analogy on that: We still require the phone system to support Pulse dialing. We won't make folks buy a $10 at retail Touch Tone phone.

So if we (as a society) are unwilling to force people to upgrade for $10, how are they going to do it for $200 or so (per set)? That's the best case figure being bantered around, as far as what a set-top box might eventually cost.

The problem is that the Police Chief does not understand that he currently has one of the best systems around for Mutual Aid and interoperability in times of disaster. Each of his radios are not on a proprietary system nor do they require an ISW or OSW to open a path to a talkgroup that opens an outbound path to each of his other units. His conventional UHF system will also operate for several miles in simplex mode. 700mhz is not the answer. Better use of exsisting frequencies and understanding the pitfalls of centralized, database driven systems. What would happen to your computer in your car when your car runs out of gas, is flooded, or is crushed by a tornado? It would not function. This is similar to what happened in the gulf states. What happens when your CEB gets the equivilant of the "blue screen of death?" Which has happened to harris county before when it lost its database. As was mentioned on another list...Oh, how I long for the days of a 110 watt low-band mobile!

Another Police Chief that is spouting politics instead of officer safety and keeping the public's best interest at heart.

the link below will show some of the real reasons for communications breakdowns in the affected areas.

Funny, I didn't deem it worth answering.

If you want to pursue the topic, read the attached email.

Im have a pro 91 handheld scanner and am having a lot of problems in getting the Pasadena Tg and LifeFlight as well as the other Starnets Turnks...Was wondering if anyone else is have the same problem... or thought maybe it might be the trunk system?

wayne gresser <wgresser@...> wrote:
Myles,
I have logged several more law enforcement frequencies working the Houston Katrina effort;
1.. DPS Channel 9, simplex command post at Reliant Center, 159.2100, pl 162.2 (still quite active)
2.. DPS Primary A, simplex, 155.4600, pl 162.2 (heard during evacuees arrival, I believe used for bus escorts)
3.. National Law, simplex, 155.4750, csq (heard during evacuees arrival, I believe used for bus escorts)
4.. Fire Mutual Aid, simplex, 154.2800, csq
5.. Statewide Law car to car, simplex, 154.9500, csq

It may be a strain. But, have you tried resetting the scanner and re-entering the frequencies and talkgroups? (Check your manual for resettng the CPU). Been there, done that, and it usually works.
Ah, teknologie ;^p

And, just about all Pasadena system talkgroups appear to be on Borgnet.

Happy Scanning.

Need some more info.
What part of town are you in?
What STAR-Net site are you trying to listen to?
Have you made any changes to the programming of the scanner lately?
What talkgroup number are you trying to receive Lifeflight on?

# 10088. Pro95 PC Cable, and base unit reccomendations...

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-14 08:22:50 UTC
From: Eric
Topic: 10042  Message: 10088

Does anyone have a spare Pro-95 PC cable they'd like to either sell cheap, or give free? I've been thinking of experimenting with the Pro-95 for a bit.

Also, what scanner would you reccomend for a good base unit to sit on my desk. I'd prefer one that can integrate well with the PC, especially one that can be completely controlled by the PC, and/or update a display on the screen when it locks into a channel during the scan. (I've been thinking of live feeds for a little while, out of boredom, plus PC integration is always fun.) The less expensive, the better.

Thanks,
Eric

OK, it's starting to sound more like an interference issue rather that the radio/programming.
Is there a cell phone/Nextel tower within about a mile of your location. That will wreak havoc on your wide-band scanner. They are even known to interfere with "real" 800 MHz radios which is the reason for the band realignment to separate two-way land mobile users from the cell phone/Nextel frequencies.
If this is what is bothering your radio, there is little you can do besides reorienting the antenna or getting a beam antenna to point at downtown or point it in the opposite direction from the cell tower.

If you mean audio appears to drop out, I've noticed that for awhile. Think it's only a problem if you are decoding PL on your scanner.
Either the audio is too hot on the repeater and going out of the passband, or it is messing with the PL decoder and muting audio when it should not be.
I tried reprogramming my HFD channels to be in FM rather than NFM mode to try to help.
Doesn't appear to be bothering HFD radios.
Might have to check with multiple radios (types of radios) to see what works and what doesn't work.

Wonder if multiple transmitter towers could be doing something too.

Have heard from a couple of sources about another tragedy in the Shepherd
area today.
Someone was reported down in the Trinity River north of Shepherd.
A deputy with Liberty County SO went in after them.
Both bodies have been recovered.
There was a procession of law enforcement vehicles escorting the deputy and
they left the scene.
Sad.

If a nearby NEXTEL site is causing problems for you, you can also try to attenuate (weaken) the signal that you receive. It seems counterintuitive, but has worked for me.

I think that a nearby high powered NEXTEL signal can cause our scanners to incorrectly receive the desired frequency. If we decrease the amount of energy that we are receiving on the desired freq, the scanners then seem to work properly.

Late last night I was on it and there were a couple guys having a looong
conversation in spanish on it. I was able to step on them and get through to
the dispatcher though. At about the same time the spanish was going on on HFD
Tac 7 another HFD channel was coming in pretty clearly on 3 FRS channels.

HPD and HFD have been having a lot of radio problems this week, blamed on
the solar stuff going on. Special Ops was bleeding over badly on to SC
yesterday when I was at the Maxwell House fire. Lots of beeps and screeches all day
too.

I'm not familiar with the workings of BPL. What exactly is a "transmitter installation"?
Is it where they tie the internet provider in with the power distribution?
I figured this would occur at the substations, but like I said, I'm not familiar with how they do it all.
Is that just south of Tidwell?

Driving down the Hardy Toll Road this afternoon, I noticed a definite BPL transmitter installation on the northbound side around the 8600 block.
Anyone heard about this, or know who it belongs to? I don't have an HF installation in the car per se, but CB sounded fairly quiet in the immediate area.

Having an HF rig right where BPL started (Richmond and RR tracks west of Greenway) I can tell you that CB band it way out of the area where you will hear any noise. Thank you for trying though.

# 10119. Another Police Chase

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-19 04:50:19 UTC
From: niko627is
Topic: 10119  Message: 10119

ABC 13 reported:
(9/18/05 - HOUSTON) - What started as a routine traffic stop ended anything but routine. It led to a lengthy police chase on the southeast side of Harris County. The driver who allegedly started the chase is now in custody.

It started on Highway 225 near Pasadena Boulevard when police tried to make a traffic stop. The 45-minute chase ended after police say the driver carjacked another vehicle.
On the run from more than a dozen squad cars, the suspect heading south on the Gulf Freeway in a pickup truck wouldn't give up to police.

Not far away, near Bay Area Boulevard, an officer tossed out spike strips on the Gulf Freeway. But the runaway driver saw the spikes, too, and quickly maneuvered around them.

Near NASA Road One, the driver pulled over, jumped out of the vehicle, hopped over the barricade, and made his way across several inbound lanes. He then crossed the service road where he escaped into a large empty parking lot.

A Transtar Jam Cam caught a glimpse of a Jeep taking off. Police say the suspect carjacked it. The innocent driver was taken into custody for a moment, and the suspect kept on going.

He left Webster in that Jeep, and ultimately ended up crashing into a tree in a Pasadena neighborhood near Flamborough and Malvern. After 45 minutes, he was finally in custody.

Police say the pickup truck was reported stolen and they found drugs in it. The suspect, who's identified as Carl Bender, also faces felony charges of evading arrest.
(Copyright © 2005, KTRK-TV)

I was out of town today, too bad I missed those transmissions.

Niko

# 10121. Stafford FD/FBC EMS question...

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-19 08:08:29 UTC
From: Eric
Topic: 10121  Message: 10121

Lately, I've noticed Stafford FD and FBC EMS duplicating calls. Case in point, this morning, was an unconcious person call. Both dispatched one medic unit and one district unit. Seems kind of pointless to dupe a call out like that, to me.

How do they decide who gets the call, whichever arrives first?
For that matter, why do they dupe it?

-e

# 10122. Re: Stafford FD/FBC EMS question...

Yahoo group: HoustonScan (2005 — 2006)

From: kb5axx
Topic: 10121  Message: 10122

If Stafford's medic unit is out of service, they'll dispatch FB. As part of their standard procedure, the units called go over Staffords system while the FB dispatch operator is notified. Then the FB dispatcher puts out the call. It's not a duplicate call, it's just a matter of how the system works. It is the same thing as an automatic mutual-aid.

In an automatic mutual-aid scenario, such as when a box is dispatched, you will hear all of the companies assigned to the box even though some of those companies are dispatched through their own department. A typical box for a house fire in Stafford could be (Engine 2, Squad 1, Missouri City Engine 101, MC Reserve 32, Sugar Land Ladder 2, Sugar Land Engine 1, SL Batallion 1, Houston Tower 2).

You will generally hear all of those companies dispatched on Stafford's TG, but obviously the other departments will be dispatched through their TG.

Back to the original scenario that you described with FB: Why does it go over the air in Stafford if FB is only expected to respond? Because Stafford is a volunteer fire department, and one of the volunteers may be listening and willing to respond. If so, then he/she would get on the air and tell the dispatcher to add them to the record.

Topic: 10121  Message: 10124

Stafford does not operate an ambulance. It's all Ft Bend EMS. They do have a first responder unit but it doesn't transport patients.

Thanks, Marvin for that clarification. I know that I have heard "Stafford Medic" dispatched, but was unsure if that was for the Fort Bend medic housed in Stafford, or if they actually had one of their own.

From: tf6211
Topic: 10121  Message: 10131

Stafford works the same as Missouri City, Sugarland and most of FBC. FBCEMS provides the transport units and in three cases they have squads to provide first response. Stafford VFD is a volunteer department with paid day staff M-F 7-5. All three mentioned departments get dispatched by their own dispatchers and FBCEMS gets dispatched by FBC SO. In staffords case they do not actually dispatch units. They put out the call and address and availiable units respond. In the case of day crew hours the immediate response comes from station 2 and volunteers may respond from their station as well. (Day crew runs out of station 2) Their EMS first response units are called EMS 1 EMS 2 EMS 3. They also have a squad out of station 2. All three cities have ALS first response cabalities but still need FBCEMS for transport. Typically 911 calls hit the individual city dispatch first, they gather info and then transfer the call to FBC So for EMS dispatch. That is why you hear duplicate dispatch. Missouri City has been trying for years to put all of East FBC in one centralized dispatch center. In fact that is what the Missouri City dispatch center was built for, but as you can imagine, ego gets in the way.
Hope this helps,
Trey

It will only show up if you either transmit on the radio, in which case you
are asking for it anyway, OR if you have the radio setup to auto-affiliate
or to work in SMARTZONE mode.
When the radio auto-affiliates, it actually transmits to the control channel
that you are tuned to that particular talkgroup so you will hear it no
matter which site you are tuned to.
If you are not authorized to be using the STAR-Net system or any talkgroup
on it in particular, the system software will eventually find you and
possibly disable your radio.

# 10138. Re: [HoustonScan] Tropical storm soon to be hurricane Rita

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-20 00:09:24 UTC
From: Myles Barkman
Topic: 10129  Message: 10138

Houston OEM uses talkgroup 32944 on their city's trunk system.
Harris County uses 8336 on STAR-Net.
Neither really gets much use.
Galveston County has a few on their trunk system: 51664, 51888, 51952
Not sure what the differences are between all of them.
City of Galveston OEM uses 52880.

There is also the UHF PIES network on 450.5875 which is used by much of the areas media outlets, municipal OEM, and the weather service.
It doesn't get much use either besides the weekly radio check on Monday mornings.
But when the stuff hits the thing, they might start buzzing.

you can listen to it on echolink. I am not sure which node though. Also IRLP has a reflector for the Net.

If you have HF receive abilities....

The Ham radio Hurricane Net is on 14.325 MHz in Upper Sideband [USB] mode...

As for the locals.. I would like to know too...

Bow is right Just do an internet search on "hurricane frequencies" or check out:

http://www.hurricanefrequencies.com/

There was an increadable amount of action on the HF bands during Katarina. There still is quite a lot from time to time

I used an R75 with about 30 feet of hook-up wire strung the length of one of my hall ways and heard plenty. And to think the week before I was trying to sell that radio!

P.S. there is three on EBAY right now.

You're welcome. There's no Ft Bend medic unit based in Stafford. The nearest ones are Medic 3 (SW Freeway at Williams Trace), Medic 4 (Missouri City FD Station 1) and Medic 7 (Sugar Land FD Station 2). The only Fire Dept in Ft Bend County that has their own ambulance is Community VFD.

# 10145. RE: [HoustonScan] DPS repairs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-20 18:50:35 UTC
From: William Teed
Topic: 10104  Message: 10145

To be honest I really don't know how it supposley works and don't have the foggest idea other from the books I have read.
The reason I ask about a comerical radio is that to me it would be easier to get programed either threw Motorola as long as it is on rcv.
But the other problem is when I went to supposley Motorola dealer here in Houston all I got was a song and dance about it showing up on Sheriffs Department console and how some guy just got out of prison cause he had a Motorola I think he said maxon or something like.
Also, have any ideas of where I might be able to find a use 800mhz that can be reprogramed?

Yes. I presume that is 'Ambulance 1' as I have heard. Come to think of it, what I have heard in Stafford is not "Medic" but "Stafford EMS" --presumably the first responders that were mentioned in an earlier posting. I have been listening the these guys for a long time. Most of the time, I just learn by listening. But I do have a few friends that are firemen, and there's folks here on this list, like you, that have helped fill in the gaps.

# 10147. RE: [HoustonScan] DPS repairs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-20 21:15:04 UTC
From: Scott Royall
Topic: 10104  Message: 10147

Fair enough. At least you acknowledge your ignorance.

In a sense, STARnet is like the cellular telephone network run by, say, Verizon in a given area. A "talkgroup" is really nothing more than a virtual channel. I say it's virtual because it's not permanently mapped to any one frequency. That's where the "control channel" comes into the picture. Like the cell system, STARnet has a slew of tower sites scattered over the area. Each site has a gang of tunable repeaters controlled by an on-site computer. Said computer uses one of its repeaters as the "control channel" to broadcast which talkgroups are presently on that site, and the frequency each is assigned to use.

In addition, each site is in continuous contact with the central site. The computer at the central site, in addition to controlling that site, coordinates and relays audio between the remote sites. This is how a talkgroup can be simulcast from multiple sites. In practice, the system works predominately like its cellular cousin. Any member radio only needs to reach the site that it hears the best. The radio tells the site which talkgroups the user wants to hear. If it requests a talkgroup not already being carried on that site, the request is forwarded to the central site to make the arrangements to relay the talkgroup. All of this coordination happens in terms of milliseconds.

Maybe now you begin to grasp why buying any used radio is pointless. Just like a trunking scanner, it is limited to hearing whatever talkgroups that are currently available on the site you're listening to. It's not allowed to request additional groups, even if it knows how to. Every radio that interacts with STARnet must be authorized.

In practice, a good scanner is just as useful as long as you want to hear talkgroups that normally are used in your area. If you try to listen to talkgroups that cover distant areas, you'll only succeed when an authorized radio is also getting them through the site you're listening to.

(Yes folks, I simplified some aspects for this poor guy. Don't soil your panties.)

Subject: RE: [HoustonScan] DPS repairs

To be honest I really don't know how it supposley works and don't have the foggest idea other from the books I have read.

The reason I ask about a comerical radio is that to me it would be easier to get programed either threw Motorola as long as it is on rcv.

But the other problem is when I went to supposley Motorola dealer here in Houston all I got was a song and dance about it showing up on Sheriffs Department console and how some guy just got out of prison cause he had a Motorola I think he said maxon or something like.

Also, have any ideas of where I might be able to find a use 800mhz that can be reprogramed?

Scott Royall <royall@...> wrote:

Yes, it will. Do you know how trunking works?

Subject: Re: [HoustonScan] DPS repairs

I have a question I want to know if a comerical radio ( 800mhz two way ) be tuned to lifefight.

One of the last times I checked on it I got a song and dance about the radio Id showing up on the sheriff dept. console and indicated it was a stolen radio?

# 10148. 5pm EDT Rita Report

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-20 21:19:24 UTC
From: Peter Kirk
Topic: 10148  Message: 10148

NHC now states that Rita should be at Cat 4 Strength by 2 pm Eastern Time on Wed.

Rita projected to be in the Galveston area by 2pm Friday now!! Not Sat.

Best wishes to all List Members and there families in the Houston / Galveston Area.

Please be safe.

My Parents have already made plans to Evac from Galveston to the Dallas Tx. area on Thursday.

# 10149. Need Rita Advice...

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-20 22:20:53 UTC
From: Eric
Topic: 10129  Message: 10149

Hey, folks.
I've been in the Houston area since 1992, and amazingly, this is my first major storm. Sure, I dealt with Allison, but that was a TS, and mostly on the east side of the city.

I'm in Ft. Bend Co, right at the Harris Co. line, just south of Mission Bend. I figure it's a good idea to get the hell out of dodge and go visit Dallas, or even Alabama or Mississippi for a few days, starting Thursday. Unfortunately, my parents do not feel the same way. I'm stuck between a rock and a hard place, and will be unable to get out if they decide to stay (I simply don't have enough money to pay for gas/lodging).

I need some assistance in convincing them that leaving is potentially the right thing to do. Failing that, I need all the advice you can give me on protecting our ass-etts during the storm. Especially if you consider that we're only two blocks "above" (talk about your small slopes) Keegan's bayou (as it runs alongside Bissonnet).

So, help me out here, please.
I'd appreciate it.

Does any one have the TV audio freqs for Houston area stations.
I want to program a hand held scanner for use at work in the next few days. I work near the towers in Missouri city. Shoud be no problem to hear them.
Thanks for any fast help.

I would not be overly concerned. Sure visions of New Orleans are in our
heads right now. Your parents have weathered storms before. Standard precautions
should take us through this one if it actually makes it here. Remember New
Orleans was below sea level and actually bounded by large bodies of water
anyway. We dont have that problem here in Houston. I was amazed the first time I
traveled to New Orleans and was surprised to look up and see ships sailing
above me on the horizon!

As soon as I get power and internet back, I will.
The feed will be at http://www.fyreplace.com:12345

Until that time, I will be occasionally playing music and doing
voice-overs, talk, and chatter about my preperations for the storm, and
random crap. Stream will go up and down, randomly.

After Rita, if the situation warrants it in Houston, I'll scan the
hardest-hit areas (HPD/HFD and/or HCSO/FBCSO starnet), or set the
scanners to specific ops channels if there are any. Best I can do.

Anyone else who wants to set up a feed, if you can interface your
scanner with your computer and shoutcast it via winamp, I can set you up
a streaming server for it.

# 10157. HURRICANE RITA ADVISORY NUMBER 15

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-21 08:51:08 UTC
From: scanpadotcom
Topic: 10157  Message: 10157

Here is the 5am Sept 21, 2005 update

000
WTNT33 KNHC 210832
TCPAT3
BULLETIN
HURRICANE RITA ADVISORY NUMBER 15
NWS TPC/NATIONAL HURRICANE CENTER MIAMI FL
5 AM EDT WED SEP 21 2005

...MAJOR CATEGORY THREE RITA MOVING INTO THE SOUTHEASTERN GULF OF MEXICO AND CONTINUING TO STRENGTHEN...

AT 5 AM EDT...0900Z...THE TROPICAL STORM WARNING FOR PORTIONS OF THE FLORIDA KEYS IS DISCONTINUED EAST OF THE MARQUESAS KEYS...INCLUDING KEY WEST. A TROPICAL STORM WARNING REMAINS IN EFFECT FOR THE FLORIDA KEYS FROM THE MARQUESAS KEYS WESTWARD TO THE DRY TORTUGAS.

INTERESTS IN THE NORTHWESTERN GULF OF MEXICO SHOULD MONITOR THE PROGRESS OF RITA.

FOR STORM INFORMATION SPECIFIC TO YOUR AREA...INCLUDING POSSIBLE INLAND WATCHES AND WARNINGS...PLEASE MONITOR PRODUCTS ISSUED BY YOUR LOCAL WEATHER OFFICE.

AT 5 AM EDT...0900Z...THE CENTER OF HURRICANE RITA WAS LOCATED NEAR LATITUDE 24.3 NORTH...LONGITUDE 84.6 WEST OR ABOUT 175 MILES... 285 KM...WEST OF KEY WEST FLORIDA AND ABOUT 160 MILES... 255 KM... WEST-NORTHWEST OF HAVANA CUBA.

RITA IS MOVING TOWARD THE WEST NEAR 14 MPH...22 KM/HR...AND THIS GENERAL MOTION IS EXPECTED TO CONTINUE FOR THE NEXT 24 HOURS. THIS MOTION SHOULD BRING THE CENTER OF RITA FARTHER AWAY FROM THE FLORIDA KEYS OVER THE SOUTHEASTERN GULF OF MEXICO TODAY.

MAXIMUM SUSTAINED WINDS HAVE INCREASED TO NEAR 120 MPH...195 KM/HR...WITH HIGHER GUSTS. RITA IS A CATEGORY THREE HURRICANE ON THE SAFFIR-SIMPSON SCALE. STRENGTHENING IS FORECAST DURING THE NEXT 24 HOURS...AND RITA IS EXPECTED TO BECOME A CATEGORY FOUR HURRICANE SOMETIME LATER TODAY.

HURRICANE FORCE WINDS EXTEND OUTWARD UP TO 45 MILES... 75 KM... FROM THE CENTER...AND TROPICAL STORM FORCE WINDS EXTEND OUTWARD UP TO 140 MILES...220 KM.

ESTIMATED MINIMUM CENTRAL PRESSURE IS 956 MB...28.23 INCHES.

COASTAL STORM SURGE FLOODING OF 4 TO 6 FT ABOVE NORMAL TIDE LEVELS
IS POSSIBLE IN THE TROPICAL STORM WARNING AREA. STORM SURGE
FLOODING ELSEWHERE IN THE FLORIDA KEYS AND SOUTH FLORIDA SHOULD
SUBSIDE TODAY.

RITA IS EXPECTED TO PRODUCE ADDITIONAL RAINFALL ACCUMULATIONS OF 1
TO 3 INCHES OVER EXTREME SOUTHERN FLORIDA AND THE FLORIDA KEYS.
RAINFALL AMOUNTS OF 3 TO 5 INCHES...WITH MAXIMUM AMOUNTS OF 10
INCHES OVER THE HIGHER ELEVATIONS...ARE POSSIBLE OVER NORTHWEST
CUBA. RAINFALL AMOUNTS OF 1 TO 3 INCHES ARE POSSIBLE OVER THE
NORTHERN YUCATAN PENINSULA.

REPEATING THE 5 AM EDT POSITION...24.3 N... 84.6 W. MOVEMENT
TOWARD...WEST NEAR 14 MPH. MAXIMUM SUSTAINED
WINDS...120 MPH. MINIMUM CENTRAL PRESSURE... 956 MB.

AN INTERMEDIATE ADVISORY WILL BE ISSUED BY THE NATIONAL
HURRICANE CENTER AT 8 AM EDT FOLLOWED BY THE NEXT
COMPLETE ADVISORY AT 11 AM EDT.

FORECASTER BEVEN

Well, I use the term loosely since we only have 4 consoles at this time. However, when the city built our Public Safety Headquarters they made the dispatch room large enough to hold around 15 consoles. Maybe one of these days we will expand, but all we handle right now is our own PD and fire. In the next few years there will be more room for expansion due to the EOC building the city is building in the vacant lot adjacent to the Headquarters. It is budgeted to be completed by 2008, but they have to replace station 2 that will dissapear (Rita) this weekend first.

From: W
Topic: 10159  Message: 10169

Airlife Helos from San Antonio are en-route to the Houston/Galveston area to assist with medevacs. Airlife dispatch on 159.885 just informed that Airlife helos should monitor 122.850 and "air to air" when in the H/G area.

Note to folks in Houston - Airlife helos use 159.885 for flight following with SA base when they are high enough and within range.

# 10178. MCHD Tac 5

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-22 01:56:24 UTC
From: bpckty1
Topic: 10178  Message: 10178

Today, while leaving early from my Lake Conroe vacation for a "weekend date" with Rita this weekend, I heard the Ambulance Service supervisors discussing their new talkgroup, TAC-5, since they had units enroute to Galveston to assist in the evacuation. Interestingly, it is called Houston on their radios. They are on the HISD Williams Tower (probably others, too). Unfortunately, I was unable to monitor any new/different talkgroups, since it was during school bus drive time, and I didn't wish to have any need of the EMS services ;^> .

Ah, a new Quest...

Happy Scanning

Looks like I'm staying, folks.

My parents decided we're going to ride it out.
Wonderful.

*shrug*
Ah well.
c'est la vie.
I'll say re, once I get electric and 'net, again.

You guys are all over it. We can't slide anything past you. Yes, a couple new talkgroups on HISD Williams Site only. Connection made during the Reliant City episode. For EMS, we only have MED TAC 5 & 6 up.

Hope I didn't spoil your adventure.

Frank

From: Lisa
Topic: 10186  Message: 10186

I am in Baytown. our home is 146 in Cedar Bayou. 146 is our front door. We left earlier with full tank of gas but only made it about 20 miles away. We decided to come back or we would be stranded out on road right now. There are several of our neighbors who have had this same experiance. Some have made about 3 attempts. Just wanted to let everyone know what the situation is out here in Baytowm. We are listening to local news and radio. Main thing is I wanted to get the word out to people to let eveyone know that there are alot of neighbors in our area that are "trapped" at this point. We are hoping things can get better so we can try again to get out of here.

Yes it does apear that it is. We are hoping that over the next hours
that things will look better in our area. With some of the hwys
opening up and help with gas may give more of a chance too. It
would just be stupid to try agin "right now" or we would just repeat
ourselves. We are hoping ove the hours to come that we may can head
west and then north from there the best way we can.....if worse
scenerio (sp??) you may see us on national news breakinmg into a
building just to get into stronger shelter then our mobile home. I
promise you that we would not be stealing their tvs but just to get
into alot stronger structure then we are in now.....But that is
only last resort. We do at this time plan on leaving as soon as we
can. Lets hope that the storm will continue to turn. and that
people stranded in the traffic now get some kinda relief themselves.

In general they don't use a trunked system for MDTs. They work exactly like any conventional frequency pair, but send data instead of voice. Many MDTs these days though use cellular networks which is something else entirely.

We made an attempt Thursday morning to get to Belville and then take back roads to College Station, hearing how bad it was on 290.
We got as far as FM529 and Pitts Rd when the dire gas situation and no-flow traffic looked like a recipe for disaster.
We headed back to the Ellington area, figuring that we would also have to just hunker down and take our licks.

Was able to find a Conoco with gas so filled up our convoy and figured on new strategies.

Friday morning came with scant traffic reports, except to say it was bad on 45 going north.
Didn't look too bad on 290 though. Thought we might give it a shot.
Was able to bump someone on the Metro traffic repeater that said a friend of his had left Houston at 4:30am, dropped someone off at College Station, and continued to Austin and was there by now.
Based on this limited info, we decided to take a chance. If we hit bad traffic again, we would still be able to get back and resort to a shelter in Pasadena.

Let me tell you, the drive up to College Station was easier than some trips I've made up there. Half of the cars I saw on the road we those that were abandoned on the sides of the road that either overheated or ran out of gas.
I reported back to Transtar that they need to let people know that it was a good evacuaton route for folks to take since the Mayor

White was advising folks that if they hadn't left by now, that they shouldn't leave at all and chance being stranded.

There is no shelter space available up here and supplies are quickly being shopped (water, bread, milk, ice), but they have gas, and most people should be able to make it up here on a quarter or half a tank of gas.

Still don't know where Rita will make landfall and at what strength, but I'm glad I'm more than 100 miles from the coast instead of just 40.
We might experience what we typically get in a severe thunderstorm at worst. Just a much longer sustained straight line wind.

And at least I have some peace of mind that my daughter and dogs are safer.

Any of you that think you are still "stuck" down there, you can still get out, IF you have enough gas to get up here.

Good luck to you all down there and hope it doesn't turn west and strengthen any more.

Lisa, I mean no offense, but you did the same thing most evacuees did: over-reacted. It's a very difficult decision, but the simple truth is that more people evacuated than were told to, and they went further than necessary. I guess most people are just ignorant about hurricanes. Yes, they are big, bad, and never to be taken lightly. Yet, our local governments were much clearer than Louisiana about areas that needed to be evacuated. You were certainly in one of those areas, but not everyone needed to drive to Mars for safety. Katy, Tomball, even west Houston will be quite safe.

I do not want anyone to misunderstand what I am saying. Hurricanes must always be respected. They should also be understood for what they are, creatures depending on warm salt water. Once removed from that food source, they must begin to die no matter how big and bad they are. I lived in Baton Rouge for eight years so I somewhat understand why it faired better against Katrina than did New Orleans. Of course Katrina's final eastern jog didn't hurt, but Baton Rouge has about 60 miles of land protecting it from the Gulf. That's not absolute protection, as we're witnessing now. Yet, it does a pretty nice number on hurricanes. Again, referring to Katrina, she flattened the Mississippi coastline, but not 50+ miles inland. They definitely got damage, but from weather very much like the T-storms that accompany our "Blue Northers."

That's also what west Houston was likely facing even before Rita's plans changed. There will be nasty weather, absolutely, but the type we see every Spring and Fall, maybe a bit longer. Not everyone needed to go hundreds of miles, 50 west or northwest of landfall would assure survive. After you achieve that distant, it becomes a matter of spreading evacuees out to avoid the gridlock we saw. In short, by all means, get off the coast and out of mobile homes when a hurricane comes calling, but use common sense too. The rain will eventually visit the Mid-Atlantic states, but the hurricane winds rarely extend over a hundred miles.

There is no shelter space available up here and supplies are quickly being shopped (water, bread, milk, ice), but they have gas, and most people should be able to make it up here on a quarter or half a tank of gas.

Still don't know where Rita will make landfall and at what strength, but I'm glad I'm more than 100 miles from the coast instead of just 40.
We might experience what we typically get in a severe thunderstorm at worst. Just a much longer sustained straight line wind.

And at least I have some peace of mind that my daughter and dogs are safer.

Any of you that think you are still "stuck" down there, you can still get out, IF you have enough gas to get up here.

Good luck to you all down there and hope it doesn't turn west and strengthen any more.

Myles

# 10200. galveston fire

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-24 07:20:36 UTC
From: Rick Parrish
Topic: 10200  Message: 10200

From a reuters article ...

"A spectacular fire of unknown origin broke out in Galveston's historical center and quickly engulfed three buildings as firefighters struggled to put the blaze out in 60 mph (96 km) winds. Burning cinders swirled across the sky and on to the firemen, forcing them to stay well back."

# 10209. Barricaded suspect, HPD SW/Fondren 460.050

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-24 22:47:06 UTC
From: Eric
Topic: 10209  Message: 10209

HPD has barricaded suspect, don't know exactly what's going on, but suspect has barricaded himself inside a house, is threatening to shoot again. Hearing it on SW/Fondren, 460.050

Will try to find other information.

BTW HPD seems to be running out of units to handle calls.

# 10210. Any new trunk systems?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-24 23:54:32 UTC
From: niko627is
Topic: 10210  Message: 10210

I am about to get the Uniden BCD396T which has trunktracker IV technology, but that is a costly scanner and may soon be obsolete. Is there any news about some new technology that I should maybe wait on?

# 10211. Rita- FD related activity

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-26 02:37:36 UTC
From: Joe Gay
Topic: 10211  Message: 10211

Here's some news about Rita related incidents in Houston from Tom McDonald. Thanks, Tom.
Overnight Friday, as Rita was coming ashore, Houston had 8 working fires and several smaller structure fires. The 8 working fires included a 2-11 apartment fire in far SE Houston and a 1-11, 3 tap fire in southwest Houston. There were 2 mutual aid responses, a heavy box sent to Galveston for a fire on the Strand (see previous posts) and 2 engines sent to assist Pasadena with a strp mall fire. Mutual aid to either of those cities is unusual. The only time I can remember Houston going to Galveston was around 1976 when the Galveston grain elevator exploded.
Houston implemented reduced response on fires (2-3 engines, 1 laddder, 1 district chief). HFD also contracted with a private firm for 15 additional ambualnces. One Houston firefighter was added to the private ambulance crew of 2. Tom didn't mention it, but from my observations of Active Incidents and converstaions with those in Houston, it seemed like the volume of EMS calls was high.
The next few days could be interesting. As I recall, after Allison, there was an increased number of working fires.
Hope all of you on the coast made it through without loss.
Best wishes to our friends in La and with the NOFD.
Joe

# 10216. I'm baaaack!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-26 20:07:35 UTC
From: Myles Barkman
Topic: 10216  Message: 10216

Trying to get things back to normal. Was happy to see my power was back on
after being out for 57.5 hours.
Still need to clean everything out of the fridge/freezer.
Hearing Texas Task Force 1 ops on 153.815 MHz with PL 203.5. Their
operations are being linked possibly by satellite. There is a transmitter
in College Station as well where they are deployed from.

Listen to lots of helo ops on 128.850 MHz, 159.900.
DPS has been operating aircraft as well. 154.680 and 155.460 MHz.
Have also heard Civil Air Patrol on 148.150 MHz.

Wish I could play around more with the scanner and look for more stuff, but
I got to keep going forward with the house cleanup project.
No damage, just lots of twigs and no air conditioning.
Hope most of you fared the same.

# 10217. Re: [HoustonScan] Traffic Conditions 290

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-26 20:09:53 UTC
From: Myles Barkman
Topic: 10212  Message: 10217

Traffic was a bit heavier than I think it normally would be on Hwy 6 and 290
but it never stopped.
Looked like they had to detour some traffic from US 59 into Bryan on Hwy 21
and down 6 to 290. Made traffic in that area quite a bit heavier.
Don't know if that is still in place today.

after being out for 57.5 hours.
Still need to clean everything out of the fridge/freezer.
Hearing Texas Task Force 1 ops on 153.815 MHz with PL 203.5. Their
operations are being linked possibly by satellite. There is a transmitter
in College Station as well where they are deployed from.

Listen to lots of helo ops on 128.850 MHz, 159.900.
DPS has been operating aircraft as well. 154.680 and 155.460 MHz.
Have also heard Civil Air Patrol on 148.150 MHz.

Wish I could play around more with the scanner and look for more stuff, but
I got to keep going forward with the house cleanup project.
No damage, just lots of twigs and no air conditioning.
Hope most of you fared the same.

If you want to see what location they are reporting or where dispatch is advising the helo to go to, you can use maps.google.com and type the coordinates into the search bar.
Type the letter 'N' and then the latitude (north coordinate), then type the letter 'W' and the longitude (west coordinate).
Then you can zoom in or out to get the perspective you want.

Makes you wonder what Med TAC 4 is and on what system. I'm only aware of talkgroups up to TAC 3 for EMS on the MCHD EDACS system.

Wonder if they will keep TAC 5 & 6 in their radios for backup/Harris County ops.

Define best. :-)

You might want to consider a digital scanner. Or you might want to
wait to see what happens with 700 MHz.

You can power your BC780 off of a 12 volt lattern battery. I used to
run my shortwave radio that way during power outages.

Interestingly, it is called Houston on their radios. They are on the
HISD Williams Tower (probalbly others, too). Unfortunately, I was
unable to monitor any new/different talkgroups, since it was during
school bus drive time, and I didn't wish to have any need of the EMS
services ;^> .

# 10236. Help - after not using scanner for awhile

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-28 16:18:31 UTC
From: rfdillon
Topic: 10236  Message: 10236

Folks, I hadn't turned my scanner(Uniden BC245XLT)on for a couple of years until last week. The batteries charged right up, and I was in business!
I was wondering if anyone would have suggestions as to how to program this scanner. I'm sure that many talk groups and frequencies have changed over the last two years, and I'd like to monitor two areas: I work downtown, and I live near Breen and Fairbanks N. Houston, in Northwest Harris County.
I'd like to input the Harris County starnet frequencies, but it looks as though they have expanded greatly over the last couple of years. This scanner has 10 banks, and I think that I can input 30 frequencies per bank. I had it set up in the following way:
I dedicated the first few banks to the Starnet frequencies, then added talk groups that I thought might be pertinent to the Northwest side of town. I then had a few banks dedicated to the ~400 Mhz. range for the City of Houston Police, Fire, and EMS. I then had a few banks dedicated to the Montgomery county EDACS system. I can't seem to find any EDACS information, but I did download Miles' latest frequencies and a document detailing some of the Starnet talk groups, but it looked a little out of date.
Does anyone have any suggestions as to which frequencies, talk groups, etc. might be best to cover these two areas?
Which frequencies of the many Starnet towers should I use to cover these two areas(Downtown and Northwest Harris county, Jersey Village, etc.)? I thought that it would be convenient to set it up to dedicated 2-4 banks for Northwest Houston, and 2-3 banks for downtown, but certainly do appreciate any and all suggestions as to how to set up this scanner again, after so many months of inactivity.
Does the c245int still work with XP? I used to use it to control this scanner under Windows 98,and it worked fine.

Well, thanks again in advance for your help, and I look forward to joining into the scanning discussion after a long hiatus, thanks,
Richard

Hi William,
The Longitude has to have a "-" minus in front of it for example "-95 deg"

# 10245. Pt Arthur info

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-09-29 17:12:45 UTC
From: scasko@aol.com
Topic: 10245  Message: 10245

Pt Arthur PD has requested assistance from Houston PD, seems things are still really bad out there. We may be sending some help out there, the request is bouncing around the different Chiefs offices right now. Does anyone have any info about what the status of their radio system is these days? I'm doing some searching and it looks to be conventional wideband UHF (good for us) but I just want to make sure it's still up and running before we go programming a whole bunch of radios and get on the road.

Thanks,
Steve

Ouch, I was hoping they still had their UHF stuff up, that would have been
easy for us... Any idea if it's still in place? I doubt they'll have 30
extra radios per shift for us (but, with FEMA, who knows....).

Thanks,
Steve

Hi Steve,
I tried to contact my friend Anthony who's a dispatcher for PAPD, but haven't heard back from him. They haven't used UHF in over 10 years so I doubt that any of the patrol cars have UHF radios. They had given their old UHF radios to neighborhood watch groups, keeping one in the police station, but that was 10 years ago too.

Marvin,

A couple of things:

HPD owns very few trunk-capable radios.

You don't have any intel confirming that the trunk system is up. The last intel I heard was from a ham in Wildwood guessing they may get power back next week.

You may want to take your UHF radios with you incase their 800 system goes down. If it does you will still have simplex communications amongst yourselves atleast.

Oh yeah, we'll have that. If you had seen what I had loaded up for Rita
you'd know I don't travel light. Probably bring our own UHF repeater too, it'd
just be nice to talk to everyone at once....

Steve,,

I don't want to bust your bubble of optimism, but, when I visited Beaumont a couple of months ago, JeffCo SO was 800 Trunked Digital. So, unless they have switched back to analog, you won't be able to talk with them, unless they give you one or two of their radios.

Steve,

Sounds like one of your toys just came in very handy.

Can you cross-link your portable repeater to an 800 mhz trunked radio?

If the Port Arthur radio gurus can add a talkgroup ... all the Port Arthur dispatchers need to do is patch this talkgroup to one of their existing talkgroups. They wouldn't need to reprogram their own radios with this new talkgroup. I'm not telling you anything new here. I'm just wondering ... can the toys you have now do this?

It's not perfect. Your radios wouldn't get a busy tone when keying up on top of someone already talking on 800 mhz.

I'm guessing worst case is to loan a UHF mobile to the PAPD dispatchers.

Steve,

Sounds like one of your toys just came in very handy.

Can you cross-link your portable repeater to an 800 mhz trunked radio?

Probably not the repeater itself, but certainly a radio...

If the Port Arthur radio gurus can add a talkgroup ... all the Port
Arthur dispatchers need to do is patch this talkgroup to one of their
existing talkgroups. They wouldn't need to reprogram their own radios
with this new talkgroup. I'm not telling you anything new here. I'm just
wondering ... can the toys you have now do this?

Yes, or we could just patch whatever TG they are using to us. Just need to get one of their radios...

It's not perfect. Your radios wouldn't get a busy tone when keying up on
top of someone already talking on 800 mhz.

I'm guessing worst case is to loan a UHF mobile to the PAPD dispatchers.

We are planning on doubling up with their officers. Since we only had 1 radio per car here during the Rita activation it won't be any different out there. Whoever doesn't have the radio gets to yell....

JCSO and Beaumont FD are both P25, but they both have analog talkgroups. Beaumont PD is 100% analog. Pt. Neches/Pt. Arthur is 100% analog. Verified personally on a scanner field trip one week prior to Katrina.

He'll be dependent on loaner radios anyway, unless their sysadmins plan on handing out system keys.

I don't want to bust your bubble of optimism, but, when I visited
Beaumont a couple of months ago, JeffCo SO was 800 Trunked Digital.
So, unless they have switched back to analog, you won't be able to talk
with them, unless they give you one or two of their radios.

HFD's Tac 2 is not working. The repeater is just putting out noise. I then
heard OEC telling a unit that Tac 2 was down.

To Steve C. ... and anyone else interested in "Interoperability", you will want to read this ...

http://www.groklaw.net/article.php?story=20050916105216639

From the article ...

"All of the DHS operational agencies were worried. Owing to their different legacies and procurement processes, they all had their own distinct communications systems. The systems had all been developed and manufactured by large government contractors, and they were all closed in the tightest possible senses, both hardware and software. The systems were incompatible with one another. The software they used for handling email and documents was buggy and inadequate, and it ran on obsolete versions of Windows. It was virtually impossible to coordinate the user ends of the machines on a LAN. The vendors were completely unresponsive."

Regards,
Rick

> was in ASIA.

Here are some lat/lon basics ... (someone jump in if I've goofed something up) ...

Latitude +90.000 = the north pole (say "hi" to Santa) ... also written as 90 degrees North.
Latitude +45.000 (mid northern hemisphere) ... also written as 45 degrees North.
Latitude 0.000 = the equator.
Latitude -45.000 (mid southern hemisphere) ... also written as 45 degrees South.
Latitude -90.000 = the south pole ... also written as 90 degrees South.

Longitude 0.00 and Latitude 0.000 puts you on the equator in the Atlantic Ocean off the coast of Aftrica. If you are east of this (like Asia) you will expect to have a positive longitude. If you're west of this longitude (like North America) you'll expect a negative longitude.

Latitude 45.000 at -70.000 longitude (that's MINUS 70 degrees or 70 degrees WEST) puts you somewhere in the state of Maine.

Latitude 45.000 at +70.000 longitude (that's PLUS 70 degrees or 70 degrees EAST) puts you somewhere in southern Kazakhstan.

So ... changing the latitude (or longitude) from PLUS (east) to MINUS (west) can make a big difference.

Hey, are you 295 or 285? I was listening to Metro Traffic Thursday and one of the people on the channel said that HPD was going to Beaumont and wondered what ya'll were gonna use to talk to them. The other guy said that he had no idea, but that 295 (or 285) was going so it was going to get done. They said how 295 (or 285) was the best radio technician HPD has.

Any one heard about the roll over in Pasadena early Sunday morning about 2-2:30A/M?
Their was two PHI called out Med 5 & 7 ?
Also is anyone besides me having problem with their 800 mhz scanners, For some reason mine refuse to work right .
But will after the sun goes down and they want to seem to work right kind of funny I dont have that kind of problem with my 2mtr or 440 equipment.
Might it be that Im not to far from a cell tower the nearest one is allen -geona and richey?
OR maybe their just not working ( TG's)?

Need info-
What system are you having trouble picking up?
What frequencies do you have programmed in for that system?
Are there certain talkgroups in particular you are not hearing?
If so, which ones, and what system are you trying to hear them on?

# 10284. PSAP Lists for Harris County

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-02 22:50:24 UTC
From: Peter S
Topic: 10284  Message: 10284

I am trying to come up with a list of primary and secondary 911 Public Safety Answering Points (PSAPs) for Harris County. I have compared the Greater Harris 911 website info to the FCC PSAP Registry info.

Can anyone confirm that the following are secondary PSAPs? Cy Creek VFD - Meadows PD - Harris County Comm Center ?aka Greater Harris County ECD - Katy Fire - Harris County Sheriff - Cy Fair VFD - West I10 VFD.

Does anyone know who dispatches the following agencies - or how they receive 911 calls - SE VFD - NW VFD - El Lago PD - Alief VFD - Clearlake City EMS - Taylor Lake Village - Westlake VFD - El Jardin VFD

The primary PSAPs in Harris County seem to be - Baytown PD - Bellaire PD - Houston 911 - Deer Park PD - Harris County Neutral - Hedwig Village PD - La Porte PD - Lakeview PD - Meadows PD - Memorial Villages PD - Nassau Bay PD - Seabrook PD - South Houston PD - Southside Place PD - Webster PD - West University PD - Friendswood PD - Katy PD - Village FD - Village PD - Spring Valley PD - Jersey Village PD - Tomball PD - Humble PD - Galena Park PD - Jacinto City PD - Pasadena PD

---

my definitions

Primary PSAP = the first person to pick up the phone when you dial 911

Secondary PSAP - secondary PSAPs receive 911 phone callers that are forwarded from a primary PSAP

Calltaker - someone who takes info from a caller

Dispatcher - someone who gives that info to a public safety unit or units

Call forwarder - someone who answers 911 calls and forwards the calls to 2ndary PSAPs

---

Alief VFD might receive 911 calls this way - 911 call is answered by Houston County Neutral and then info is obtained from the caller - Harris County Neutral operator then places a phone call to Alief VFD, and gives the info to the Alief VFD dispatcher - the Alief VFD dispatcher then alerts the Alief VFD units - in this case, Alief VFD is not considered to be either a primary nor a secondary PSAP.

Confused yet?

Peter S Boston MA - trying to put together a short article for Scanning USA Magazine - once I get the 911 system figured out, I will try to match freqs to the PSAPs

Myles:
The starnet system Im trying to listen to is 2318-01 tg 21904 and it only seems to work only after dark if Im lucky and I have to listen to vhf fire for pasadena,as for the tg's i have put in the tg of 2318-23 and like I said it might work it might not...
So that tells me their is a problem of sum kind and with you not being to far from where I am you seem to have better reception ?
Whats your secert?

I'm 295, and this was a communcation challenge of the highest order!! I
snagged 30 Harris County radios that I had tucked away, ran them down to the
radio shop, and had them reprogrammed for the Pt. Arthur system. Ta-da...
Technology is great, but simple works well too....

I received some followup info - here are the primary PSAPs and some of their secondary PSAPs -

The primary PSAPs in Harris County seem to be - Baytown PD - Bellaire PD - Houston 911 - Deer Park PD - Harris County Neutral (CyCreek + HCEC + CyFair + West I10 are secondary) - Hedwig Village PD (Village FD is secondary) - La Porte PD - Lakeview PD - Meadows PD - Memorial Villages PD (Villages FD is secondary) - Nassau Bay PD - Seabrook PD - South Houston PD - Southside Place PD - Webster PD - West University PD - Friendswood PD - Katy PD - Spring Valley PD (Villages FD is secondary) - Jersey Village Emerg Services - Tomball PD - Humble PD - Galena Park PD - Jacinto City PD - Pasadena PD

---

Major outstanding questions are - who dispatches the following - Katy Fire - SE FD - NW FD - Alief FD - Barrett Sta FD - Beaumont Road FD - Clearlake City EMS - Westlake FD - Cloverleaf FD?

Does Lakeview PD cover El Lago and Taylor Lake Village?

Is McNair FD still self dispatched by their Fire Chief off a NEXTEL phone? (per their website)

Is El Lago covered by Pasadena FD?

Is Taylor Lake Village covered by Seabrook FD?

Does El Jardin FD still exists?

Peter S

SE FD and Clear Lake Area Medical Corps (CLEMC) are the same dispatch
center.
Cloverleaf is dispatched along with North Channel EMS by HCEC.

I volunteer for Community VFD (Alief VFD). We have our own
dispatchers and a 911 terminal. We cover an area that spans both
Harris and Fort Bend counties.

Hey, who won the election last fall for Providence? Are we still Fort Bend EMS, or did Community get it? Noone ever said.

From: James Sitton
Topic: 10284  Message: 10297

Waller County Sheriff Office dispatch covers EMS for parts of Harris County up to somewhere around Hockley. They can also forward other calls to Harris county dispatch. Is this what you mean?

Jersey Village uses 153.950 with 146.2 tone. They are only about 20 miles
apart. Seems like that would cause lots of interference.

The city of Brookshire dispatches Brookshire VFD, and they're on
153.95simplex either CSQ or with a
146.2 tone.

Didn't happen to catch the specific transmission you are referring to but Port Authority PD folks like to use it to BS sometimes.
Could be any agency though as everyone on STAR-Net should have the mutual aid talkgroups.
Lifeflight uses it often for ground contact.

Oh yeah, I assume you are talking about the talkgroup on the STAR-Net system.

I heard a dispatch on 37.26 this morning to an address in the
Brookshire area. But, it was very weak, and I did not capture a tone
or the nature of the call. It did go out as Brookshire Fire and EMS.

Jersey Village's system is weak. Also I belive Brookshire would be about 40-50 miles apart, more than 20. How many miles is it from I-10 at the Belt and Brookshire?

Nah, looks like about 25 miles when I check more closely.
About 10 miles to Grand Parkway and another 15 to JV.
Their dispatch is weak though. Doesn't need to get out too far.
Do they use it for station alerting or personal pagers or both?

From: Bow
Topic: 10309  Message: 10313

I listened to them as they flew in to Ellington today in their 9 plane formation...

Freq: 272.1000 MHz

It is cool to be able to step out, walk out on the ramp, and get front row seats to the practice air show... ;)

Tomorrow is known to be the most worthless day at work all year, everyone is standing out on the ramp watching the practice. LOL

...
Google Maps puts the distance from Brookshire to Jersey Village at
33.5miles.
...

I use distance as the crow flies. Crows won't fly down I-10 and then cut
north up the beltway.
Either way, it's still kind of close for two agencies to share the same freq
(that don't need to talk to each other).

But there are several instances of folks doing that around here, like:
Cy-Fair VFD and City of Baytown on 453.350 and 453.600
MD Anderson and Tomball PD on 453.525
City of Houston and Pearland FD on 453.850 (very close)
MD Anderson and Cy-Fair VFD on 453.975

I'm sure there are more examples.

More on Brookshire.
They are only licensed for three frequencies.
37.260 fire
155.580 police
158.9625 public works?
Anyone know what the 158.9625 is used for?
Appears to be local govt/public works kind of thing.
Is the police one still valid?

OK, got some good info tonight.
Still don't know the airboss freq but should get it tomorrow.
I was in a hurry and wasn't able to get Ch.10 on the staff radios.
Damn mosquitoes were vicious tonight!
Might have to catch that one later and report it.
And yes, you might notice something strange about Channel 5.
I've already alerted them about the problem. Who knows how far that will go.

The 272.100 freq for the Snowbirds appears to be a good air-air freq for them that has been recently reported in the last year or two.
I have included some other freqs for them that were probably good for past years.

Here's the location of the list so far. Yet to be complete...
http://home.houston.rr.com/freqzone/freqs/woh.html

p.s. I've been asked before not to publish the amateur radio freqs so I've opted not to publish them.
If you have heard them in the past few years, the freqs have not changed.

Will scanners be allowed this year? Last year the
security said you could not bring them in the airshow.
I saw several people wirh then who were not part of
the show. It would be nice to know if they are allowed
or not on the airshoww site.

From: Myles Barkman
Topic: 3256  Message: 10319

Got a hunch that perhaps Ch.10 is 467.925 MHz. Will see how this plays out.

As far as bringing scanners onto the field, I don't remember this being an issue last year. Although I typically have a fanny pack with water bottles that I stash the scanner in and then take it out later.
Maybe what you need is a speaker mic hanging off your shoulder that looks like it goes to your scanner. So many folks around there have two-ways that they probably wouldn't care.
I don't see why having a scanner is even as issue for them.
If they feel so strongly about the issue, they should include that in their list of banned items, which they don't. I happened to look for that earlier on their webpage just to check.
All it says in their FAQ is that they do not release freqs used by the airshow to the general public.
I'm not releasing it to the general public. Just people on HoustonScan.
See, that's different, right?

I do find it interesting that they say it is an FAA safety regulation that states you cannot watch the airshow from your car, even if you purchased a ticket. You must leave your vehicle and view the show from inside the airshow grounds.
The only reason I see the FAA should be concerned with this is if they think an aircraft could crash into the parking lot. What difference does it make?
I can't see how it is a safety issue.
Maybe it's that stinger missile you have in the trunk that isn't checked by security when you drive onto airport property.
Whatever.

Can someone call the number listed, 713-266-4492 and see about the scanner issue?

Heard a third-party call for an ambulance to respond to a residence near Strawberry and Fairmont in Pasadena for an approx 600-pound person that may have shot themself.
PD arrived first, cleared the house and yelled for the medics to come in.
Hadn't heard any more on condition of the patient.
Patient was transported to Bayshore via ambulance.
Usually, a call like this would be handled by Lifeflight but maybe there were weight constraints.
I think help was required from PD, FD and EMS to load patient.
Think it was a female friend that called 911.

Also, just a note to anyone going to the airshow, or trying to catch a peek from off the field (like myself), the winds will appear to switch from Saturday to Sunday. So low approaches will be from the south on Sunday, so the park near Clear Lake City Blvd and Hwy 3 will be a good viewing area on Saturday.
But the winds will be back from the southeast on Sunday so while the park is still "ok", if you want to be near the low approaches, I suggest the Shell station lot area at Genoa-Red Bluff and the Beltway.

Two nights of activity on that TG, Weds was several units surveilling a specific car. Followed it from the Richmond tower coverage into Clodine tower coverage. Thurs night more units tailing a vehicle.
No other traffic heard on it in SugarLand area.

I've been monitoring for the past few days. Here are my gleanings:

37.26, no PL, and it appears to be fire/ems dispatch. I live too far away to confirm, but it appears to be used by the field units, too. 155.5800 is difficult to monitor, since this frequency is shared by UTPD/MD Anderson. 158.9625 seems to be data or paging.

Ah, the quest.

# 10328. Updated PSAP List

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-07 21:02:30 UTC
From: hithel
Topic: 10328  Message: 10328

I think I have most of this sorted out. Firstly, 2 followup questions.

1. If you dial 911 from a cellphone in Harris County, who do you reach?

2. Do 911 calls from the Hockley and Waller area go directly to Waller County Sheriff - or do they go to Harris County Neutral who then forwards the info to Waller County Sheriff?

---

Primary PSAPs in Harris County (plus secondary PSAPs in parenthesis)

Baytown - Bellaire - Houston - Deer Park - Harris County Neutral (Sheriff + Cypress Creek + HCEC + CyFair + West I10 + Alief + ? Clearlake EMS/SE FD?) - Hedwig Village (Villages FD) - LaPorte - Lakeview PD (?Seabrook and Pasadena as 2ndarys?) - League City - Memorial Villages PD (Villages FD) - Nassau Bay - Pearland - Seabrook - South Houston - Southside Place - Spring Valley (Villages FD) - Stafford - Webster - West University - Missouri City - Friendswood - Katy - Jersey Village - Tomball - Humble - Galena Park - Jacinto City - Pasadena - ?Waller County Sheriff?

(I included any municipality that has land area in Harris County)

---

2ndary PSAPs

Cypress Creek dispatches - CyCreek EMS + CyCreek FD + Westlake FD/EMS + Klein VFD + Ponderosa VFD + Champions Area VFD + Little York VFD + Springs FD + NE VFD

HCEC dispatches - Atascocita FD/EMS + Cloverleaf FD + North Channel EMS + Channelview EMS + Highlands FD/EMS + Westfield FD + Aldine FD + Eastex FD + Huffman FD/EMS + Crosby FD + ESD5 + Southlake EMS + NW FD

CyFair dispatches - CyFair FD/EMS + Rosehill FD

West I10 dispatches West I10 FD + West Harris County EMS

Villages FD/EMS (is secondary PSAP to Memorial Villages PD + Hedwig Village PD + Spring Valley PD)

(Waller County Sheriff dispatches - Waller FD + TriCounty FD + ?NW EMS?)

(I tired to differentiate between FDs that run ambulances and those that dont.)

Corrections? or additions?

Where do 911 calls from Houston International Airport, Ellington Airbase, and NASA go?

Peter S

Hockley is in Harris County not Waller County. Now Waller County EMS who is dispatched by the Waller County Sheriffs Department runs the EMS up to Rosehill VFD's territory who is dispatched by Cy-Fair VFD. Confused yet? Here is the best part, Tri-County VFD (based in Hockley) is dispatched by the Waller County Sheriffs Department. I should be able to get an official answer as to who the PSAP is in that area, just give me a little time.

Erich

I goofed that up. That's what happens when I need to be on my way to work instead of trying to hurry up and play with email.

That should read "...low approaches will be from the south on SATURDAY..."

Since I'm writing though, got some more airshow freqs for y'all.

Primary Airboss is 124.900 MHz
Backup is 118.950
Discrete is 123.150

UHF freq is apparently the tower freq of 253.500. Airboss will not be using UHF air band.

Speaking of UHF, see if you can find any activity in the 413 MHz band. That is commonly used by military installations, and in particular, air force bases.

146.2 is programmed in, but all I get is the Sounds of Silence.
I've also tried 156.7, but no joy.

It must depend on what cell tower you hit. One time I was near Hockley. On Katy-Hockley about a mile or less south of US290 and saw a grass fire near a paint ball place. I dialed 911, I am not sure who answered but when I said fire was conected to Katy Fire dept. After trying to explain were I was and them not acting like they had any idea were I was, I asked it they could call Rosehill FD. Both FD showed up. Two days later I dove back that way and Cy-Fair had trucks out there were a where a huge log pile had caught fire.

Another time I saw a wreck closer to Waller in Harris county and Waller county answered and I had to be transfered to Harris County SO.

make sure that you are on MO (motorola) tunking for star-net talk groups. That is one promblem I had when I first started with the pro95. Hit Manual button and stop on the control channel. If it does not show MO on the top right of screen on the scanner it will not work right. Wrong choices are FM,ED,AM, If one of these show the press the MODE button (next to the bottom key on the left) untill it shows MO.

Believe that is Farley Rd or St (depending on what map you look at). I would have suggested that since it gets you very close to the runway but it is also right in front of a gate access I think. Don't know how they can chase you off a public roadway.

TG 23408 on the Hempstead Site mainly is active. I usually pick up at least a few transmissions on it every trip from Navasota to Houston. It is listed as Brookshire PD according to the RR Database.

Now that Brookshire PD is on Star-net TG# 23408 they may not use the
VHF PD freq much.

It not only depends on which cell tower, but which side. Cell sites have 3 sides, which can have different ESN's assigned to each side. Not perfect, but it was designed to help get you close to right agency.

While in the bank of STAR-Net press program then Trunk. In the upper right hand corner make sure there is a MO, if there isn't, press mode until there is.

From: Michael W. Jones
Topic: 10210  Message: 10345

I have the BCD396T. I can sum it up as this.

Rebanding - Not an issue, as this unit has flashable firmware (to which there have already been 2 updates since the unit was released in July.) Uniden has already committed to testing and releasing an update to support the rebanding as the rebanding process moves forward. Keep in mind only Motorola and APCO-25 require the update if being used in Control Channel Only mode. EDACS and LTR will have to be reprogrammed, but as long as the LCN's are known, it will not be an issue. Also, once the 700MHz band opens for public safety use, there is a promised flash update for the radio to support it as well.

If you prefer a base unit, the BCD996T was just announced, with a 1st Quarter 2006 release. Same basic features at the BCD396T, but adding GPS capabilities, along with better support for multi-tower (Read StarNET) Motorola Systems. Price will be comparable to the BCD396T.

I'm not sure what you mean by obsolescence, but this thing is definitely leading edge.

While ProVoice and LTR MultiNet are not supported, the closest users is San Antonio and College Station for ProVoice and Metro Operations for LTR MultiNet (and the likelihood of either proprietary protocol ever being supported is slim to none. I suspect with all of the interoperability issues that occurred with Katrina/Rita, there will be a new call for standardization back to conventional, APCO-16 (Motorola) and APCO-25 systems, so the usage of the proprietary formats for public safety will go away).

Brazos County and Bryan are on a APCO 25 Type II system
College Station is Analog Type II.
Only ProVoices I know of are San Antonio and Wichita Falls. I've heard that it may be used for some undercover ops in Montgomery County, but never have personally heard it myself.

Hi Mike,

As to how you set a control channel (into your scanner) depends upon the model of scanner that you have so I'll try to answer the first half of your question.

Trunked radio systems like the STAR-Net system that encompass Harris and surrounding counties use a control channel to broadcast control information to the users' radios - both mobile and portable radios. The information includes notification of new and on-going conversations. Each notification may carry four details ...

a. the radio id of a mobile, base, or portable radio currently transmitting (the sender)
b. the radio id or talkgroup id to which the above radio is speaking (the recipient)
c. the radio channel (other than the control channel) on which the conversation is taking place.
d. other additional details such as call type, encryption, priority, or emergency status of the call.

These radios - when turned on and silent - may seem to be doing nothing but are actually tuned to the control channel - listening for data addressed to the individual radio. The radio looks for notifications where the recipient ID matches the radio's configured talkgroup or the radio's individual ID. When a match occurs, the radio switches to the designated channel and un-mutes the speaker so that the user can hear. At the end of the conversation, the radio mutes the speaker and tunes (back to) the control channel for the any new or follow-on conversation.

You scanner - if it is a trunk-tracking variety - works almost the same way except it can handle a much larger list of talkgroups and of course is receive-only.

Beware that there are other types of trunked radio systems that do not use a control channel.

Use Google or Yahoo! to get a more thorough description than the one I just provided. Also, visit the Wiki pages on RadioReference.com for some good info (or just use Google which will inevitably link to the RR.com site).

Ha! Never have. These same agencies sometimes buy proprietary systems now.

# 10351. RE: [HoustonScan] Re: Any new trunk systems?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-11 04:17:16 UTC
From: Michael W. Jones
Topic: 10210  Message: 10351

Actually, my notes on the interoperability is from a press release related to testimony in congress on the matter:

https://us.etrade.com/e/t/invest/Story?ID=STORYID%3Detrade_2005_09_29_eng-etrade_cbs2_market_watch_eng-etrade_cbs2_market_watch_F1DEA8A0-E1D7-4128-8F8C-F377329458CE
<https://us.etrade.com/e/t/invest/Story?ID=STORYID%3Detrade_2005_09_29_eng-etrade_cbs2_market_watch_eng-etrade_cbs2_market_watch_F1DEA8A0-E1D7-4128-8F8C-F377329458CE&provider=PRNewswire> &provider=PRNewswire

Sorry folks, if the URL is broken by Yahoo!

Now, the above comments are definitely biased from the Big /\/\, and his testimony in the Senate Committee has not yet been heard (postponed), it will be interesting to see what M/A-COM has to provide at the hearing.

Link to session 1, it's testimony and video (Testifying: FCC, Department of Homeland Security, APCO, and National Institute of Standards)

http://commerce.senate.gov/hearings/witnesslist.cfm?id=1622

Link to session 2, with testimony and video after it's rescheduled (Testifying: Motorola, M/A-COM, Mobile Satellite Ventures and Iridium Satellite)

http://commerce.senate.gov/hearings/witnesslist.cfm?id=1628

So, yes I'm an optimist, but I know that sometimes the Government will get around to something good for all those involved. I just hope that between the testimony of APCO and other organizations it proves the point.

To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] Re: Any new trunk systems?

I have the BCD396T. I can sum it up as this.

Rebanding - Not an issue, as this unit has flashable firmware (to which there have already been 2 updates since the unit was released in July.) Uniden has already committed to testing and releasing an update to support the rebanding as the rebanding process moves forward. Keep in mind only Motorola and APCO-25 require the update if being used in Control Channel Only mode. EDACS and LTR will have to be reprogrammed, but as long as the LCN's are known, it will not be an issue. Also, once the 700MHz band opens for public safety use, there is a promised flash update for the radio to support it as well.

If you prefer a base unit, the BCD996T was just announced, with a 1st Quarter 2006 release. Same basic features at the BCD396T, but adding GPS capabilities, along with better support for multi-tower (Read StarNET) Motorola Systems. Price will be comparable to the BCD396T.

I'm not sure what you mean by obsolescence, but this thing is definitely leading edge.

While ProVoice and LTR MultiNet are not supported, the closest users is San Antonio and College Station for ProVoice and Metro Operations for LTR MultiNet (and the likelihood of either proprietary protocol ever being supported is slim to none. I suspect with all of the interoperability issues that occurred with Katrina/Rita, there will be a new call for standardization back to conventional, APCO-16 (Motorola) and APCO-25 systems, so the usage of the proprietary formats for public safety will go away).

Uniden hasn't committed to anything about rebanding, they say that they MIGHT be able to issue a firware update for the newer scanners but they are not sure as Motorola hasn't issued their bandplan yet.

# 10354. 154.280 keyed up

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-12 02:19:32 UTC
From: Myles Barkman
Topic: 10354  Message: 10354

Hear someone with a stuck transmitter in the southeast part of the county on 154.280 MHz.
The strongest I heard them was around 225 and Allen Genoa.
That would tend to make me think it is could most likely be Galena Park or South Houston.
It has a PL of 162.2 Hz which doesn't jive with either agency.
I heard it this morning on my way to work and I heard it again just now coming home so I guess it's been going on all day.
Could cause some interference for helicopter ground contact comms.
Guess we'll see if it's still going in the morning.
If it's a walkie or truck, the battery should be dead by then.
Doesn't sound strong enough to be a base station.
Got it about 1/2 scale at the house so I'm going with a truck at the station or someone's POV.
If I had time, it should be an easy fox hunt.

I suppose it could be coming from one of the plants along 225 in that area as well. Then it might be harder to gain access to the grounds to find the culprit.

# 10356. Police Call King Calls It Quits

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-12 02:56:38 UTC
From: Michael W. Jones
Topic: 10356  Message: 10356

Note - I saw this on a couple of another board, and thought it would be of interest to others as well. - Mike

Police Call King Calls It Quits
By Kevin Poulsen

http://www.wired.com/news/technology/0,1282,69133,00.html

02:00 AM Oct. 11, 2005 PT

It was the best day amid the worst years of Gene Hughes' life. He was 13 years old and seeking escape from the loneliness of a Los Angeles foster home by playing with an AM radio his uncle had mailed him.
Tuning around the dial, he picked up something different from the dance hall music and campy radio dramas that normally spilled from the tinny speaker -- something unexpectedly genuine. "I suddenly heard strange voices, women broadcasting addresses and numeric codes," he recalls.

He quickly figured out that he'd somehow tuned into Los Angeles Police Department dispatchers crisply directing the city's black-and-white police cars to real robberies, domestic disturbances and traffic accidents throughout the City of Angels.

That was 1940, nearly a half-century before shows like Cops would turn live police action into mass entertainment. And what might have sounded to someone else's ears like unwanted interference from a city transmitter, was to Hughes the pulsing music of an invisible world. He bought a map and started marking out the police calls with a pencil.
As he moved into adulthood, his interest only increased, and he invested in specialized radio receivers. "If they had the word, I guess you'd have called me a nerd," says Hughes.

But that nerdiness paid off. In 1964, in a bet with his wife, Hughes took all the information he'd accumulated -- call signs, frequencies and codes for police, fire, paramedics and other agencies -- and rolled it up into a 16-page manual titled Police Call.

It was the start of something big. Under Hughes' direction, Police Call would eventually expand into nine regional volumes covering the entire continental United States, with a peak circulation of a half- million copies. Updated annually, it would sell countless thousands of radio scanners and play a crucial role in incubating and growing the hobby of radio monitoring, which traces a line from the cop watchers of the 1970s to the railfans of the '90s and the NASCAR dads of today.

Along the way, Police Call would help spawn local and national clubs and organizations, spark brushfire controversies over information disclosure,

and turn Gene Hughes -- a pen name -- into a household word among scanner buffs and anyone who spent too much time at Radio Shack when they were kids.

Last month, Hughes, now 77, announced he was closing down Police Call after 41 years. Radio heads call it the end of an era. "He's a giant in the hobby," says Peter Laws, 42-year-old scanning buff and founder of a popular e-mail list dedicated to monitoring. "I'm not saying there would have been no hobby without him, but the hobby would have been very different without him."

It began with a bit of marital banter. Confronted with Hughes' compulsion to gather and organize information on Los Angeles' radio spectrum, his wife, Mitzi, pointed out the obvious. "She said, 'You're doing the stupidest thing in the world,'" recalls Hughes. "I said, 'I bet people would pay for this.'" That first edition of Police Call sold 800 copies through a Southern California radio shop. Mitzi did the cover art -- a sketch of a police car and a fire truck with lightning bolts radiating from their antennas. "I never imagined there would be a second copy," says Hughes.

But there was a second edition, then a third and a fourth. The book continued as a Southern California phenomenon for the better part of a decade. Then, in 1973, Hughes teamed up with a computer jockey named George Switlyk who knew how to crunch the opaque FCC frequency databases into meaningful data, and the pair began banging out nine national editions covering nearly the entire country.

Their timing was impeccable: Three years later, the first programmable scanners hit the consumer market, and cracked it wide open.

Before then, the most flexible monitoring equipment differed little in operation from a transistor radio -- if you wanted to listen to the sheriff's department, you'd manually set the dial to the department's dispatch frequency, and rest it there. Alternatively, you could use a scanning receiver capable of cycling through different channels, but you needed separate, pre-cut crystals attuned to each frequency.

While crude by today's standards, the first programmable scanner, sold by a now-defunct company called Tennelec, was a breakthrough: It could be programmed on the fly to monitor up to eight different channels, rapidly cycling through them, stopping wherever it picked up a transmission, then moving on again. No crystals required.

It was Headline News where only CBS had been; RSS instead of HTTP. Here, a cop runs the license plate of a suspicious car; there, a paramedic radios the emergency room that they're rolling into with an accident victim; a moment later a fire dispatcher summons two more engines to a downtown blaze. Back to the cop and the driver has a warrant and someone's going to jail.

The scanner was a hit at the 1976 Winter Consumer Electronics Show in Chicago. But it was clear that people were going to need information to go

with the new gadget: a TV Guide, of sorts, for reality media. A buyer for the Fort Worth, Texas-based electronics chain Radio Shack figured it out quick, and hunted down Hughes on the show's floor.

"Are you still printing that book of frequencies?" Leon Lutz asked in a Texas drawl. Hughes said he was. "Well, I guess I gotta buy some," Lutz said.

Radio Shack had 2,000 stores in shopping centers and strip malls around the country, and the company was going into monitoring in a big way -- it would soon have its own line of programmable scanners. The company's first purchase order for Police Call was for 65,000 books, says Hughes, more than seven times his previous print run. "I remember opening that envelope and, wow, the excitement lifted me off the floor."

Hughes and Switlyk would sell the books through Radio Shack for years to come.

"The scanners helped sell the book and the book helped sell the scanners," says Paul Opitz, former product development director for Radio Shack. "Drop either one out of the equation and the numbers go down significantly. It was a very nice symbiotic relationship."

But law enforcement agencies weren't used to the public listening in, and Police Call courted controversy from the beginning. "There were a lot of police that did not want their frequencies known," says Hughes. "I'd tell them they could go down to the FCC and see them."

Hughes voluntarily omitted some frequencies that he thought particularly sensitive, like FBI and Secret Service channels, but he says he never cut a frequency under external pressure. Crooks, of course, were delighted with scanners, and with Police Call. "People sent me several clippings where the police broke up burglary rings, and right there in the picture you could see my book sitting on the table," Hughes says with a chuckle.

Several states passed laws against driving with a scanner -- statutes that remain on the books today, but are rarely enforced.

But the typical scanner owner isn't a criminal. And if the very term police scanner summons an acrid flavor of dangerous isolation -- the whiff of neighborhood busybodies, cop wannabes and weird shut-ins -- the reality is broader: sports fans, airplane buffs and off-duty emergency workers have all found scanners useful.

When, 15 years ago, Hughes hinted he might stop publishing railroad frequencies, he was deluged with mail from railway aficionados -- a reader base he didn't even know he had. Today, scanners are must-have items for many NASCAR fans. "Being able to listen to the dialogue between the pit crew and the driver really adds a lot to the race," says Opitz, who's now a product manager at scanner giant Uniden and uses a scanner in his weekend sport of tornado chasing.

With each edition, Police Call had more information to track (recent editions have included CD-ROMs). Advancing technology allowed electromagnetic spectrum to be handled in thinner slices, which meant more channels to go around.

At the same time, radio systems became more complicated over the years, forcing costly upgrade cycles on listeners. Cities began adopting systems that used "trunking," a computer-controlled technique for making efficient use of frequencies, which rendered old scanners obsolete. Digital radio required even newer, fancier electronics to intercept. The encrypted transmissions now being used in some areas make monitoring arguably impossible, and, for the first time, definitely illegal.

"It's switching over so fast," says Hughes. "If you look at the major cities, they've almost all switched to trunked, and they're switching to digital every day.. Orange County is not only digital, it's encrypted, which of course by law you can't listen to."

That, says Hughes, is why the 2005 edition of Police Call will be the last: Scanning is a waning pastime; people are put off by the growing complexity and cost. The internet has also been bad for the hobby, the way it's bad for all hobbies, Hughes says -- because it's an attractive diversion. (Still a technophile, Hughes has been on the net since before the web).

But he admits that he really lost his love of the home business when Switlyk, his friend and business partner since the 1970s, died in 2000 of heart failure. "Broke my heart," he says. "We had a partnership that kept going for over 20 years."

Hughes and Mitzi celebrated their 50th anniversary last year. Hughes says he has no plans to pass Police Call on to someone else -- his children and grandchildren don't want it -- nor will he offer to sell the Police Call title to Radio Shack, which has announced no plans for a replacement book. Indeed, the web is a trove of resources for scanner buffs, from frequency lists to streaming audio feeds of radio traffic, making printed frequency books less important than they once were. Scanning buff Laws admits he hasn't bought Police Call since 2000.

But Radio Shack says it's sorry to see the book close. "There were many resources that attempted to compete with the callbooks," says Radio Shack buyer Wayne Wilson in an e-mail. "But for a long time, the callbook was the only resource that translated endless FCC database entries like Motorola into the actual services that were on those frequencies. No other resource I know of accomplished that. I can tell you over the years we turned down many vendors selling nothing more than the FCC database on CD."

Hughes says the company even asked him to reconsider his retirement during the Hurricane Katrina rescue efforts -- which likely produced the greatest concentration of emergency radio traffic in recent U.S. history. "I'm getting reports that the books are selling like crazy," he says. "They said, 'Will you print any more?' I said, 'Nope.'"

Of course, at 77, Hughes is allowed to retire -- if that's what you want to call it. He retired from his day job in commercial two-way radio in 1987, but 10 years ago accepted a volunteer assignment as a specialist reserve police officer for the LAPD. He's worked 20 hours a week at the front desk of the department's Wilshire Station ever since.

And when he comes home, he goes to his bank of scanners and tunes in, just as he did 65 years ago -- with some differences. "I make sure that my scanner is picking up the Wilshire Division," he says. "I hear a call go out, and I know everybody now. I say, 'Hey, that's Bailey rolling out on that call.'"

Police Call King Calls It Quits
By Kevin Poulsen
Story location: http://www.wired.com/news/technology/0,1282,69133,00.html

02:00 AM Oct. 11, 2005 PT

It was the best day amid the worst years of Gene Hughes' life. He was 13 years old and seeking escape from the loneliness of a Los Angeles foster home by playing with an AM radio his uncle had mailed him. Tuning around the dial, he picked up something different from the dance hall music and campy radio dramas that normally spilled from the tinny speaker -- something unexpectedly genuine. "I suddenly heard strange voices, women broadcasting addresses and numeric codes," he recalls.

He quickly figured out that he'd somehow tuned into Los Angeles Police Department dispatchers crisply directing the city's black-and-white police cars to real robberies, domestic disturbances and traffic accidents throughout the City of Angels.

That was 1940, nearly a half-century before shows like Cops would turn live police action into mass entertainment. And what might have sounded to someone else's ears like unwanted interference from a city transmitter, was to Hughes the pulsing music of an invisible world. He bought a map and started marking out the police calls with a pencil. As he moved into adulthood, his interest only increased, and he invested in specialized radio receivers. "If they had the word, I guess you'd have called me a nerd," says Hughes.
But that nerdiness paid off. In 1964, in a bet with his wife, Hughes took all the information he'd accumulated -- call signs, frequencies and codes for police, fire, paramedics and other agencies -- and rolled it up into a 16-page manual titled Police Call.

It was the start of something big. Under Hughes' direction, Police Call would eventually expand into nine regional volumes covering the entire continental United States, with a peak circulation of a half-million copies. Updated annually, it would sell countless thousands of radio scanners and play a crucial role in incubating and growing the hobby of radio monitoring, which traces a line from the cop watchers of the 1970s to the railfans of the '90s and the NASCAR dads of today.

Along the way, Police Call would help spawn local and national clubs and organizations, spark brushfire controversies over information disclosure, and turn Gene Hughes -- a pen name -- into a household word among scanner buffs and anyone who spent too much time at Radio Shack when they were kids.

Last month, Hughes, now 77, announced he was closing down Police Call after 41 years. Radio heads call it the end of an era. "He's a giant in the hobby," says Peter Laws, 42-year-old scanning buff and founder of a popular e-mail list dedicated to monitoring. "I'm not saying

there would have been no hobby without him, but the hobby would have been very different without him."

It began with a bit of marital banter. Confronted with Hughes' compulsion to gather and organize information on Los Angeles' radio spectrum, his wife, Mitzi, pointed out the obvious. "She said, 'You're doing the stupidest thing in the world,'" recalls Hughes. "I said, 'I bet people would pay for this.'" That first edition of Police Call sold 800 copies through a Southern California radio shop. Mitzi did the cover art -- a sketch of a police car and a fire truck with lightning bolts radiating from their antennas. "I never imagined there would be a second copy," says Hughes.

But there was a second edition, then a third and a fourth. The book continued as a Southern California phenomenon for the better part of a decade. Then, in 1973, Hughes teamed up with a computer jockey named George Switlyk who knew how to crunch the opaque FCC frequency databases into meaningful data, and the pair began banging out nine national editions covering nearly the entire country.

Their timing was impeccable: Three years later, the first programmable scanners hit the consumer market, and cracked it wide open.

Before then, the most flexible monitoring equipment differed little in operation from a transistor radio -- if you wanted to listen to the sheriff's department, you'd manually set the dial to the department's dispatch frequency, and rest it there. Alternatively, you could use a scanning receiver capable of cycling through different channels, but you needed separate, pre-cut crystals attuned to each frequency.

While crude by today's standards, the first programmable scanner, sold by a now-defunct company called Tennelec, was a breakthrough: It could be programmed on the fly to monitor up to eight different channels, rapidly cycling through them, stopping wherever it picked up a transmission, then moving on again. No crystals required.

It was Headline News where only CBS had been; RSS instead of HTTP. Here, a cop runs the license plate of a suspicious car; there, a paramedic radios the emergency room that they're rolling into with an accident victim; a moment later a fire dispatcher summons two more engines to a downtown blaze. Back to the cop and the driver has a warrant and someone's going to jail.

The scanner was a hit at the 1976 Winter Consumer Electronics Show in Chicago. But it was clear that people were going to need information to go with the new gadget: a TV Guide, of sorts, for reality media. A buyer for the Fort Worth, Texas-based electronics chain Radio Shack figured it out quick, and hunted down Hughes on the show's floor.

"Are you still printing that book of frequencies?" Leon Lutz asked in a Texas drawl. Hughes said he was. "Well, I guess I gotta buy some," Lutz said.

Radio Shack had 2,000 stores in shopping centers and strip malls around the country, and the company was going into monitoring in a big way -- it would soon have its own line of programmable scanners. The company's first purchase order for Police Call was for 65,000 books, says Hughes, more than seven times his previous print run. "I remember opening that envelope and, wow, the excitement lifted me off the floor."

Hughes and Switlyk would sell the books through Radio Shack for years to come.

"The scanners helped sell the book and the book helped sell the scanners," says Paul Opitz, former product development director for Radio Shack. "Drop either one out of the equation and the numbers go down significantly. It was a very nice symbiotic relationship."

But law enforcement agencies weren't used to the public listening in, and Police Call courted controversy from the beginning. "There were a lot of police that did not want their frequencies known," says Hughes. "I'd tell them they could go down to the FCC and see them."

Hughes voluntarily omitted some frequencies that he thought particularly sensitive, like FBI and Secret Service channels, but he says he never cut a frequency under external pressure. Crooks, of course, were delighted with scanners, and with Police Call. "People sent me several clippings where the police broke up burglary rings, and right there in the picture you could see my book sitting on the table," Hughes says with a chuckle.

Several states passed laws against driving with a scanner -- statutes that remain on the books today, but are rarely enforced.

But the typical scanner owner isn't a criminal. And if the very term police scanner summons an acrid flavor of dangerous isolation -- the whiff of neighborhood busybodies, cop wannabes and weird shut-ins -- the reality is broader: sports fans, airplane buffs and off-duty emergency workers have all found scanners useful.

When, 15 years ago, Hughes hinted he might stop publishing railroad frequencies, he was deluged with mail from railway aficionados -- a reader base he didn't even know he had. That could be the FCC one because Paul has said on RR that he didn't exactly know if the scanners would work after rebanding until after the first system has been up and running because Motorola hasn't issued their bandplan yet.

That's too bad. Can't blame him though.
I haven't bought a new one since 1999, and skipped a few before that. Don't remember when I got my first one but I got one every year. Was probably 1984, 85 or 86.
Remember scanning before trunking? 800 MHz was just starting to be used when I started.

Ever since I could get the FCC data off the web, it wasn't as useful and as up-to-date.
Sort of like the days of having to get the amateur radio callsign books (I might still have the one I got when I was licensed in '86).
I still like to go back and refer to some of the data in the Police Call book when I want to see what agencies USED to use, because sometimes, they either don't stop using them, or they sell the radios to someone else nearby. The info won't get deleted from my book like it will from the FCC database.
Might have to go out and get that last one.......just to have that last one.
He and his book were very instrumental in my hobby the first 10 years.

It's still going, and with the same signal strength. So much for battery power.
It has stumped me though, since I drove south on Allen-Genoa to Spencer and it never really got strong.
So don't think it is South Houston.
Don't think it's Galena Park either, it wasn't too impressive at 610 and Clinton.

So what about the Bracewell fireboat at the end of S Main St south of Galena Park?
Either that or one of the plants in that area.
Anyone know someone with the Port Authority?

You'd have to back the clock up ten years for my start in the hobby. I suppose I began before there were scanners per se. Anyone else here remember the infamous Pro-3B? Somebody loaned me one of the first Tennelecs, and boy, was it full of images. I've had numerous scanners over the years, mostly Radio Shack junk starting with the first Pocket Scanners. Back then, 800 MHz and trunking were just theories. My first wife-to-be worked at Pizza Hut, and used layaway to buy my first 10-channel synthesized hand-held. It was actually among the most reliable. I didn't touch Uniden until the BC-210.

It wasn't until I returned to Houston and HCSO abandoned VHF that I discovered the mixed blessing of trunking. I still have that PRO-92, and remember the continued hassle of trying to stay up with the changing pool of trunk frequencies. That's also about when I discovered Myles, around 1996 or so.

Moved here and the only Life Flight here comes from Pensacola Hospital . their on 453. and I can hear them a lot better then the tg 21904 their but also found out that they also use the GPS as well....
And thanks for the google it has really helped me a lot

You got into the hobby late. Started in '64 while installing radios in Ft Worth for the TCSO and others. Did have a SBE Optoscan instead of the Tennelec. Like the idea of many cards so I could change up the scanner.

The Bearcat 210 was not made by Uniden but Bearcat themselves. I think that was about the last of the true Bearcat's though with the exception of a few handhelds and crystal radios. They were based in Indiana while Uniden is out of Ft Worth and no, they only sell radios to Radio Shack along with GRE.

Gene Hughes never existed. It was a pen name that he used all these years. Richard Barnett was the publisher the last few years. Remember the little booklet that came with a few of the Uniden Scanners when they first entered trunking, that was his little deal.

Currently Norm Shrein is the one working with Radio Shack on their programmed frequencies along with Uniden.

If you have a scanner that will allow you to adjust the base and offset of the Motorola Trunk system then you will be able to monitor the bandplan at first. Later when everyone switches to 700 MHz then that is another story. You can bet Uniden will extract a few more dollars from you pocket regardless. Remember the 3600 and 9600 systems. Why no, you have to purchase a new scanner for the 9600 systems.

Does anyone have any info on PHI Airmed 1 and Airmed 6? Think the helos were moved to Oakbend and Fort Worth, from Conroe and Corsicana respectively.
Looking for tail numbers.
Info I have so far:
http://home.houston.rr.com/freqzone/freqs/PHIairmed.txt

While we are at it. I saw a flight of 3 helicopters traveling east over bayshore medical center possibly going towards LaPorte. What got my attenetion was that all 3 helicopters had the inflatable skids (similar to PHI 5) and a similar paint scheme.

Does anyone have a pasadena live scanner feed up.

# 10389. Re: [HoustonScan] Re: Pasadena Fire 2-tone page info

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-17 23:31:25 UTC
From: Myles Barkman
Topic: 10352  Message: 10389

OK, just recorded and analyzed the tones from the receiver test at 6pm.
All tones are standard two-tone Motorola/EIA pager tones.
The second part of the tone is the same for all stations and is 349.0 Hz.
The first part of the tone distinguishes the particular station as stated
below:
Station 2 - 368.5 Hz (there is no station 1)
Station 3 - 389.0 Hz
Station 4 - 410.8 Hz
Station 5 - 433.7 Hz
Station 6 - 457.9 Hz
Station 7 - 483.5 Hz
Station 8 - 510.5 Hz
Station 10 - 539.0 Hz

They do not do a check for Station 9. Perhaps because it is seldom used or
staffed. I really don't know.
If I had to guess at a particular tone that they may use for it, the next
logical tone after 10's would be 569.1 Hz.
I have no idea how you program those new fancy scanners to use the two-tone
feature.
If you need another type of frequency designation for the tones, let me know
and I'll list those as well.

Thanks alot for the info. Just FYI station 9 is basically a branch of station 6 and runs the same calls as 6. The only other tone I would like to know is the general tone. I was thinking it may be the same as the second tone to alert all pagers. Did you record the initial tone?

Thanks alot.
Niko

# 10391. Re: [HoustonScan] Re: Pasadena Fire 2-tone page info

Yahoo group: HoustonScan (2005 — 2006)

From: Myles Barkman
Topic: 10352  Message: 10391

I wondered if nine's was just alerted by another station page.
I think the general tone is just a long version of the second 349.0 Hz tone.
FYI, during station alerting, the first tone lasts 1 second, and the second tone lasts 3 seconds.
The general tone may last at least five seconds.
I didn't catch the initial tone at 6pm.

Thanks again, and yes Station 9 works with the same tones as station 6.

Myles, if you were wanting to know how to set the new scanner for fire tone outs, check out the manual for the BCD396: http://www.uniden.com/pdf/BCD396Tom.pdf

If you go to page 116 it explains all about the tone outs and what it needs to be programmed. ALthough I do not have the BCD396 yet, I like to know all about how it works.

Glenn:
From the sound of it your one of the crew members on board one of the birds. But here is a question for you .
Do you know if PHI Airmed has a bird based over in Fairhope Alabama? Reason I ask is I was out running the roads heading to a headon wreck in Barnwell and just happen to look over and saw it at sitting in the private airport?
And if so would it be possible to find out the dispatch freq.for it .
Thanks in advance

There are no PHI Med birds based in Alabama. We have an oil and gas base in Theodore, AL. The paint schemes are fairly the same for ems as for the O&G birds except for our tradional hospital based programs. Freqs for Theodore are 128.95 local and 132.00 for the offshore blocks.

I'm a firefighter in Fort Bend, we were told that PHI moved out of Oak Bend months ago. We heard that Lifeflight was making the PHI birds orbit at Herman while the Lifeflight birds crews ate, only after there was a clear pad could the pilot pick his crew up and return to base. There was supposedly also other politics at work, but we had been informed about 4 mo ago that PHI was no longer at Oak Bend. Please correct me if I'm wrong. -BT

From: Marvin Suggs
Topic: 10381  Message: 10412

Hi Brad,
They went back to Oak Bend just a few days ago as PHI Med 9. Oak Bend built a 2nd helipad just for them and made other concessions, also telling Lifeflight that all transfers out of Oak Bend will be handled by PHI. So PHI now has a helo in service at Oak Bend and is making calls in Fort Bend and surrounding counties.

I called both Frys on 45N and 45S (in Webster) and they both do not carry the 396. The one on 45N does have the 246 but thats it.

# 10418. Re: [HoustonScan] Re: Brookshire

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-21 20:01:14 UTC
From: James Sitton
Topic: 10316  Message: 10418

I wonder could it be a input to a repeater. It is very close to the Split for The new Vhf Repeater (a couple of years ago) that Waller County is letting run idle with almost no use.

146.2 155.9325/158.7475*SHERIFF Waller Co. (mostly SO units)

Brad Dwight <fsvfd433@...> wrote:
Myles- 158.9625 is probably Brookshire Water. -BT

bpckty1 <bpckty1@...> wrote: I've been monitoring for the past few days. Here are my gleanings:

37.26, no PL, and it appears to be fire/ems dispatch. I live too far
away to confirm, but it appears to be used by the field units, too.
155.5800 is difficult to monitor, since this frequency is shared by
UTPD/MD Anderson. 158.9625 seems to be data or paging.

Ah, the quest.

Call the Dept HQ and ask where they order the pagers / radios from, then call them up as they would have all the tones info.

Peter

# 10428. Re: [HoustonScan] ...this is going to sound strange...

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-22 11:02:11 UTC
From: Eric
Topic: 10424  Message: 10428

Yeah.
Feel anything, though? heh.
Guess not.
*shrug* Who knows what it was.

# 10430. Program cable

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-23 02:48:08 UTC
From: kd5rue
Topic: 10430  Message: 10430

I am looking for a program cable for the BC250D! Please!

# 10431. Deer Park to STAR-Net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-24 23:13:17 UTC
From: Myles Barkman
Topic: 10431  Message: 10431

Appears the migration from the old Pasadena trunk to STAR-Net is coming
closer to completion.
Just heard during Deer Park FD's tone testing tonight that all members need
to get their radios turned in by 8am Tuesday to be reprogrammed.
Don't know about PD or city services.
Think SoHo PD is still on the old system too.
Might need to run T4Win tomorrow.

# 10434. RE: [HoustonScan] Re: Deer Park to STAR-Net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-25 05:22:15 UTC
From: Peter Kirk
Topic: 10431  Message: 10434

Trunked for windows (T4win)

It is a Windows program like Trunker / Etrunker (both DOS) that use a Data Slicer connected from the computer to a Discriminator Tap in your Scanner. It decodes the Data traffic from the Control Ch. Used in Trunked Radio Systems.

Do a Google search for T4WIN, Etrunker, Trunker, Mtrunker, ect.... The programs are free.

Peter

Minute Maid roof to stay open for World Series

By Andy Cerota
(10/25/05 - HOUSTON) - Major League Baseball ordered the roof open at Minute Maid Field for Game 3 of the World Series on Tuesday night, ignoring the wishes of the Houston Astros.

Jimmie Lee Solomon, executive vice president of baseball operations in the commissioner's office, made the announcement at Minute Maid Field about four hours before the scheduled first pitch. It was 71 degrees and the sky was cloudless when Solomon spoke.

"It's a beautiful day," Solomon said. "This is not unprecedented. It happened in 2001 down in Arizona. The roof was open all four games there."

The Astros like playing with the roof closed because, among other things, it increases the noise.

Solomon said the commissioner's office followed the Astros' regular-season guidelines, which call for the roof to be open when the temperature is under 80 degrees and there is no rain.

"I think it's a disregard to our fans, the comfort of our fans," Astros manager Phil Garner said.

Solomon said the roof is likely to be open for all games in Houston this week.

Perhaps the umps complained because of the in-play/foul ball rule when a ball hits the girders. Did the ball hit in or out of bounds? After all, there is no chalk dust up there to help their "vision".

First let me observe that I can find no connection between this post and the subject matter of this board.
That said, I have to ask you Peter, do you agree or not agree with the contents of the article you felt compelled to quote in toto from the newspaper? I could not determine from your response whether you felt that the writer was not telling the truth, or that the information is incorrect, or that the baseball commissioner should not be allowed to make the decision, or perhaps that the decision was the wrong one and he should change it because you disagree.
It rained in Chicago and we played. Was that a "home field advantage"? Baseball like life, does not always meet everyone's criteria for "fair".
Heaven forfend that you should interpret this as criticism of your position on the matter (whatever it turns out to be).
My suggestion to the Astros(yeah, I know, no one asked me either), is to just get on with the program. Quit complaining and play the game.
And finally, before the subject comes up. I am not a Chicago fan, nor am I an Astros fan. All of them are paid way too much for playing a children's game.

If it is so that modern athletes are overpaid participants in "children's games, who is to blame? The paying public, some of who also shell out thousands over their lifetime for scanner after scanner. To me, most in this hobby are nothing more than electronic voyeurs, listening to the suffering of others. I think that's why my scanner is usually OFF. I usually only enable it when things are going on that might affect me personally, such as when I'm at an event. Of course that implies my scanner has a good selection of channels to cover where I go, but, as I say, it's normally silenced.

My actual point is that everything is relative. Our society is one of excess, and that absolutely includes our hobbies. I really don't think proponents of any hobby should criticize others. Squelch tail (meaning: got it)?

Please Scott, don't interpret my words as criticism of the way Peter choses to recreate, or by implication your choice of when or where to use your scanner. I simply was asking for some sort of clarification of his sentiments. I have seen and continue to see behaviour among my fellows that can only be classed as bizarre. I am sure many of them view me in the same light. Even if they are my relatives.
Nope, no criticism except that he failed to express himself clearly. Oh, and the implied criticism of our "society of excess" that seems to value people who play games well over those who contribute more substantially to society, LEO for example and FD....and teachers. I could go on, but see no purpose to doing so.

From: Scott Royall
Topic: 10436  Message: 10446

Indeed Peter was unclear in his statement, and your response seemed to express a negative view of that recreation. Neither had much to do with scanning, of course.

I do think that discussing the nature of our hobby is relevant. We have both seen people in the bizarre range all right, and that doesn't help how we are perceived. As I've said, my scanner is typically muted until I need it. Funny thing, though, I find that I have less and less patience for the routine chatter it spews out. I find that my tolerance for noise has really disappeared. I still want to have the CAPABILITY to hear events as they unfold around me, and I suppose that's why I'll go to digital whenever STARnet does.

How about you?

Folks, this has been handled off list, and I was unclear that my post was in ref: to all the MMP staff and the Astros Staff were talking quite a bit over the radio about this Event. Not to mention all the FRS radios that were buzzen with Astros Fans. Lets get back to our friendly posts about everything scanning in Houston.

:)

Well in one way I agree with you. After years of being aurally assaulted by radios of various varieties, I find that my tolerance for the "static" is reduced as well. I guess I could turn them off more than I do, but I feel somewhat compelled to have them on because of work. I used to have one on beside me most of the time at home but have cut that back substantially. The growing problem for folks with our hobby is that there are now so many frequencies and so many systems that it is a practical impossibility to monitor all or even most of them. Do what I do, be selective. When I am in SugarLand area I listen to HPD/HFD and the Richmond StarNet tower. When I am in downtown I listen to HPD/HFD and the downtown tower, like that.
It cuts way down on the "noise" except for them dang Metrolift buses. I have not figured a way to tell my RS2067 to ignore them.
As for going digital, I think that is far enough in the future that I can wait to make a committment until I see what the price of progress looks like it will be.

I meant nothing unfriendly at all. I bear no animosity whatsoever toward you or the Astros. Simply wanted clarification.
Also: I have been hearing TG 4720 which Myles has ident as Fulshear FD1 on the Richmond tower. Traffic is not real determinant but seems to be associated with a fire station, so that is probably correct.
Also heard what appeared to be LEO traffic on one that came up as TG 4712 which does not show on Myles list I have. TG 45648 which Myles ident as NE Ft Bend County FD was carrying definitely LEO traffic on at least two occasions last week.
I am not of course the authority on this stuff like Myles is but they might give you something to listen for.

# 10451. RE: [HoustonScan] somewhat more on topic

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-28 01:39:57 UTC
From: Scott Royall
Topic: 10436  Message: 10451

Yes, we are much alike, although I may be even more selective. When at home, I'm listening to HCSO District 4, Community VFD, and MAYBE HPD Westside. That's all. Since I live behind West Oaks Mall, you might expect me to monitor West Oaks Security. Nope. I have the frequency, but find them extremely banal to listen to for any period. However, what I really detest listening to is HPD and HFD, mainly because their deviation is jacked off the chart. I know, that's simply the old standard, but it's also damned annoying and totally unnecessary. Every repeater that I know of can be cranked back to 4 kc. That would help so-called "bleed-over" issues downtown.

# 10452. dual tones / decoding

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-28 02:27:53 UTC
From: Ben - ne5B
Topic: 10452  Message: 10452

My VFD of which I'm a member uses Motorola M???? IV. Pagers with what I've heard called the Reed tones
Is that the same as the tones mentioned in the following message?

Our chief wants to keep a record of each time we are paged out and no one single person is around all the time to do this,
so we don't have a complete list, and the dispatchers have 5 other VFDs that they work, along with the Sheriff's dept and EMS.
They don't want the added task of giving us a detailed list of our calls,

Is, there free or cheap Software that will decode these codes via the Sound card ?
Would be great if I could get software to work with my old scanner decode the tones and record our calls along with the date/time stamps as text..

What scanners decode these tones??

Thanks,
Ben - ne5B

How close are you to the Clodine tower? There seems to be an ongoing "tweaking" problem with the repeaters. Every agency in the area seems to have the minor complaint about occasional bleedover on their radios. (Borgnet, of course, denies that a problem exists, although, in the past, I have heard the techs talk about working on the microwave connection.) Perhaps that is what you have been hearing.

Are you certain about 4712? That is 8 less than 4720, Fulshear FD, or 12 higher than 4688, which is 32 less than 4720, which would be the normal step spacing on Batwings. Perhaps 4688 may be a "new" talkgroup and 4712 is a "hidden" talkgroup. Ah, the quest.

What type of traffic was heard on 45648? Was it the SO or Fire Marshall? But, I'm still suspicious about bleedover.

I am some distance from Clodine, down in W Airport/Eldridge Rd part
of Sugar Land.
As I recall, traffic on 45648 was two LEO discussing a traffic stop,
but that was several sleeps ago so my recollection of the content may
be faulty.
4712 was definitely what was displayed on the radio. I saw it a
couple of times.
All this could easily be associated with internal problems
of "Borgnet". I will listen more closely as time permits.

Metorlift dirvers/dispatchers heard on my RS2067.
I thought I'd mis-programmed my scanner. I'm please to note that someone else is hearing their unprofessional jabba'.
Is there anyway to eliminate this annoying traffic?

Metorlift dirvers/dispatchers heard on my RS2067.
I thought I'd mis-programmed my scanner. I'm please to note that someone else is hearing their unprofessional jabba'.
Is there anyway to eliminate this annoying traffic?

r e goldy <regoldy@...> wrote:
Well in one way I agree with you. After years of being aurally
assaulted by radios of various varieties, I find that my tolerance
for the "static" is reduced as well. I guess I could turn them off
more than I do, but I feel somewhat compelled to have them on because
of work. I used to have one on beside me most of the time at home but
have cut that back substantially. The growing problem for folks with
our hobby is that there are now so many frequencies and so many
systems that it is a practical impossibility to monitor all or even
most of them. Do what I do, be selective. When I am in SugarLand area
I listen to HPD/HFD and the Richmond StarNet tower. When I am in
downtown I listen to HPD/HFD and the downtown tower, like that.
It cuts way down on the "noise" except for them dang Metrolift buses.
I have not figured a way to tell my RS2067 to ignore them.
As for going digital, I think that is far enough in the future that I
can wait to make a committment until I see what the price of progress
looks like it will be.

# 10467. Re: somewhat more on subject post

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-29 17:34:53 UTC
From: bpckty1
Topic: 10436  Message: 10467

I'm no radio tech, but, after listening to the media remotes in the past, I have heard the engineers reporting that they are receiving interference from other users. Plus, for awhile, when the Richmond site was integrated into Borgnet, there was some interference with one of the HPD MDT frequencies. So, I am speculating that there might be some occasional interference from HOK that causes the system to "freak", thus needing to be tweaked. Most of the tweaking seems to involve the various area fire departments having to be realligned so they don't bleed over, but I have heard area PD/SO talkgroups where they should not be. And, I have heard this both on several of my scanners and a Batwings transceiver.

Just my 2-1/2 cents worth.

Marvin,
Assuming you're talking a PC (and not a Mac)
yes.
Take the drive you remove, and set it to be a slave (there's a jumper,
and labelling on the drive itsself should explain how to set), then slap
it into another computer, on the same cable as another drive. Bada-bing.

Oh, I'd suggest trying to re-install the operating system, before doing
that, though. Don't format the drive (you'll lose the files, then),
just re-install the operating system over the top of itsself. You'll
lose all your customizations, and the programs on the computer won't
neccisarily be runnable, but the files will still be there, and you can
recover from that point.

-Eric

>

I did that with one of the ICRI units. I was out at Astroworld working
Fright Night and heard it on Pasadena and got Fox to head out there. I was
using an XTS-5000 for Pasadena and I have now adjusted the timing a little but so
as not to get as much clipping in the beginning of the audio (it was set at .8
seconds and I extended it a little bit).

When they landed they told me the audio was a bit low for them, but so was
my radio by itself when I was talking on it in the beginning (I had it hooked
through my car radio, not a second handheld). Might need to get the car
radio looked at....

How did it sound?

Steve

# 10476. Re: [HoustonScan] Deer Park to STAR-Net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-10-30 11:00:21 UTC
From: Myles Barkman
Topic: 10431  Message: 10476

Sounds like most of Deer Park has been moved off the old system and onto the STAR-Net system.
Along with that, sometime Friday night/Saturday morning, another frequency was moved to the STAR-Net controller.
867.6125 is no longer part of the old system.
The old system, pretty much left to South Houston PD, now consists of three freqs:
867.8625 voice
868.1125 alternate control/voice overflow
868.3625 primary control

Don't need too many freqs when most of your traffic is on one talkgroup. You might still hear some Pasadena and Deer Park talkgroups come through the system, but I figure that is due to South Houston PD radios affiliating their radios on those talkgroups during scanning. Either that or there are some non-approved radios out there affiliating those talkgroups onto the system.

Word is, South Houston is finalizing their contract with Harris County so the days of the old "local" system are numbered. When SoHo PD gets moved to STAR-Net, the three remaining freqs may be switched over to the Pasadena STAR-Net site. That would give the site back the 12 original freqs that consisted of the "local" system, making it one of the larger STAR-Net sites of the system.

The only manner I have found that will eliminate them is to use
the "bank closed" (func 2)feature on that scanner. It will then only
scan for the talkgroups you have entered into the memory. This will do
the job, but will also exclude other talkgroups not programmed as well.
So you may miss some stuff.

Actually, there is another way. In open mode, your TG list can act as a "do not scan" list. It's not useful for much else in that mode, after all. Just enter and lock out the TGs you don't want.

All I had to do to listen to DP on Star net is just program the
Pasadena Star-NET site(2318-23) in and then the DP talkgroup ID's.
Here are the Pasadena freq:

2318-23 Pasadena. Located on tower at City Hall, keymap 536R (ct
83.72 Hz)-changes still occuring
866.1125, 866.3625, 866.6125, 866.8625, 867.1125, 867.3625,
868.6125c2, 868.8625c1

Then just program the DP talgroup ID's which should be the same as
the old system,ie(30096, 30800,etc...).
Make sense?
If you have any more questions just post and I will try to help.

Niko

If you are using an older scanner not capable of control-channel trunk tracking, you need to add that 867.6125 in there as well. If you have a newer scanner that can do 'control-channel-only' trunk tracking, just program in the two freqs 868.6125 and 868.8625 and don't worry about the frequency changes.
I've now updated the STAR-Net list to reflect the new change in that site.

Westlake VFD is getting ready to move their operations to the UHF freqs they have been licensed to for awhile now, possibly as soon as next week.
When they do, they will abandon STAR-Net and the low-band 33.740 MHz paging freq.

The new channels are:
453.475 [dpl 023] Ch.1 repeater Dispatch
458.0625 [dpl 023] Ch.2 simplex
453.475 [dpl 311] Ch.3 talkaround
458.075 [pl 192.8] Mutual Aid 1 (use for Lifeflight contact, coordinate with Cy-Fair)
458.0625 [pl 192.8] Mutual Aid 2

Don't remember if I've asked this before but does anyone have information on Champion VFD use of 453.800 MHz? It has had a repeater licensed since January.
In addition to the common 458.0625, 458.075 and 458.9375 freqs, they are also licensed for
458.550 MHz. I assume the 458.550 is to do training with Cy-Fair.

Subject: REACT SUGGESTS "CALL CHANNEL" ON F.R.S. RADIOS

USING F-R-S CHANNEL 1 TO SUPPORT A NETWORK OF TRAINED VOLUNTEERS FOR NEIGHBORHOOD COMMUNICATIONS DURING A DISASTER OR EMERGENCY SITUATION

REACT International, Inc.
REACT SUGGESTS "CALL CHANNEL" ON F.R.S. RADIOS
For Immediate Release

Suitland, MD., June 16, 2000 -- REACT International Inc., today announced a campaign to promote the designation of a "call channel" on the Family Radio Service (FRS) radios.

With the high popularity of Family Radio Service units throughout the country, personal two-way radio use has increased tremendously. These non-licensed short-range handheld communications devices are being carried everywhere. Although designed as a private convenience for the public, they are capable of contacting other users. Presently, however, contact in this circumstance is difficult if not impossible due to the radios operating on different tones and frequencies.

While FRS radios were designed to have the appeal of privacy by using tone (CTCSS), the very nature of this idea makes it a challenge to talk to other users. At times of need when it would be a benefit to reach others, the tone should be disabled and a single frequency used. With this commonality the radio takes on an element of safety in addition to the designed concept of private convenience.

REACT (Radio Emergency Associated Communications Teams) is suggesting adoption of channel 1 (462.5625 MHz) as the official "Call Channel", without tone. We are soliciting radio manufacturers to mention this mode of operation in owners manuals included with the radios. REACT is also looking for partners such as radio communications magazines and websites in promoting the concept. We also seek the support of agencies such as the National Park Service and other recreational areas to publicize the "Call Channel" as a common frequency to use for communicating with others when needed.

The idea was recently developed after lost hikers in Southern California were finally able to make contact after 40 minutes of calling on 14 different channels and 38 different tones. Ranger Jeff Lee, using the FRS radio belonging to 11-year old Kristofer Moore of San Clemente who had heard the call, finally talked the lost hikers down the mountain.

About REACT
REACT was founded in 1962 and is the recipient of The President's Volunteer Action Award. Headquarters for the international organization of volunteer communicators is Suitland, Maryland. Although first use involved CB radio, which still exists, most teams now also use

GMRS. There is an extensive network of GMRS repeaters throughout the country. In a typical year members may monitor CB, GMRS, Amateur, VHF and Marine frequencies over 3 million total hours. Approximately 170,000 calls will be taken and 39 million dollars will be saved by taxpayers because of this volunteer work.

BASIC ASSUMPTIONS BEHIND CREATION OF LOCAL NEIGHBORHOOD TEAMS
by Wayne Barringer - KB6UJW/KAG0370

-- SUMMARY --
This document discusses the causational factors that limit availability of local resources during an emergency and highlights the historic reliance on same limited resources by citizens/residents.

-- BACKGROUND --
The unpredictable nature of disasters and emergency situations is the cause of much concern among government officials and agencies at the federal, state and local level. The basic premise of emergency response is founded in the timely response based on equipment availability of local resources. Because of budget limitations, these resources are -- by nature -- limited.

During an emergency or disaster, governmental resources at the local level may be stretched beyond capacity, thereby limiting the number of responses to the sudden requests for assistance.

- Limited Resources -
All emergency response planning capability is based on limited resources. Most national and state/provincial governments have created an Office of Emergency Services (OES) under one name or another that is charged with the creation, planning and execution of an coordinated response in the event of an emergency or local disaster.

Although heavily relying on locally-trained volunteers, some jurisdictions have a paid staff of one, two or more assigned within the local police or fire authority. A program soliciting and training volunteers is an ongoing source of free assistance that can be called upon at any given time. While not all volunteers will be available all of the time, sufficient volunteers are recruited and trained with redundancy in mind allowing maximum coverage during a majority of situations.

All governments are mandated by the public to be fiscally responsible with allocation of resources. Emergency response plans are designed to utilize availability of resources within their immediate control. Many governments have negotiated a Memorandum of Understanding (or "MOU") with neighboring jurisdictions in the event local resources are extended beyond capacity and supplemental resources are needed.

In this situation, one jurisdiction can provide additional resources on a temporary basis until normal operations can be resumed. Essentially, this "entends" the equipment available during the time the emergency has been declared and the MOU has been acted upon.

-- HISTORY OF CERT --
Beginning in 1985, the Los Angeles City Fire Department (LAFD) publically acknowledged this "limitation of local resources" and developed a program that trained neighborhood teams to act as the "first line" of response during an emergency when local government resources were not immediately available.

The LAFD recognized residents and citizens in would very likely be on their own during the early stages of a catastrophic disaster. The LAFD realized if some basic training in disaster survival and rescue skills were offered, it would improve the ability of citizens to survive until responders or other assistance could arrive.

In 1985, the Community Emergency Response Team (CERT) concept was developed and implemented. The training program proved to be so beneficial that the Federal Emergency Management Agency (FEMA) felt the concept and program should be made available nationwide.

-- FRS AS A LOCAL COMMUNICATIONS TOOL --
The Family Radio Service ("FRS") is one of the Citizens Band Radio Services. It is intended to provide family, friends and associates with a mean of communicating among themselves within their neighborhood and while on group outings. According to the FCC, a communication range of less than one mile should be expected.

When FRS was authorized by the Federal Communications Commission (FCC), it was not immediately considered for CERT operations. However, the growing popularity, affordable price and easy-to-operate design make it a perfect tool for very local, low power operations.

FRS is not a replacement for "traditional" radio services associated under the "emergency communications" umbrella but should be considered as an supplement to them. FRS provides local governments with the potential to communicate directly with citizens/residents "in the field" who may not have the availability of wire-based telephone services.

The approval of the Family Radio Service introduced a powerful tool to CERT teams nationwide. While unreliable for long distance communications, it is well suited to the limited scope of local neighborhood communications.

Although isolated instances of long distance communications contacts using FRS have been documented and widely publicized, it is impractical as a reliable communications medium beyond the local neighborhood level. But it can, while supplementing other CERT program training, provide an incredible communications capability at the "local" level that extends the voice range of normal citizens and residents.

The growing popularity of FRS, coupled with its affordable price, easy-to use instructions and pre-programmed frequency capability render it a viable tool in local CERT neighborhood communications. Because usage is largely uncontrolled and subject to frequent interruptions, it cannot reliably be used for traditional "emergency" communications operations. The safety of CERT operations and volunteers could easily be compromised by uncontrolled communications by users. But it's place in local neighborhood settings for CERT volunteer and communications should not be overlooked.

Subject: "National SOS Radio Network"

"National SOS Radio Network" ready to start, based on millions of FRS "Family Radio Service" radios already in use plus 675,000 ham radio operators across America. "National SOS Radio Network" provides instant, reliable, emergency communications for everyone. Designed to eliminate communication breakdown as occurred in the aftermath of Hurricane Katrina. Ready to go into operation immediately across America.

HARTFORD, CT (PRWEB) Oct 6, 2005 - In the aftermath of Hurricane Katrina, it's become clear that a major contributing factor to the tragic loss of life was the near total breakdown of communication systems. Once electricity, telephone, and cell phone services failed, people were unable to let rescuers know of their dire situations -- and died as a result.

What could be a simple, instant, and virtually zero-cost solution?

"Establish a National SOS Radio Network (www.NationalSOS.com)," says Eric Knight, CEO of UP Aerospace, Inc. (www.upaerospace.com). "There are millions of 'Family Radio Service' or 'FRS' radios already in use by the public for camping, boating, and hiking, and there are 675,000 licensed ham radio operators in America -- people renown and prepared for emergency communications. The output frequencies of FRS radios are easily received by the radio gear ham radio operators use daily. That's the magic link in this emergency communication strategy."

Knight went on to say, "The best part of a National SOS Radio Network is that it wouldn't require new laws or any new legislation whatsoever. It could go into effect, today. Once the ham radio community is made aware to listen for the public's emergency broadcasts on an FRS frequency, the national network will be up and running. It's as simple as that."

Knight has been a ham radio operator (KB1EHE) for over 30 years. To help spread the word about his idea to fellow hams, he said he plans to approach the Amateur Radio Relay League ("ARRL", www.arrl.org), the national membership association for amateur radio operators. Knight said, "The ARRL is a wonderful organization. They knit the ham radio community into a network that fosters education, technology experimentation, and emergency preparedness and assistance. With a positive word from the ARRL, the National SOS Radio Network could spring to life immediately."

FRS radios don't require an operator license, can be used by anyone of any age, and are available for as little as $14 at all large retailers, such as WalMart (www.walmart.com). FRS radios can broadcast 2 to 8 miles, depending on terrain. And there are ham radio operators in nearly every community in America. (To see how many ham radio operators are in any city or town, visit www.qrz.com/i/names.html and type in a zip code.)

According to Knight's proposed National SOS Radio Network plan, ham radio operators would rapidly relay the public's emergency needs to local and state authorities -- such as police and fire departments -- as well as to national rescue and relief agencies. As a natural extension of the National SOS Radio Network, all elements of government could also incorporate FRS radios into their communications systems -- for direct, immediate links to the public's emergency situations.

"In times of public crisis, the basic recommendation is for citizens to set their FRS radios on Channel 1 and transmit their emergency needs, and for ham radio operators to tune their receivers to 462.5625 MHz, the frequency that corresponds to FRS Channel 1," said Knight. "Specific operational details will evolve as the National SOS Radio Network gains awareness. To get the ball rolling, we've posted some operational ideas on a Web site we created: www.NationalSOS.com. We look forward to the ARRL's ideas and feedback, too."

"With the simple addition of a low-cost FRS radio to an emergency preparedness kit, a family in distress could literally reach out to the world -- and get the help they need," said Knight. "I can't imagine a more powerful tool that could save so many lives."

"The National SOS Radio Network blends very well with the overall mission of UP Aerospace," Knight added. "It's all about broader public access for a variety of services. We pride ourselves on providing low-cost access to space -- particularly for the nation's college and university students. Likewise, through the National SOS Radio Network, the public can have immediate, life-saving access to emergency and rescue resources. It's truly a public service. We're not looking to profit from it. It feels great to play a role at the grassroots level of America's communities."

The next CERT training at the JCC will take place on Thursday evenings from 6-9 pm, beginning January 5 and ending February 23. I'd be happy to add you to the roster. I simply need the following information from you:

Address, Name of Subdivision, Home phone, Work phone, Cell phone

Please encourage others to contact me to register. In light of the recent natural disasters, I think the class is going to fill up very quickly!
Thank you for your continued interest!

The CERT training held at the Jewish Community Center.
Attached please find a hold harmless waiver required by the Harris County Citizen Corps.
Please bring the signed, notarized waiver to the first class.

Please don't hesitate to contact me if you have any questions or concerns!

Sincerely,

Marni Rosen

RSVP Program Coordinator

# 10504. Re-banding in the Houston Area?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-06 13:33:32 UTC
From: John Perry
Topic: 10504  Message: 10504

I recently purchased a RS Pro-2051 scanner when the price was reduced. At the time I had no idea that there was a plan in place to re-band the 800 Mhz segment. Does anybody have any idea what the schedule is for the Houston area for re-banding? Did I just purchase a $149 paperweight? I just checked my receipt and see that I've had it long enough that I can't return it.

Sometime around the fourth coming of Jesus. Seriously, there's a time-table in Washington, and then there's realty. We won't know until it happens, because other users must vacate first.

# 10515. new listings and looking for programing help as well

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-09 21:46:56 UTC
From: sandyj
Topic: 10515  Message: 10515

O.K. what is the new listings for Pasadena
and what sites would be best to program from
as I live in the Galveston area.

Also has Webster done the switch over yet to
the starnet system and if so, again as above.

I will be using Rad shack 2053 scanners for
this endeavor as I have three of them to program.

I am also looking for someone who is very good with
DOS programming as I have three mobile scanners I need
programmed will pay a reasonable fee for this service.

but you need a dos able computer for this at a very slow
rate if not I have a DOS lap top for the job all I need is some
ones expertise for this job.

thank you in advance

regards
sandyj

# 10516. phone questions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-10 01:25:32 UTC
From: Myles Barkman
Topic: 10516  Message: 10516

Got a couple of questions regarding phones.

1) We all know that phone numbers can be ported between different cell phone companies.
Has anyone heard of pager numbers being portable between carriers?

2) Does anyone have the local Houston area (281/713/832) number that gets you into the Proctor Test Set? I have a new phone that sometimes does not dial certain phone numbers and I suspect that the Telco is not reading some of the DTMF tones properly.

You can email me off-list on #2 if you wish.

Thanks

# 10517. RE: [HoustonScan] phone questions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-10 01:36:25 UTC
From: Michael W. Jones
Topic: 10516  Message: 10517

Since that's my part of the business, I can answer these.

Pager numbers are not portable at this time. Switch companies, switch numbers.

In response to #2, I don't know of an existing test set, but I could write one. The only catch is my script would not recognize * and # - Only 0 through 9, but it could still work. Let me crank one out tomorrow (I can easily justify having one in the office to test Touch Tone Detection), time permitting, and I'll private message you the test number.

Mike Jones

No, you cannot port pager numbers.

# 10519. New poll for HoustonScan

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-14 23:14:11 UTC
From: HoustonScan@yahoogroups.com
Topic: 2083  Message: 10519

Enter your vote today! A new poll has been created for the
HoustonScan group:

Should ARES Monitor FRS Ch. 1 in disasters?

o Yes!
o No!
o Maybe
o Other

To vote, please visit the following web page:
http://groups.yahoo.com/group/HoustonScan/surveys?id=2045357

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

# 10520. First Colony Mall Security

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-15 11:07:10 UTC
From: Myles Barkman
Topic: 10520  Message: 10520

Is First Colony Mall Security still using their talkgroups on the STAR-Net system?
Since the system they are on is not owned by Missouri City and is part of STAR-Net, how could they possibly afford the costs?
I hadn't logged their talkgroups on the Houston site since July/August but I hadn't been listening (logging) continuously either.
Most likely, you would hear them on the Missouri City site which is kind of a stretch for me.

You could relay a emergency message but if instead turned out to be a
health and wellfare message you would be risking your Ham licence.

Where FRS CH 1 is also a GMRS Freq. It would seem
to me that this would conflict with FCC rules.

GMRS FCC rules.

I had a hard time getting to work this morning as our buiding is next door to the fire. Plenty far not to in danger of the fire but within the baricaded area. They were worried about a concreate silo that could explode that was between us and the fire.

Every thing has about died down now on the fire. The building that burned was no longer being used. It was interesting to listen to 154.280 Fire mutual aid. I could here a number of users chirping in like they were being patched from somewhere else. Fire departments responding were Waller FD, Monaville, Praire View and a CY-Fair Ladder truck plus a Cy-Fair supperviser.

That Cy-Fair ladder truck with the remote snorkle was doing the job of several trucks compared to the ground attack. Cy-Fair had some issues with quick adapters on 4 in lines. Waller and Cy-Fair quick adapters were not compatable. They had to use 1.5 in lines untill they figured it out. Even with the 1.5 in lines that truck was doing a great job!

firefighters hospitalized after ambulance wreck

01:37 PM CST on Wednesday, November 23, 2005
From 11 News Staff Reports

Click to watch video from accident scene

Four firefighters and one civilian were transported to Hermann Memorial Hospital after an ambulance collided with another vehicle in southwest Houston around 12:30 p.m. Wednesday.

KHOU-TV

Four firefighters and one civilian were transported to the hospital.

The ambulance was on the shoulder of the road and may have overturned. Two other civilians were treated at the scene, according to Houston Fire Department's Jack Williams. He said none of the injuries were considered life-threatening.

There was no immediate cause of the accident, which took place near Almeda School Road and Broadhurst, but Houston police are conducting and investigation.

8 Injured In Ambulance Accident
4 Firefighters Transported To Hospital

POSTED: 1:25 pm CST November 23, 2005

HOUSTON -- A Houston Fire Department ambulance was involved in a major accident with another vehicle Wednesday afternoon, sending eight people to the hospital, KPRC Local 2 reported.

Officials said ambulance No. 48 hit another vehicle on Broadhurst at Almeda School Road shortly after 12:30 p.m. Both the ambulance and car landed in a ditch.

Four firefighters were transported to a local hospital in guarded condition. Their injuries are described as non-life-threatening.

Four civilians were also transported, including one with life-threatening injuries.

The cause of the accident is not yet known.

Stay tuned to KPRC Local 2 and Click2Houston.com for more on this story.

Video: Residents Blame Obstructed Stop Sign For Accidents

8 Injured In Ambulance Accident
Ambulance Passenger Dies After Wreck

POSTED: 1:25 pm CST November 23, 2005
UPDATED: 4:54 pm CST November 23, 2005

HOUSTON -- A Houston Fire Department ambulance was involved in a major accident with another vehicle Wednesday afternoon, sending eight people to the hospital, KPRC Local 2 reported.

Officials said ambulance No. 48 was hit by another vehicle on Broadhurst at Almeda School Road in southwest Houston shortly after 12:30 p.m. Both the ambulance and other car, a Honda, landed in ditches on opposite sides of the road.

"They saw three teenage boys in the car. (They) had the music so loud that it just wrecked. They didn't hear the ambulance coming," witness Stephanie Alvarado said.

The ambulance flipped twice before it landed right-side up in the ditch.

"The man that was driving climbed out the window. It knocked his shoe off. He had a shoe in his hand," witness Anthony Yates said.

"They took out the patient in the ambulance and started doing CPR on him," Alvarado said.

Four firefighters were transported to a local hospital in guarded condition. Their injuries were described as non-life-threatening.

Three teenage boys in the Honda were also taken to the hospital.

The 80-year-old patient who was being transported in the ambulance died a short time later. It's not known if the accident contributed to his death because he was in critical condition at the time of the wreck.

The 19-year-old driver of the Honda does not have a license or insurance, investigators said. Witness said the driver never stopped.

"It should have seen the lights and heard the siren. The windows were down, so there's no reason why they shouldn't have heard them," an officer said.

The teenage driver was ticketed for no license, no insurance, and failure to yield the right-of-way for an emergency vehicle.

Residents in the area said one of the stop signs at the intersection is blocked by trees, and drivers frequently run it.

"The limbs are covering it up, so nobody see it. There's been a lot of accidents happen in this corner," a neighbor said.

Within an hour, another accident occurred at the same intersection.

"My son was driving. And when he pulled in, he's like, 'Mom, this guy ran a stop sign,' I'm like, 'I know, it's OK,'" Lisa Stevens said. "They run these stop signs over here all the time."

The driver in the other vehicle was ticketed for running a stop sign.

The tree is on private property, so it's up to the owner to trim it.

What does any of this have to do with the kid failing to yield to an emergency vehicle???

The article states he had his window down, maybe it has something to do with the noise level inside the car from the radio. Or then again, maybe he just didn't care.

> Video: Residents Blame Obstructed Stop Sign For Accidents

Residents in the area said one of the stop signs at the intersection is blocked by trees, and drivers frequently run it.

"The limbs are covering it up, so nobody see it. There's been a lot of accidents happen in this corner," a neighbor said.

Simple..
If he couldn't hear the emergency vehicle, then had he seen the stop
sign, he probably would have stopped and therefor the accident may have
been prevented.

Why, because he couldn't hear the emergency vehicle, or because he couldn't see the stop sign? If the stop sign was obscures by brush or trees, there's nothing he can do. If he couldn't hear the emergency vehicle, yeah, okay, maybe the music was up too loud. I have to admit, though, I've not hear some emergency vehicles until they were right on top of me when the radio was at a normal volume, with my windows down.

*shrug* Sometimes, you just don't hear 'em.

# 10538. Pasadena Star-net listening problems

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-25 07:15:05 UTC
From: niko627is
Topic: 10538  Message: 10538

I have an old pro 90 for Radio shack and just recently I started having problems with the scanner not getting all of the conversation on the Pasadena Star-Net. I have reprogrammed it several times with the freq's listed on Myles' page for Starnet. This scanner does not have a control channel so that may be part of the problem, even though it seems that this has just started in the past couple of weeks. for example, when Fire dispatch does the tone test over conventional and on trunked 7120, I only hear part of the transmissions over trunked and all of it on conventional. Have any new freq's been added that I need to program to get all of the conversations?? Any ideas??

Also, does anybody else have problems with the scanner getting real staticy around Spencer Hwy and Space Center, that seems to be only area that i dont seem to get good reception. I have a new attenna from RS but nothing made for the car. Any ideas??

Niko

# 10540. Re: [HoustonScan] STAR-Net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-25 15:20:35 UTC
From: Myles Barkman
Topic: 10539  Message: 10540

I wasn't in town Saturday when you posted that so I can't help with that.
You might give more details as to what you mean though.
I had heard on a couple of occasions last week that there had been some kind
of problems with the system where users could not get into it.
I don't know if this was for specific sites or if it was systemwide.
I was hearing the Houston site just fine when this was supposedly happening
so I can't say what the problem was.

Subject: Re: [HoustonScan] Re: Update: 8 Injured In Ambulance Accident, Ambulance Passenger Dies After Wreck! (KPRC)

Why, because he couldn't hear the emergency vehicle, or because he couldn't see the stop sign? If the stop sign was obscures by brush or trees, there's nothing he can do. If he couldn't hear the emergency vehicle, yeah, okay, maybe the music was up too loud. I have to admit, though, I've not hear some emergency vehicles until they were right on top of me when the radio was at a normal volume, with my windows down.

*shrug* Sometimes, you just don't hear 'em.

HCSO had the same problems. The sites were not "interfaceing" with each other. I guess the Downtown microwave link was down or something.

*shrug*
True enough.
There really are no reasons, in a case like this.

# 10545. Re: Update: 8 Injured In Ambulance Accident, Ambulance Passenger Dies After Wrec

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-26 02:26:04 UTC
From: Steve Nelson
Topic: 10531  Message: 10545

If ambulances were equipped with air horns like the pumpers, that would help. Is it that much expensive to install? I to have not heard ambulances in some instances until they're right on you.

# 10546. Re: [HoustonScan] Re: Update: 8 Injured In Ambulance Accident, Ambulance Passenger Dies After Wrec

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-26 04:29:19 UTC
From: Eric
Topic: 10531  Message: 10546

Exactly. I hear the pumpers easily, because of the air horns.

I can guarentee ambulances need them. People MOVE when they hear an air horn. I've seen ambulances that are stuck at major intersections because the idiots in front of it won't move to let it pass.

Err, people, don't forget that you're ALLOWED to run a red light if you are getting out of the way for an emergency vehicle, and there is no flow of opposing traffic. (Or so an officer has explained to me.)

# 10547. Re: [HoustonScan] Re: Update: 8 Injured In Ambulance Accident, Ambulance Passenger Dies After Wrec

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-26 16:18:48 UTC
From: Marvin Suggs
Topic: 10531  Message: 10547

I think Cypress Creek EMS had airhorns on their ambulances, don't know if they still do. They had an air compressor in a side compartment to power it.

Marvin

# 10548. Re: Pasadena Star-net listening problems

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-27 07:49:06 UTC
From: niko627is
Topic: 10538  Message: 10548

Does anyone know if any new frequencies have been to added to the
Pasadena Star Net site that have not yet been listed on Freq Zone???
I am missing out on part of the conversations. Please Help

Niko

# 10549. Re: [HoustonScan] Re: Pasadena Star-net listening problems

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-27 17:35:44 UTC
From: Myles Barkman
Topic: 10538  Message: 10549

All the freqs from the old "Local" system are now part of the STAR-Net system.
All users (Pasadena, Deer Park, South Houston) are using the STAR-Net system.
The old system 3536 is gone.
The freqs for STAR-Net site 2318-23 in Pasadena are:
866.1125
866.3625
866.6125
866.8625
867.1125
867.3625
867.6125
867.8625? (haven't seen this one used yet)-could be for overflow
868.1125
868.3625
868.6125 alternate control channel
868.8625 primary control channel

Again, if you have a scanner capable of 'control-channel-only' trunking, that is the way to go.
You won't have to worry if other voice channels are added or deleted to the site and it frees up your scanner channels for programming other useful things.
If you have a scanner that can use control-channel-only trunking, you would only need to program in 868.6125 and 868.8625 MHz. This is true for all the other STAR-Net sites or any 800/900 MHz Motorola trunking system (that is, until the rebanding in a few years).

Folks with the BC-235xlt and Pro-90, and other first generation trunk-tracking scanners do not have the control-channel-only trunk tracking option so all freqs for any particular site will have to be programmed.

Ok that fixed my problems, I was missing three of the frequencies.

Thanks,
Niko

Disturbing data on city's cop shortage

12:15 PM CST on Tuesday, November 29, 2005
From 11 News Staff Reports

Click to watch Reggie Aqui's 11 News Report

Houston's largest police union has charged that the city is essentially sitting on emergency call slips and failing to dispatch officers for as much as 12-and-a-half hours.

TUESDAY: Watch Doug Miller's report on 11 News at 6
Hans Marticiuc, President of the Houston Police Officers' Union, analyzed data from a sampling of police districts and charged that some citizens telephoning in emergency calls for, even the most violent of crimes, had to wait hours before an officer was even dispatched to help.

"And these calls ranged from burglaries, burglaries of motor vehicles, shootings, robberies, robberies with weapons, sexual assaults, assaults, disturbances," Marticiuc said.

The police union president had harsh words for Chief Harold Hurtt, whom he implies is incapable of leading the city's police force.

"If this is the best police chief in the country, then I think the country may be in trouble," Marticiuc said.

According to Marticiuc, during a heated discussion with the police chief, there was some mention that Chief Hurtt might lose his job over the data.

Also online
Listen to Doug Miller's audio report
Marticiuc forwarded his data to Houston City Council members who are expected to raise questions at Tuesday afternoon's City Council meeting.

Marticiuc said the city should immediately increase police presence by instituting and overtime program similar to the plan introduced in the 1990s by former Mayor Bob Lanier.

Is HPD manpower shortage contributing to crime?

06:25 AM CST on Tuesday, November 29, 2005
By Jeff McShan / 11 News

Click to watch video

Houston just set a record for holiday weekend murders and many want to know why.

Both the police chief and the mayor said they did not think hurricane evacuees factored into the crime numbers

When you call HPD, your calls go to Houston's Emergency Center (HEC).

KHOU-TV

Mike Cummings, former HPD officer, has some figures for concern.

But before they're dispatched to an actual officer who's working the streets there has to be one available. More often than you may realize, locating someone may take several hours.

This is true especially if you live on the city's west or southwest side.

"Anybody who either lives, shops or works west of the Galleria should really be concerned about this because this side of town is significantly undermanned," said Mike Cummings, Public Safety Director for the Westchase Business District. He is also a former HPD officer.

Now he hires off-duty HPD officers to patrol the 80 businesses in his business district, just to keep them safe.

Cummings spent hours going through public records and putting together a detailed report that shows the lack of police presence citywide.

"I looked at everything throughout the city and basically was able to determine, using several models, that the west side of town is significantly undermanned," Cummings said.

Cummings said to properly patrol the Westside District the department would need 506 officers. Right now they have just 403.

He also looked at numbers when it comes to violent crime.

"Based on the different studies that I did, just using the Westside Patrol area, it is anywhere from 70 to 113 officers down," he said.

His report also shows that the Fondren and Southeast substations are severely short staffed.

A few months ago HPD Union president Hans Marticiuc told 11 News the staffing issue hinders officers' ability to fight crime.

"We're getting calls all the time. We've got officers working in districts by themselves. Sometimes roll calls are just two or three people for the entire roll call," he said.

Monday Marticiuc sent a letter to Houston City Council expressing his concerns. Tuesday, he will meet with City Council Tuesday.

Mayor Bill White said it's a concern that's being addressed.

"The highest priority of this administration is getting new police officers in there. That's why we have four academy classes this year. There were years this decade where there were no academy classes," said Mayor White.

But Marticiuc said if the administration relies solely on the academy, it would take years to get to where the department safely needs to be.

November 29, 2005
Audio Report: Union chief offers disturbing evidence of cop shortage
Police union leader Hans Marticiuc said his investigation shows Houstonians have waited as long as 12.5 hours for police to respond to a crime report. He blames a serious manpower shortage.

Marticiuc also had harsh words for Police Chief Harold Hurtt, who he believes is partly to blame for the shortage. Marticiuc will present his findings to city council Tuesday afternoon.

City looks for answers to increased in murders

06:02 PM CST on Monday, November 28, 2005
By Amy Tortolani / 11 News

Click to watch video

Houston police said they had 14 homicides to work over the holiday weekend. But is this a true indicator of the city's crime situation?

According to investigators, it was a record number of murders for the city.

So far there have been 285 murder victims in Houston this year. That number is 11 greater than the 274 victims in 2004, and there is still one month left in 2005.

Houston police have no explanation for the increase in murders.

The city saw what it calls an increase in violent crime in south and southwest Houston and set up a task force in order to deal with the problems.

While no one will say that task force failed, the mayor and the police chief said there is still plenty of work to be done.

"The violent crime rate has come down the last couple of years compared to the prior two years. The number of crimes has come down. But this murder rate concerns me," said Mayor Bill White. "This is why the HPD, last summer, noticed these trends and created a new task force in that area of town where we're seeing so much concentration of these murders."

"Not only are we going to be doing it from a police department standpoint, I've also been talking to community groups about them becoming more active in crime prevention, protecting their own property as well as looking out for their neighbors," said Houston Police Chief Harold Hurtt.

Both the mayor and the police chief said they do not believe the increase in homicides is related to the increase in population due to the Katrina and Rita evacuees, but they are looking for answers.

That's pretty decent reporting. I've often heard HPD attempting to
dispatch calls that are several hours old; although most are
disturbances, or domestic assaults where the party is no longer present,
I have heard some more major crimes that have gone to the three and four
hour mark.

It's pretty scary, and I'm starting to be glad I live in Ft. Bend.

Cop shortage 'unacceptable'

06:47 PM CST on Tuesday, November 29, 2005
From 11 News Staff Reports

Click to watch Reggie Aqui's 11 News Report

Hans Marticiuc - press conference Part I | Part II | Part III

Houston's largest police union has charged that the city is essentially sitting on emergency call slips and failing to dispatch officers for as much as 12-and-a-half hours.

TUESDAY: Watch Doug Miller's report on 11 News at 6
Hans Marticiuc, President of the Houston Police Officers' Union, analyzed data from a sampling of police districts and charged that some citizens telephoning in emergency calls for, even the most violent of crimes, had to wait hours before an officer was even dispatched to help.

"And these calls ranged from burglaries, burglaries of motor vehicles, shootings, robberies, robberies with weapons, sexual assaults, assaults, disturbances," Marticiuc said.

The police union president had harsh words for Chief Harold Hurtt, whom he implies is incapable of leading the city's police force.

"If this is the best police chief in the country, then I think the country may be in trouble," Marticiuc said.

According to Marticiuc, during a heated discussion with the police chief, there was some mention that Chief Hurtt might lose his job over the data.

Also online
Listen to Doug Miller's audio report
Marticiuc forwarded his data to Houston City Council members who are expected to raise questions at Tuesday afternoon's City Council meeting.

"We've got a problem here at HPD and that is that I'm not sure we're able to provide basic police services," said Marticiuc.

The Union said it discovered more than 500 cases last month in which the city delayed dispatching a police car from 90 minutes to 12-and-half hours.

"It is ridiculous. That should never have been the case. There should have been a front line supervisor driving his manpower to respond to those calls. That is ridiculous and totally uncalled for. It's appalling to the citizens of Houston," said City Councilman Adrian Garcia.

Mayor Bill White didn't like what he heard at City Council. "I think it's unacceptable to have such a long gap between the time of call intake and dispatch and we're going to do something about that," White said.

Police and city officials said much of the problem is that the Police Academy can't graduate enough cadets to replace police officers who have retired.

Former Mayor Lanier eased a crime crisis shortly after his first election by pouring money into police overtime. Some say Houston should try that again.

"We have to set aside some money for overtime. The number one concern for the city of Houston is public safety, and if we can't do that, then we're failing as a council.

Right now, Houston's police force is struggling to do more with less officers.

Marticiuc said the city should immediately increase police presence by instituting and overtime program similar to the plan introduced in the 1990s by former Mayor Bob Lanier.

One thing to bring this into context is that the data used cover only three police districts, a fraction of the city for just one month.

This is also amidst growing conflict between the police union and Houston Police Chief Harold Hurtt.

Paying the price for apartment security

07:13 PM CST on Tuesday, November 29, 2005
By Janice Williamson / 11 News

Click to watch video

Houston's holiday crime wave of 14 homicides has many people concerned and there are new ideas about increasing public safety.

One idea would force apartments to hire security officers.

Apartment owners said they were surprised that HPD Chief Harold Hurtt had spoken out without first speaking with them about the issue.

They said the increase in crime is everyone's problem.

KHOU-TV

Larry Hill owns four apartment complexes.

Police found 25 shell casings and two bodies four days ago at the La Cantera apartments.

The double murder is part of a terrifying trend.

In the past three months, half the homicides in Houston took place in apartment complexes.

That has Chief Hurtt calling for change. "You know, you get in and you talk to the residents, you talk to management and you encourage people to get to know their neighbors to get to know who belongs in the area," he said.

Chief Hurtt also wants to force apartments that have too many calls, to hire their own security.

Shutting down crime is a top priority, according to the Houston Apartment Association.

Larry Hill owns four apartment properties in Houston. "They only work in pairs and they're $20 an hour if they carry a weapon, so you can do the numbers. From dusk to dawn, that's a pretty substantial number. It just ends up falling back on the residents normally, because we can't carry it all," he said.

Hill said many complexes already pay for security patrols. Some even have security cameras.

Owners say the police cutbacks took a toll on the southwest part of town.

"The Gang Task Force was cancelled some time ago. There was a lot of gang activity in that area. The loss of a lot of police officers certainly hurt," Hill said.

The Apartment Association is willing to do its part, but police backup is a necessity.

Chief Hurtt is to meet with Mayor Bill White Wednesday

An ordinance requiring apartments to have extra security could be on the City Council agenda within the next couple of weeks.

Two crimes, each a 4-hour wait for cops

10:14 PM CST on Tuesday, November 29, 2005
By Jeff McShan / 11 News

Two crime victims in Houston can attest to the fact that it can take a very long time for HPD to respond to a call.

It was nearly 4:30 p.m. and Taba Alcorta and her mother were still waiting for police.

"We came here about 12:30 for lunch and came out here about 1:30 and saw the car," said Alcorta.

Her car had been broken into and her laptop was gone.

Her insurance requires an HPD incident number, so they waited.

KHOU-TV

Taba Alcorta and Josefina Portl waited nearly four hours for police to arrive.

"I think something needs to be done and if that's what it takes for them to have more policemen, yeah. Not only do we get broken down in our car during the lunchtime, but we have to wait until it gets dark to get a report. And I don't know if I can do it by the phone or not, but they don't tell you that on the phone when you call," said crime victim Josefina Portl.

Portl was frustrated because she called four times.

"They said it's not a priority and unless you have a gun to your head, it's not a priority," said Portl.

They weren't alone. On Hillcroft, a man who works for an ATM company stopped for a quick break. Someone broke his window and took off with $18,000.

That was just after 1 p.m. and at 5:30 p.m. HPD finally arrived.

"We've got a problem here at HPD. And that is, I'm not sure we're able to provide basic police services," said Houston Police Union president Hans Marticiuc.

Marticiuc said he'd seen enough and took his concerns to City Hall.

He showed them stats from the month of October that showed how citizens waited anywhere from an hour-and-a-half to 12-and-a-half hours for not only burglaries, but also robberies, shootings and even sexual assaults.

"It's ridiculous. That should never have been the case. There should have been a front line supervisor driving his manpower to respond to those calls. That is ridiculous and uncalled for. It is appalling to the citizens of Houston," said City Councilman Adrian Garcia.

Shortly after 10 p.m. Tuesday, the women called 11 News and said that HPD had just called them to see if they were still at the location and needed help.

They were not at the location because after nearly 8.5 hours, they had given up and gone home from Uptown Park.

It's ok. At least Houston will have you towed off the freeway within
20 minutes if your car breaks down.

(Of course that isn't working either.)

Video: Police Union Calls For Change At HPD

Police Union: HPD Shortage Puts Houstonians In Danger
14 People Killed Across City Over Thanksgiving Holiday

POSTED: 7:47 am CST November 29, 2005
UPDATED: 4:39 pm CST November 29, 2005

HOUSTON -- A Houston Police Department staffing shortage is causing the city to take too long to respond to emergency calls, forcing some crime victims to wait hours for help, a police union official told KPRC Local 2 Tuesday.

After one of the bloodiest holiday weekends in the city's history, HPD's police union said the department's 4,700 officers are spread too thin.

"How many of those murders, before they ended up being a murder, was called in as a disturbance that we didn't show up at?" said Hans Marticiuc, with the Houston Police Officer's Union.

Marticiuc said the department is incapable of providing basic police services.

To back up the claim, the union analyzed police calls for the month of October in three high-crime districts. The analysis found that in over 500 calls for service, victims waited up to 12 hours and 39 minutes before dispatchers sent a patrol car. It took 8 hours and 29 minutes for an officer to be dispatched to a robbery, and a sex assault victim waited 5 hours and 23 minutes for an investigator to arrive.

The union puts the blame on HPD Chief Harold Hurtt.

"That is simply unacceptable," Marticiuc said.

Hurtt has not yet responded.

But the union took its complaints to Houston City Hall and to Mayor Bill White.

"This issue of people holding calls from intake and dispatch -- that's an issue that I think is a serious issue that I haven't quite got the right answer yet about what is going on there," White said.

The mayor also had some proposals to beef up the police ranks. He wants to begin the next police cadet class six months early to put more officers on the street sooner. He is also considering asking apartment building owners to help pay the cost of extra officers because about half of the city's violent crime is occurring at apartment complexes.

Southwest Houston was the scene of multiple murders over Thanksgiving weekend, where more homicides happened in the area near Highway 59, the Southwest Freeway, and Beltway 8 than any other part of town.

Across the city, 14 people were killed from Thanksgiving through Sunday. Most of the homicides happened on the west and southwest sides of the city, where police said violent crimes have been on the rise.

Residents of those areas said it is linked to growing gang activity.

"But they still come over here. And when people don't participate, and do what they want to do, they come and they hurt them," Houstonian Dorothy McGee Rogers told KPRC Local 2.

Hurtt said the department has been working to curb the rise in crime since June.

At this same time last year, 274 people had been murdered in the city. From January to October of this year, 286 people have been killed.

Well, you have to have an air compressor and an air tank. They would have to find somewhere to put it. Not very much room on an ambulance to put a compressor and tank.

That is not necessarily true. AEV Coach builder's put 15" Buell Air Horns on ambulances all the time for agencies on the East Coast. Same chassis' as what HFD runs, Type I Ford F-350's. It doesn't take a large tank and compressor to run them.

# 10559. Brazoria and Fort Bend Co FDs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-11-30 22:46:04 UTC
From: Myles Barkman
Topic: 10559  Message: 10559

Trying to get a handle on Brazoria County and Fort Bend County fire department comms.
Here is a list I put together with just Brazoria County agencies.
Can someone fill in some blanks or correct some entries?

Alvin (STAR-Net talkgroup 12624)

Angleton 46.380 (STAR-Net talkgroup 25296)

Brazoria 460.600

Brazoria County 46.140

Brookside Village

Clute 155.415

Columbia Lakes (served by West Columbia?) 453.775

County Rd 143 VFD (S of Pearland/NW of Alvin) 453.175

Damon 46.160,460.6125 (west Brazoria Co)

Danbury 154.250

Demi-John Island 153.965 (NE of Clute)

Freeport 154.325, 155.955

Holiday Lakes 453.1625

Iowa Colony 460.6375

Jones Creek 453.075

Liverpool 155.925

Manvel 453.125 or 453.625

Old Ocean 453.250 or 453.300 or 453.325 or 453.525 or 453.125

Oyster Creek 46.260

Pearland 453.850 (Star-Net talkgroup 13680)

Richwood 46.160

Rivers End 453.600

Rosharon 46.120

San Bernardo 453.575

Surfside Beach (served by Freeport?)

Sweeny 154.220 or 158.805

West Columbia 453.775 or 453.325

Wild Peach 453.350

Wolfe Air Park ?

Most of Fort Bend County I believe uses the STAR-Net system.

Can someone verify any VHF or UHF usage?

Alvin is licensed for 46.08 and 46.140 MHz.
Do all the county units equip their trucks with the low band 46.140 MHz
regardless if they primarily use hi-band, UHF or 800 for their own
dispatching?

An item like this can be expensive. A couple of them might not cost too much, but it is an incredible amount when you consider the size of Houston's fleet. Don't get me wrong, I am all about safety, that is just one of those items that generally gets cut when you have a large fleet and have to make cuts in the bid specs. But you are right, that can be placed on an ambulance. I think that Cypress Creek EMS still buys them.

The Chronicle article stated that the driver did not have a driver's license.

Inexperience, inattention, and lack of knowledge of traffic laws on the part of the car's driver, compounded by the ambulance on an emergency run, seem to have combined to cause the tragedy.

...
"Investigators must determine who was at fault: the ambulance driver who proceeded through a stop sign during an emergency transport or the 18-year-old unlicensed driver of the car.

"'Investigators will have to take a lot of different things into consideration,' Houston Police Department spokeswoman Sgt. Michelle Sandoval said. 'There's so many factors that play into it.'"

No doubt that they would be a cost prohobitive item on fleet that size.

The nice thing about all of HFD's fleet whether it be RA's, Pumpers, Aerials, and the like, that from all outside appearances that they have a newer & better maintained fleet. Say compared to San Antonio's.

Mayor Makes Proposals To Beef Up HPD
FBI Report Shows Houston No. 1 In Response Calls

POSTED: 5:27 pm CST November 30, 2005
UPDATED: 5:45 pm CST November 30, 2005

HOUSTON -- The Houston mayor's office fought back Wednesday against charges that a staffing shortage at the Houston Police Department has resulted in crime victims waiting hours for help.

The Houston Police Officer's Union said Tuesday that for lower-priority calls in October, some crime victims waited up to 12 hours and 39 minutes for an officer to arrive.

The mayor's office and the union agree that response times are good for Priority 1 calls, which are the highest-level calls for violent crimes in progress.

But they disagree over the response times for the lower-priority calls.

City leaders said they are also concerned over reports of slow police response times.

But Mayor Bill White referred to a report compiled by the FBI that ranked HPD as No. 1 with a response time of less than five minutes for Priority 1 calls.

"I think there's no crisis citywide, although there's some real problems in certain neighborhoods that we're having in crime," White said.

The mayor proposed several changes that could put more Houston police on the street, including moving up cadet classes, and reassigning officers who work in low-crime areas to high-crime neighborhoods.

The mayor also proposed recruiting retired officers to help fill in the gaps. But that idea was shot down by the union.

"If it's merely a support position, then that doesn't give me too much heartburn. But I'm going to have to see details," said Hans Marticiuc, with the police union.

Marticiuc said the city should focus on hiring new officers instead of recruiting retirees.

"At some point, the city is going to have to face the fact that in order to provide the necessary public safety that I think everyone wants and needs, it's going to cost a little bit of money," he said.

The police union's contract is also an issue. If the city tries to recruit retired officers, the union would have to agree to change its current contract, which currently prohibits that.

At this same time last year, 274 people had been murdered in the city. From January to October of this year, 286 people have been killed.

Worm quickly left its mark
Fake e-mail from FBI or CIA knocks security for a loop
By ARSHAD MOHAMMED and BRIAN KREBS
Washington Post

WASHINGTON - It's being called the worst computer worm of the year - a quickly spreading Internet threat that looks like an official e-mail from the CIA or FBI but can leave your computer wide open to intruders.

The bogus e-mail claims the government has discovered you visiting "illegal" Web sites and asks you to open an attachment to answer some official questions. If you do, your computer gets infected with malware that can disable security and firewall programs and blast out similar e-mails to contacts in your address book.

It can also keep you from getting to computer security Web sites that might help fix the problem, and it may open your Windows computer to intruders who can steal your personal data.

The worm - named "Sober X" - has spread so far so fast that the CIA and the FBI put prominent warnings on their Web sites making clear that they did not send out the e-mail and urging people to not open the attachment.

Across the Atlantic Ocean, Austria's equivalent to the FBI is investigating a flurry of similar bogus e-mails sent in its name to people in Austria, Germany and Switzerland, the Associated Press reported.

"This particular virus is a mass-mailer worm and is the largest one we have seen this year," said Alfred Huger, senior director of engineering at Symantec Corp., which sells Norton AntiVirus software. "It's as bad as it gets. With this particular type of virus on your system, there is a high probability that your personal information will be stolen."

Craig Schmugar, a virus-research manager at McAfee's AVERT Labs, said his company, which also makes anti-virus software, had logged more than 73,000 consumer computers reporting detection since the worm was discovered Monday.

British e-mail security company MessageLabs Ltd. said it has intercepted more than 2.7 million copies of Sober and its variants.

Still, the Sober worm was listed as only a "medium-risk" worm by security companies, which noted that it was not as widespread as others in recent years, notably MyDoom, which hit computers systems early last year.

Sober is known to only affect computers running the Windows operating system. It appears that Apple and Linux computer users were not affected.

The e-mail informs the recipient that the user's IP address has accessed more than 30 illegal Web sites and that the attachment contains a list of questions that need to be answered. The e-mail also includes an authentic phone number for the FBI or CIA.

And that's kept government switchboard operators busy.

FBI operators have been routing calls and complaints to its Internet Crime Complaint Center in West Virginia, which received more than 4,000 complaints about the worm on Monday. The center typically receives 18,000 complaints each month, FBI spokeswoman Cathy Milhoan said.

The FBI is investigating the source of the attack, which closely resembles an e-mail worm that surfaced in February, Milhoan said, although she declined to comment on the progress of that investigation.

Darwin is alive and well today.
Number 1, if people are stupid enough to think that the federal government is going to contact you through email about any illegal activity you may or may not be involved in, you deserve to be duped.
Number 2, if you feel guilty that you visited "illegal websites" (whatever that means), perhaps you deserve what you get also.

Stupid is as stupid does.

Across the Atlantic Ocean, Austria's equivalent to the FBI is investigating a flurry of similar bogus e-mails sent in its name to people in Austria, Germany and Switzerland, the Associated Press reported.

"This particular virus is a mass-mailer worm and is the largest one we have seen this year," said Alfred Huger, senior director of engineering at Symantec Corp., which sells Norton AntiVirus software. "It's as bad as it gets. With this particular type of virus on your system, there is a high probability that your personal information will be stolen."

Craig Schmugar, a virus-research manager at McAfee's AVERT Labs, said his company, which also makes anti-virus software, had logged more than 73,000 consumer computers reporting detection since the worm was discovered Monday.

British e-mail security company MessageLabs Ltd. said it has intercepted more than 2.7 million copies of Sober and its variants.

Still, the Sober worm was listed as only a "medium-risk" worm by security companies, which noted that it was not as widespread as others in recent years, notably MyDoom, which hit computers systems early last year.

Sober is known to only affect computers running the Windows operating system. It appears that Apple and Linux computer users were not affected.

The e-mail informs the recipient that the user's IP address has accessed more than 30 illegal Web sites and that the attachment contains a list of questions that need to be answered. The e-mail also includes an authentic phone number for the FBI or CIA.

And that's kept government switchboard operators busy.

FBI operators have been routing calls and complaints to its Internet Crime Complaint Center in West Virginia, which received more than 4,000 complaints about the worm on Monday. The center typically receives 18,000 complaints each month, FBI spokeswoman Cathy Milhoan said.

The FBI is investigating the source of the attack, which closely resembles an e-mail worm that surfaced in February, Milhoan said, although she declined to comment on the progress of that investigation.

I thought it was interesting that they said that CLEMC was on the system. I see in the programming line-up that they have a talkgroup so maybe they have one to coordinate with other agencies.
For talking to PHI and Lifeflight, I guess they are talking about ITAC-2 or MA-2, although it does not show those in the line-up.
I guess Southeast VFD will get a talkgroup too. They are still using VHF as does CLEMC.

League City is still using their own system but should have a set of talkgroups reserved on STAR-Net.

Interesting that they list Bay Area MA1-MA4 talkgroups.

Looks like more talkgroups to identify. At least we know WHAT to look for.

Shortage solutions: Chief Hurtt pitches ideas

04:32 PM CST on Friday, December 2, 2005
By Jeff McShan / 11 News

Houston Police Chief Harold Hurtt admitted Friday that the department is short-staffed, but said he and his command staff have been working on both immediate and long-term solutions for months.

KHOU-TV

HPD Chief Harold Hurtt

Speaking downtown, Chief Hurtt said the department will try to improve serving the public by trying several new initiatives over the next 90 days.

Chief Hurtt said the department has found $4 million in its insurance benefits that were not needed and will us that for overtime to staff police officers at shopping centers during the holiday season. And the department will add officers to enforce the traffic laws.

The department is planning to hire HPD cadets before they are qualified officers to help run the jail, which would allow 150 officers to return to the streets.

A large portion of Houston's population lives in apartment complexes, so Chief Hurtt said officers will be assigned to certain apartments, working with property owners to clean up and deter criminal activity.

Over the long haul, the department wants to update its computer system which would allow officers to receive vital information like suspect pictures in the field.

HPD also is talking with the FBI about forming a regional gang task force to help battle gang activity, which is on the rise in Houston.

Click2Houston.com
HPD Chief Outlines Plans For More Officers
Victims May Be Able To Report Crimes Online

POSTED: 5:30 pm CST December 2, 2005

Related To Story

HPD Chief Harold Hurtt

HOUSTON -- Houston's police chief spoke out Friday about recent concerns raised over a staffing shortage in the Houston Police Department, KPRC Local 2 reported.

Chief Harold Hurtt agreed with his critics in the police union that the department needs more manpower. But he said plans have been in the works for months to increase the number of officers through streamlining and overtime.

Hurtt said police response time in Houston is among the best in the nation for major, violent crimes -- an average of 4.8 minutes. But, to achieve that, the department often diverts officers from low-priority calls.

"As a result of that, we have seen somewhat of an increase in responding to the lesser important calls where life and property is not an immediate threat," Hurtt said.

The police union documented 500 police calls in October where victims waited up to 12 hours and 39 minutes for an officer to arrive.

Union president Hans Marticiuc told city council that what's needed is more overtime and less paperwork to put more officers on the street.

"A lot of these issues that were brought up was already on our table for discussion and planning," Hurtt said.

The chief said the department has budgeted $4 million in overtime for the rest of the year. The city is also accelerating police cadet classes, and moving to free up officers currently working jail jobs.

To alleviate paperwork, the department will buy 2,200 laptop computers for officers and set up an Internet site for crime reporting.

"Within the year, hopefully, we'll be in a position were citizens will be able to report some minor offenses online," Hurtt said.

Even with the changes, the department will not be able to keep up with officer attrition. About 700 officers have retired over the past two years and Hurtt expects to lose 200 more each year, for the next five years.

HPD currently has 4,728 officers. The chief said he'd like to have an additional 1,700.

# 10580. Plan aims at offsetting officer shortage (KTRK)

Plan aims at offsetting officer shortage
Initiatives to fix manpower shortage

"We have lost 700 people-plus, and the population's increasing," Houston Police Chief Harold Hurtt said Friday. "We just picked up another 150 to 200,000 people from Louisiana. So we have some significant challenges."

(12/03/05 - HOUSTON) - Retired officers and untrained recruits will take on Houston police duties to mitigate the force's manpower shortage, Police Chief Harold Hurtt said.

Hurtt announced the plan Friday as part of a series of initiatives to more adequately staff the department, which has decreased by hundreds of officers in the last two years.

"We have lost 700 people-plus, and the population's increasing," Hurtt said. "We just picked up another 150 to 200,000 people from Louisiana. So we have some significant challenges."

While Hurtt noted Friday that the city's crime rate has actually decreased, the manpower shortage has proven a troubling issue for more than a year. Hurtt endured particularly harsh criticism following the Thanksgiving holiday weekend, during which 14 homicides took place across the city.

The reinstatement of retirees and scheduling of cadets who have not yet completed academy training will put 150 more officers on city streets, Hurtt said. He said many cadets would replace officers working as jailers, subsequently putting those officers in the field. Hurtt's plan also calls for officers currently assigned to administrative positions to report for field duties once a month.

Hurtt's initiatives also included a $4 million overtime program placing officers in high-crime areas and apartment complexes. Hurtt said contract issues would need to be addressed but he hoped to place the officers within the next month.

"We will select a couple of those locations and have a very intensive program for about three months and do an evaluation, then decide where we go from there," Hurtt said.

He said a previous request to finance a similar overtime program had been refused by the city, so 75 percent of the money for the current plan was taken from areas of the police budget -- including insurance and retirement.

Houston Police Officers Union President Hans Marticiuc hailed Hurtt's initiatives as "a step in the right direction" but questioned the use of retired officers.

"It would give me all kinds of heartburn to see someone who's retired come back in here and take the position of a current officer, let's say in investigations," Marticiuc told the Houston Chronicle. "I'm not sure that they can just bring back retirees to work."

Hurtt acknowledged that problems would arise from the initiatives but encouraged cooperation -- including from citizens -- in order to make the city safer.

"We know, as a police agency, that we cannot make up the slack for 700 officers retiring since the beginning of '04 with an overtime program and our hiring efforts," he said. "If we're going to have a safer city, we need every resident to do their part."

Depends.

The radios must be affiliated with both the Tomball and the
Downtown sites. Of course, one radio cannot be in contact
with both sites at the same time, unless allowed by the Borgnet
administrator. Normally, there must be a radio affiliated
with Tomball and one affiliated with Downtown for both sites
to repeat the traffic.

For example, Patrol District 5 is most likely programmed to
communicate with Tomball and Downtown. Before Westlake FD
went completely UHF, you could hear the Dispatch TG on both
the Downtown and Clodine towers. But, when they used Ch. 2,
it was only heard on the Clodine tower. This is probably
because they used their handhelds for Ch. 2, and the vehicle
radios for Ch. 1. And, West University Place will normally
be heard on Downtown only, since they are just SW of downtown,
unless there is either a radio in the Tomball area, or
propagation allows a WUP radio to "travel electronically" to
the Tomball site.

I have seen an MTS 2000 radio in the Jersey Village area
affiliate with the Baytown site. One would have expected
Clodine, Tomball, or Downtown. But conditions were just right,
and the radio "travelled" cross-county.

It also has a lot to do with where each radio is. Like right now, you could listen to my TGs on the Brazoria site because that is where I am affiliated right now plus Clodine since I know there is at least one radio on in the district. I guess theoretcially speaking, if we had one radio in the area and affiliated with all the sites, when one person keys our TG, you could hear on all the sites.

I stand corrected. I have heard comms about Terminal D.
I guess this narrows down the location

Listen out for another talkgroup fron the same
location. I heard it but was unable to stay long
enough to find more. I will post it tomorrow unless
someone beats me to it.

I was listening to HPD Central 460.1000 and heard the most amazing sounding dispatcher. You could not only understand him, but he was responsive to the officers and actually sounded like enjoyed his job. HPD needs to find more like the one on the Central Mic.

You should have been listening years ago to central their was a dispatcher on their that worked 6-2 and he was on of the many that you could understand with no problem. That when they use to be in the communications bldg. and at the time Charlie bullock was captain over the communications division, and that was way before any of the channels were recorded especially channel 8.

Rob Camper <robcamper@...> wrote:

Oh what a sound for sore ears! It's nice to have someone who can speak clearly and distinctly. Let's hope he's on the air for more than a few days.

I work in the communications industry, and this is something they train us to look for when doing recordings (I unfortunately am one of those guys that writes the "Press 1 for sales, press 2 for service" type telephone prompts).

You were probably listening to "Chopper Bill" who has started working for
HPD as a dispatcher again. Booming clear voice and knows what he's doing. I
think he's working nights now but may have been up there on eves today. There
are very few guys working up there, and he's by far the loudest and
clearest...

Steve

As I don't monitor most of HPD anymore, I'm ignorant of who's on Central tonight. However, HPD has had several good dispatchers over the years. The older lady who works Westside most evenings is certainly no slouch. (Yes Steve, you may quote me on that.) Another that comes to mind was "John," who I seem to recall was also a reserve officer. I personally think that should be required for all large city dispatchers, because doing field work obviously helps to teach you a new perspective!

Personally, I enjoy listening to the woman who words SW/Fondren on
overnights. She's often heard joking (in an almost non-joking way) with
the officers, and has been known to be amused at things a time or two.

From: Myles Barkman
Topic: 10596  Message: 10605

Yes, channel 8 is simplex 460.225 MHz. Sometimes used for BS, but often used for car-car at a scene where more than two officers need to coordinate something. Fox (HPD Helo) is sometimes the only unit you can hear on there. It helps to have an antenna up a few hundred feet.

# 10606. RE: [HoustonScan] HPD doing something right?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-13 12:56:51 UTC
From: Michael W. Jones
Topic: 10596  Message: 10606

About 8 years ago, I worked for a Utility Company in Kansas City (Similar to Centerpoint). We had a program called "Walk a mile in my shoes" where every call center agent got to spend a day in the field working alongside a gas crew, and another day with an electric crew. Then, each member of the crew would get to come in and spend the spend a day in the call center listening to calls.

It really opens your eyes to a new perspective and allows both sides to better understand each other. The program remained successful for the three years I was there.

A program like this could be applied in any industry, with minimal costs. In the case of HPD, let the call takers and dispatchers do a ride-along on occasion, then bring the officers in to listen to the calls coming in, as well as the dispatchers.

Now if HFD could do something like that with robo-dispatcher on TAC-1, but that's another discussion for another time.

Subject: RE: [HoustonScan] HPD doing something right?

As I don't monitor most of HPD anymore, I'm ignorant of who's on Central tonight. However, HPD has had several good dispatchers over the years. The older lady who works Westside most evenings is certainly no slouch. (Yes Steve, you may quote me on that.) Another that comes to mind was "John," who I seem to recall was also a reserve officer. I personally think that should be required for all large city dispatchers, because doing field work obviously helps to teach you a new perspective!

Oh what a sound for sore ears! It's nice to have someone who can speak clearly and distinctly. Let's hope he's on the air for more than a few days.

I work in the communications industry, and this is something they train us to look for when doing recordings (I unfortunately am one of those guys that writes the "Press 1 for sales, press 2 for service" type telephone prompts).

I was listening to HPD Central 460.1000 and heard the most amazing sounding dispatcher. You could not only understand him, but he was responsive to the officers and actually sounded like enjoyed his job. HPD needs to find more like the one on the Central Mic.

I think that dipstacher was Chopper Bob from 93q days. He use 2 fly in the helicopter with Fat Eddie or something like that. I think he used 2 disptach for Memorial Bunker hill vilages. He does sound good workin the Central channel. They must be tryin out some radio personalities to see if they can improve their image with the citizens. Waiting for him top do the call sign at the top of the hour.

Having known Chopper Bill for awhile and working with him for a while I
feel I can answer a few things.
Yes that is Chopper Bill doing dispatching for HPD. He has all dispatched
for many small PD's including Spring Valley.
I have heard him on Westside mic(460.150) I think it was two weeks ago today.
Bill was Chopper Bill on 93Q(KKBQ) and he cohort was Captain Eddie. Both
were airborne reporters for one of the traffic services.
Bill also worked for Advanced Communications of Texas for awhile.
I, too, feel that HPD needs to put him on a mic full time as it is nice to
be able to understand what the dispatcher is saying. To many of them sound
like there are marbles in their mouths.

From: Myles Barkman
Topic: 10596  Message: 10613

Well, I was referring to the helicopter being up several hundred feet but
yeah, you would hear a lot more if you had a ground-mounted antenna at about
500 feet. Problem comes when you try to hook that feedline up to a scanner.
Scanner + nice antenna in city = receive nothing
Better stick to a 30-50 foot high antenna (for a scanner).

Who is this Chopper Bill/Bob guy and why does every one know him. Why is he at HPD and not on the radio or announcing for the Texans or Astros. This guy has a great voice. Heard him dispatch a foot pursuit today. The dude kept his cool and was completely professional. That is amazing for someone who must of just started dispatching. He also seems to understand the two-way and how it works as opposed to the typical city/county mic who just uses the tool and not understand how or why it works. If this guy is a "personality" does he have a resume on-line? My curiosity is peeked!

If memory serves me correctly Chopper Bill, used to announce Traffic for TransStar which was broadcast by several of the Radio Stations that subscribed to his Helicopter Reports.

It's been a long day and that was a long time ago.

YMMV
Ben

Subject: [HoustonScan] Re: HPD doing something right?

Who is this Chopper Bill/Bob guy and why does every one know him. Why is he at HPD and not on the radio or announcing for the Texans or Astros. This guy has a great voice. Heard him dispatch a foot pursuit today. The dude kept his cool and was completely professional. That is amazing for someone who must of just started dispatching. He also seems to understand the two-way and how it works as opposed to the typical city/county mic who just uses the tool and not understand how or why it works. If this guy is a "personality" does he have a resume on-line? My curiosity is peeked!

If any of you had been around in the late 70's early 80's you would have a Dan he was dispatcher for the central mic and him you could understand . I think Pat was on Channel 7 and also worked channel 8.
Also if you listen to Southwest, after 10P the person on their was Wagner who now is night supervisor for westside channel......

Having known Chopper Bill for awhile and working with him for a while I
feel I can answer a few things.
Yes that is Chopper Bill doing dispatching for HPD. He has all dispatched
for many small PD's including Spring Valley.
I have heard him on Westside mic(460.150) I think it was two weeks ago today.
Bill was Chopper Bill on 93Q(KKBQ) and he cohort was Captain Eddie. Both
were airborne reporters for one of the traffic services.
Bill also worked for Advanced Communications of Texas for awhile.
I, too, feel that HPD needs to put him on a mic full time as it is nice to
be able to understand what the dispatcher is saying. To many of them sound
like there are marbles in their mouths.

# 10625. KATY Multi Alarm Fire .....????

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-15 00:52:45 UTC
From: Tom Hughes
Topic: 10625  Message: 10625

Listening to my scanner last night caught this incident in progress and kept hearing a Command request for what souned like a "PAR" report. Not sure I understood the word correctly, but each apparatus reported "PAR" back to command. Initally this occured every 15 minutes and then was changed to every 30 minutes.

Being a retired volunteer firefighter, this did not sound like anything we did way back when.

TIA

Tom in Tomball, TX

Personel Accountability Report, I believe. i.e. is everyone accounted
for, safe (relatively speaking, heh), etc...

That was the Best Western (I believe) at Katy Fwy and Mason Rd. West
I-10, Cy-Fair, and Community VFDs (W I-10, primary). The PARs were
switched to 30min intervals around 10:45, as I remember.

Unfortunately, I was too far away, and with only a rubber-duck antenna,
to pick up the fireground simplex, and the chatter on the main ops
channel/talkgroup wasn't terribly interesting, over the time I listened.

# 10627. RE: [HoustonScan] KATY Multi Alarm Fire .....????

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-15 01:13:01 UTC
From: Scott Royall
Topic: 10625  Message: 10627

I think it's Personnel Accounting Report. Basically, it's an arrangement where, every x minutes, dispatch asks the apparatus captain to check on all of his firefighters. This is meant to reduce the possibility of one getting trapped and forgotten.

# 10628. Re: KATY Multi Alarm Fire .....????

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-15 05:29:48 UTC
From: bpckty1
Topic: 10625  Message: 10628

I live near the scene, and the only fireground related frequencies I heard was 154.2800, and that was after HFD arrived, and C-F FD 6. All other comms were on W I-10 Primary (patched to Cy-Fair FD 6). Katy FD did not appear to be patched, since the ladder truck was talking with their dispatcher, and was not being simulcast on W I-10.

Since most FDs in the area (Harris County and Ft. Bend County) have Starnet talkgroups, they most likely were operating on W I-10's primary at the scene. The only transmissions I heard on the other Starnet FD talkgroups were admin type comms with their dispatchers/supervisors.

Interesting evening.

Subject: RE: [HoustonScan] HPD doing something right?

As I don't monitor most of HPD anymore, I'm ignorant of who's on Central tonight. However, HPD has had several good dispatchers over the years. The older lady who works Westside most evenings is certainly no slouch. (Yes Steve, you may quote me on that.) Another that comes to mind was "John," who I seem to recall was also a reserve officer. I personally think that should be required for all large city dispatchers, because doing field work obviously helps to teach you a new perspective!

Oh what a sound for sore ears! It's nice to have someone who can speak clearly and distinctly. Let's hope he's on the air for more than a few days.

I work in the communications industry, and this is something they train us to look for when doing recordings (I unfortunately am one of those guys that writes the "Press 1 for sales, press 2 for service" type telephone prompts).

I was listening to HPD Central 460.1000 and heard the most amazing
sounding dispatcher. You could not only understand him, but he was
responsive to the officers and actually sounded like enjoyed his job.
HPD needs to find more like the one on the Central Mic.

fyi..is anyone listening to this major accident at about 11pm
cst...involving a roll over and I heard 3 lifeflights went to
it.Now,an hour later another major accident in Baytown.
Think they're gonna need life flight too.

I dunno just how much this board is checked, maybe these messages get
read daily at best.
Just thought I'd post...

Btw, just how many life flight choppers we have, 5?

Channelview called for a mutual aid from Pasadena at about 1:40am.
Market and Sheldon rd
Pasadena Ladder 3, E 52, and E 81, along with Chief and Dist 2 chief
are on scene. They are still operating on a defensive basis.
Pasadena is operating on Star-Net 7312(Fire 2) off the Pasadena site.
Still active as of 2:45am.

# 10633. New Federal Freq Downtown?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-19 19:58:17 UTC
From: Michael W. Jones
Topic: 10633  Message: 10633

Been monitoring the usual traffic as I am packing for my Holiday trip. BCD396T Close Call alerted to a hit. Suspecting the usual background noise that falses quite frequently in my area just west of downtown, I went to clear it. This time though, I got a clear (non-digital/non-encrypted) voice.

The frequency is 415.775, PL 82.5. Lots of background conversation, cell phone rings, short conversation, "Oh..." and it goes dead. I suspect that the users were at Star Pizza or Cosmos around Washington and Heights (based on the close call trigger).

As I typed this, another comm came through talking about being 10-8 and two unit numbers transporting 1 to the Harris County Jail. Signal was much weaker, so this might be the repeater input.

Any thoughts?

Mike Jones

# 10636. RE: [HoustonScan] New Federal Freq Downtown?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-19 21:19:47 UTC
From: Michael W. Jones
Topic: 10633  Message: 10636

<http://home.houston.rr.com/freqzone/freqs/freqs.html>
http://home.houston.rr.com/freqzone/freqs/freqs.html says it's USPS Postal Inspectors or Postal Police. Been monitoring, not enough traffic to confirm as of yet.

RadioReference does not list it either nationwide or locally.

To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] New Federal Freq Downtown?

Been monitoring the usual traffic as I am packing for my Holiday trip. BCD396T Close Call alerted to a hit. Suspecting the usual background noise that falses quite frequently in my area just west of downtown, I went to clear it. This time though, I got a clear (non-digital/non-encrypted) voice.

The frequency is 415.775, PL 82.5. Lots of background conversation, cell phone rings, short conversation, "Oh..." and it goes dead. I suspect that the users were at Star Pizza or Cosmos around Washington and Heights (based on the close call trigger).

As I typed this, another comm came through talking about being 10-8 and two unit numbers transporting 1 to the Harris County Jail. Signal was much weaker, so this might be the repeater input.

Any thoughts?

Mike Jones

Ok,

I know how to program the scanner however I am not able to get the CC on the scanner screen. I do not hear the annyoning control channel noise when I try all the control channels. I have been up in huntsville for school. Another thing that I have noticed is that RMT is on. I am not used to having this displayed. Any help would be apperiacted.

Thanks,

Grant

# 10640. Motorola talkgroup patching

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-20 23:16:54 UTC
From: Myles Barkman
Topic: 10640  Message: 10640

Not sure how many folks are aware of talkgroup patching on type II Motorola systems.
Around here, this is most often done during slower periods when one dispatcher can take over the duties that several may occupy during heavier call volume.
For instance, sometimes the West (District 4) SO dispatcher will also dispatch for Northwest (District 5). To help her do this, talkgroup 18480 will be patched to 9008.
For folks with older generation 1 trunk trackers (BC235), you will see talkgroup 9011 and 18483.
You will also see this on the newer trunk trackers if you status bit OFF.
For folks in the field, it works as if they are all on one talkgroup, which is good that they don't all have to remember to change talkgroups when they do have a dedicated dispatcher for their own district.
For scanner listeners, this can keep you from hearing what you want to hear if you have only certain talkgroups programmed.

For instance, if you were only interested in listening to Northwest District and had your scanner set to look for talkgroup 18480, if the 9008 dispatcher patches in 18480, only 9008 will be heard over the scanner. All District 5 folks will be coming over 9008 as if they had switched to that talkgroup.

This happens more that you may think. So if you ever wonder why a talkgroup is so quiet, it may be because it has been patched into another dispatcher's console.

Some folks that often patch talkgroups:
HCSO
TXDOT
Metrolift
Brazoria Co SO
Fort Bend Co SO
Centerpoint Energy (on their trunk system)

Now it would be great if the scanner manufacturers started letting this feature work in scanners like it does on true two-way radios. I don't see why it wouldn't work. It could even display the talkgroup it is being patched from.

So if you really want to make sure you don't miss anything on your talkgroup of choice, you may need to program in other talkgroups that patch yours and put up with the extra traffic. Then there is the case where the dispatcher on YOUR talkgroup patches another talkgroup(s) and you are forced to listen to units from other areas on the one you want to listen to. In these cases, there is nothing that can be done to separate conversations for that particular area/talkgroup.

In the case of Centerpoint Energy, sometimes the entire Houston region is patched together onto one talkgroup. To the field unit, he can't tell the difference except that every trouble talkgroup he goes to is carrying the same conversation. To the person with a scanner, only one talkgroup will be active, so you hope you are listening for it or you won't hear anything.

# 10641. RE: [HoustonScan] Motorola talkgroup patching

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-21 00:32:23 UTC
From: Scott Royall
Topic: 10640  Message: 10641

Myles,

This does not compute. Both TGs MUST be in the CC data stream in order to tell all the affected radios which repeater to use. That's why patching works, because, as you correctly said, it's transparent to the radios. If it wasn't, District 6 radios wouldn't work either. The controllers are nothing more than computers, and patching is just tying two TGs together logically. In other words, TG 9008 and 18480 point to the same frequencies during patching. The important point is that neither TG disappears on the CC.

They are in the data stream when the talkgroup becomes active. It lists all other talkgroups that are patched together. But this info is only utilized by two-way radios, not scanners.
Sometime I'll have to get on here real time when two talkgroups are patched together and demonstrate this possible oversight of the scanner internal programming development.
Right now, I can see that Brazoria County 23952 is patched with 23984. You will only hear activity on 23952 though. You can verify by turning the status bit off and seeing 23955 but not 23987. If she patched 23952 to 23984, then you would see 23987 and not 23955. They can run it either way and it makes no difference to them. But it does make a difference if you try to monitor one or the other on a scanner.
Also Metrolift 19344 (Ch.1) is patched with 19376 (Ch.2). You will only hear 19344. (but who listens to these guys anyway)

Looks like Fort Bend Co SO is running two separate talkgroups for Patrol 1 and Patrol 2 so no patching for them right now.

# 10643. RE: [HoustonScan] Motorola talkgroup patching

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-21 04:24:22 UTC
From: Scott Royall
Topic: 10640  Message: 10643

I understand your point, and it's an interesting one. What happens if your scanner is programmed to get both TG in a patched pair? It works here. If you think about why TG are patched in the first place, it is likely that a scanner has the TG that are patched. In other words, the developers of scanner software probably felt that implementing TG patching wasn't worth doing. :(

# 10644. Re: [HoustonScan] Motorola talkgroup patching

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-22 00:15:45 UTC
From: KB5FLX
Topic: 10640  Message: 10644

I HAVE HEARD THAT SOME OF THE SPECTRA RADIOS WILL HEARD PATCHED CALLS
AND SOME DO NOT.
IT APPEARS THAT ALL STX MONITOR RADIOS WILL PICK UP BOTH TG'S ON EITHER TG.

ANY IDEAS WHY OR HOW TO CORRECT?
---
---.

Scott Royall wrote:

# 10645. base jumping

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-23 17:30:11 UTC
From: Myles Barkman
Topic: 10645  Message: 10645

Anyone thinking about BASE jumping from a radio tower might think twice
after hearing about this guy. Listen to the 911 call he made while dangling
200 feet off the ground.
Calltaker asks "it is northbound or southbound". Happy Birthday Mr. Agnos.
Now pay the man over there, and over there, and...
http://www.wirelessestimator.com/basejumper.cfm

Here's a statement he made after he was rescued.
http://www.blincmagazine.com/forum/showthread.php?p=56787#post56787

And here's the rescuing fireman's story.
http://kxtv10.net/storyfull2.aspx?storyid=13955

Also read about this lucky(?) tower climber's experience when he tried to
cut corners.

# 10646. Hello

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-24 17:18:50 UTC
From: JoAnna
Topic: 3585  Message: 10646

Was wondering if anyone know the frequencies for the following Cities
Brazoria
Clute
Lake Jackson
Freeport
Sweeny
West Columbia
If anyone does please let me know I have been trying to find them
everyone and cant seem to come up with them. Bought hubby a scanner
for christmas and would like to program it with the following areas
thanks so much in advance

# 10647. Re: [HoustonScan] Hello

Yahoo group: HoustonScan (2005 — 2006)

From: Myles Barkman
Topic: 3585  Message: 10647

Just so happens, we've been discussing these lately (at least the fire departments).
Here's the latest I have for everything in Brazoria County. Still some unknowns.
If you are looking for police or anything else, look in these two lists:
http://home.houston.rr.com/freqzone/freqs/hou_freq.html
http://home.houston.rr.com/freqzone/freqs/star-net.html

Alvin *(STAR-Net talkgroup 12624)*
Angleton 46.380 (STAR-Net talkgroup 25296)

Brazoria *460.600(pl 123.0)* or STAR-Net talkgroup 24720

Brazoria County 46.140

Brookside Village

Clute 155.415

Columbia Lakes (served by West Columbia?) 453.775

County Rd 143 VFD (S of Pearland/NW of Alvin) *46.140*(dispatched by Pearland),453.175

Damon 46.160,460.6125 (west Brazoria Co)

Danbury *154.250*

Demi-John Island 153.965 (NE of Clute)

Freeport *154.325(pl 146.2)*, 155.955(pl 146.2)

Holiday Lakes 453.1625

Iowa Colony *460.6375(pl 173.8)*

Jones Creek 453.075

Lake Jackson *453.8375(pl 210.7)*

Liverpool 155.925

Manvel 453.125 or *453.625(pl 192.8)*

Old Ocean 453.250 or 453.300 or 453.325 or 453.525 or 453.125

Oyster Creek 46.260

Pearland *453.850(pl 146.2) (Star-Net talkgroup 13680)*

Richwood 46.160

Rivers End 453.600

Rosharon 46.120

San Bernardo 453.575

Surfside Beach (served by Freeport?)

Sweeny 154.220 or 158.805

West Columbia 453.775 or 453.325

Wild Peach 453.350

Wolfe Air Park ?

# 10649. Re: [HoustonScan] Re: Hello

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-26 04:30:58 UTC
From: Myles Barkman
Topic: 3585  Message: 10649

It is a subaudible tone used to let agencies share the same frequency without causing interference to one another. That's the idea anyway. For folks with scanners that have the capability, it is a way to select a particular user on a frequency without having to hear other ones that share it.
If your scanner does not have that feature, you will just hear every user on the frequency.

# 10650. FYI, YahooGroups down time

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-26 04:53:00 UTC
From: Myles Barkman
Topic: 10650  Message: 10650

Outage Advisories

Yahoo! Groups will be performing critical database maintenance this
week. During this maintenance work, 25% of groups will be offline.
Messages sent to affected groups during this interval will be queued
and delivered once the groups are back online.

The work is currently scheduled for Tuesday night, December 27th, from
9:00 PM until 2:00 AM Wednesday morning Pacific time (Wednesday morning
5:00-10:00 AM GMT). However, there is a chance it may need to be
delayed until later in the week. We will keep this page updated with
the latest information.

(OK, so that's 11pm-4am Houston time), mostly early Wed morning.
So any of you night owls out there, don't freak out if your posts don't come
up instantly.

# 10651. Trunk programing??-Freq's

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-26 17:36:12 UTC
From: Tom Hughes
Topic: 10651  Message: 10651

January issue of Popular Communication has an article about programing
a trunk system. One of the comments says that for a Motorola system
you only have to program the control freq's.

I was under the impression that you had to program all of the freq's.

Is this correct.....????????????

# 10652. HAS- EDACS Trunk System

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-26 17:47:25 UTC
From: Tom Hughes
Topic: 10652  Message: 10652

I have programmed this system but have yet to hear any trafic. Is this system really operational.

I sometimes hear talkgroup 22736 on the Starnet system, with traffic that sounds like it is at an airport.

Whats up.....???

# 10653. Re: [HoustonScan] HAS- EDACS Trunk System

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-26 19:12:43 UTC
From: Eric C. Carlson
Topic: 10652  Message: 10653

That EDACS system has not existed for some time now. All airport
operations moved to STARNET.

-Eric

From: Myles Barkman
Topic: 10651  Message: 10654

If your scanner is capable of what they call "control-channel only
trunking", then you only need to program the control channels.
Most newer trunk trackers can do this. That is only for 800 and 900 MHz
Motorola type 2 trunk systems.

I'm from Lake Jackson and I have gathered 15 years
worth of frequencies for that area. My Dad got me
interested in scanners when I was 14. I can e-mail a
list of everything you ever wanted to listen to on
Wednesday evening.

What kind of scanner is it? If you need help with
programming we could meet somewhere if you'd like.
Just e-mail off list and we'll see...

Subject: Re: [HoustonScan] Pro-2051 Question

Use Plan II for all the sites, except Pasadena and the Huntsville/Walker Co. sites. They use Plan I. The instruction manual with your scanner should have a detailed description of what plan you should use for different systems.

Sorry for being off topic but I was wondering what the bright light in the evening western sky is? It's very bright and appears just after sunset. It's more likely a planet than a star, since it's much brighter than any of the stars. Any help identifying this would be greatly appreciated!

Thanks and Happy New Year!
Marvin Suggs

Hey guys I was just wondering if HFD's dispatched only by that robotic voice. I have that scanner frequency, but sometimes it's hard to catch what the voice is saying, like last night it pronounced beltway 8 by saying BW8, and also noticed it never really gives an address, but a street and cross street. Was just wondering if there was a frequency for a human voice dispatch.

# 10664. RE: [HoustonScan] astronomy question

From Sky and Telescope.....

Venus (magnitude ?4.4, in Capricornus) is the bright "Evening Star" low in the southwest during twilight. It's getting lower every day now. In a telescope or even steadily mounted binoculars, Venus is becoming an ever thinner but larger crescent;

The best time to observe Venus telescopically is when it's high in the sky in broad daylight during afternoon ? if you can find it. Start with binoculars, but don't accidentally sweep your view over the blinding Sun!

Mars (about magnitude ?0.8, in Aries) shines yellow-orange high in the south during early evening. It's shrinking and fading into the distance as Earth pulls farther ahead of it in our faster orbit around the Sun. In a telescope Mars is now down to 13 or 12 arcseconds wide.

I just got the BCD396T for Christmas and i programmed the tones that Myles gave me for Pasadena Fire. After listening to the tone test both last night and tonight, all of the tones work except Dist's 7,8,and 10. Myles do you think that those are bad tones you gave me, or is my radio not working right?? Also do you think you can analyze Deer Park's tone so i can program it as well.

Thanks alot,
Niko

Ok I am able to plug in the normal frequencies, like HFD TAC channels and HPD channels and all that good stuff. But I need help figuring out how to enter the trunk frequencies because I see a lot of stuff I would like to have, but don't know how to enter them in my scanner. I have read the instruction manual, and am having a hard time making sense of the jargon. I have a radio shack pro-97, 1,000 channel triple trunking handheld if that's any help!

I heard that they were eventually going to move to STARnet.

Is that true?

I can try to check them again.
The program I was using was a trial and it's time expired.
Does anyone have audio software that can analyze waveforms?
I was using a trial version of Adobe Audition 1.5 which is like Cool Edit
by Syntrillium.
I still have Cool Edit on an older computer, just don't have a way to get it
on the new one.
Anyone still have Cool Edit? It's great for this kind of stuff.

From: Myles Barkman
Topic: 10680  Message: 10680

Here's my original post on Pasadena's tones.
I just analyzed the tones I recorded back in October with a trial version of Cool Edit Pro 2.00 that I found on the web and found the info to be the same.
Perhaps some day soon, I'll get one of those 396 and try it out for myself.

I don't know why some would work and others don't.

I think that's the one I heard up in Johnson County, Kansas the last few days... You could really understand it, and the bonus was if your MDT was on the fritz you didn't have to guess at the call, it was all there in plain spoken English, unlike that piece of junk we have here (and I heard it on a firefighters HT recently, and it sounds just as crappy on it as it does our scanners.)

Hey guys I was just wondering if HFD's dispatched only by that robotic voice. I have that scanner frequency, but sometimes it's hard to catch what the voice is saying, like last night it pronounced beltway 8 by saying BW8, and also noticed it never really gives an address, but a street and cross street. Was just wondering if there was a frequency for a human voice dispatch.

I sort of doubt it. Eloquence is purely software, and it has a strange history. It was first created at Cornell for the DoD around 1995. Even then, it could kick ass and take names! :-) After that, it basically collected dust on a shelf somewhere. A group from Cornell did form a venture about '97 to market Eloquence to developers, but not much happened. I was one of very few people who stumbled on it, and, since I needed a synthesizer that really worked, I developed a user interface for it. Eloquence itself is really little more than a DLL. You need to incorporate it into some kind of Windows software.

Eloquence was eventually sold to a big German company, SpeechWorks, which sells it as a so-called low-cost alternative to their main product, RealVoice. The funny part is, I've compared both speech engines, and Eloquence sounds slightly better.

I made Eloquence the heart of a system I call Xpress-It, and I've been trying to market it to the Augmented and Alternative Communication community for three years without success. You'd be stunned at how resistant people in that field who make purchasing decisions are to new concepts. It's almost as if they believe computers are supposed to sound crappy. They have very firm ideas what the user interface should do, but they rarely understand how crucial the synthesizer quality is. It doesn't matter how quickly a disabled user can enter whatever he wants to say if his co-workers can't easily understand the output! Of course, the whole idea of a severely disabled person actually working in a professional environment like Shell is also a rather novel notion to that community.

Sorry folks, that's a rather sore subject, but yes, HFD is 15 years behind in synthesizer technology. :-(

Subject: RE: [HoustonScan] Frequency

I sort of doubt it. Eloquence is purely software, and it has a strange history. It was first created at Cornell for the DoD around 1995. Even then, it could kick ass and take names! :-) After that, it basically collected dust on a shelf somewhere. A group from Cornell did form a venture about '97 to market Eloquence to developers, but not much happened. I was one of very few people who stumbled on it, and, since I needed a synthesizer that really worked, I developed a user interface for it. Eloquence itself is really little more than a DLL. You need to incorporate it into some kind of Windows software.

Eloquence was eventually sold to a big German company, SpeechWorks, which sells it as a so-called low-cost alternative to their main product, RealVoice. The funny part is, I've compared both speech engines, and Eloquence sounds slightly better.

I made Eloquence the heart of a system I call Xpress-It, and I've been trying to market it to the Augmented and Alternative Communication community for three years without success. You'd be stunned at how resistant people in that field who make purchasing decisions are to new concepts. It's almost as if they believe computers are supposed to sound crappy. They have very firm ideas what the user interface should do, but they rarely understand how crucial the synthesizer quality is. It doesn't matter how quickly a disabled user can enter whatever he wants to say if his co-workers can't easily

understand the output! Of course, the whole idea of a severely disabled person actually working in a professional environment like Shell is also a rather novel notion to that community.

Sorry folks, that's a rather sore subject, but yes, HFD is 15 years behind in synthesizer technology. :-(

I think that's the one I heard up in Johnson County, Kansas the last few days... You could really understand it, and the bonus was if your MDT was on the fritz you didn't have to guess at the call, it was all there in plain spoken English, unlike that piece of junk we have here (and I heard it on a firefighters HT recently, and it sounds just as crappy on it as it does our scanners.)

Subject: [HoustonScan] Frequency

Hey guys I was just wondering if HFD's dispatched only by that robotic voice. I have that scanner frequency, but sometimes it's hard to catch what the voice is saying, like last night it pronounced beltway 8 by saying BW8, and also noticed it never really gives an address, but a street and cross street. Was just wondering if there was a frequency for a human voice dispatch.

Subject: Re: [HoustonScan] Motorola talkgroup patching

They are in the data stream when the talkgroup becomes active. It lists all

other talkgroups that are patched together. But this info is only utilized by two-way radios, not scanners.
Sometime I'll have to get on here real time when two talkgroups are patched together and demonstrate this possible oversight of the scanner internal programming development.
Right now, I can see that Brazoria County 23952 is patched with 23984. You will only hear activity on 23952 though. You can verify by turning the status bit off and seeing 23955 but not 23987. If she patched 23952 to 23984, then you would see 23987 and not 23955. They can run it either way and it makes no difference to them. But it does make a difference if you try to monitor one or the other on a scanner.
Also Metrolift 19344 (Ch.1) is patched with 19376 (Ch.2). You will only hear 19344. (but who listens to these guys anyway)

Looks like Fort Bend Co SO is running two separate talkgroups for Patrol 1 and Patrol 2 so no patching for them right now.

Subject: RE: [HoustonScan] Motorola talkgroup patching

Myles,

This does not compute. Both TGs MUST be in the CC data stream in order to tell all the affected radios which repeater to use. That's why patching works, because, as you correctly said, it's transparent to the radios. If it
wasn't, District 6 radios wouldn't work either. The controllers are nothing
more than computers, and patching is just tying two TGs together logically.
In other words, TG 9008 and 18480 point to the same frequencies during patching. The important point is that neither TG disappears on the CC.

-----Original Message-----
From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Myles Barkman
Sent: Tuesday, December 20, 2005 5:17 PM
To: HoustonScan
Subject: [HoustonScan] Motorola talkgroup patching

Not sure how many folks are aware of talkgroup patching on type II Motorola
systems.
Around here, this is most often done during slower periods when one dispatcher can take over the duties that several may occupy during heavier call volume.
For instance, sometimes the West (District 4) SO dispatcher will also dispatch for Northwest (District 5). To help her do this, talkgroup 18480 will be patched to 9008.
For folks with older generation 1 trunk trackers (BC235), you will see talkgroup 9011 and 18483.
You will also see this on the newer trunk trackers if you status bit OFF.
For folks in the field, it works as if they are all on one talkgroup, which
is good that they don't all have to remember to change talkgroups when they
do have a dedicated dispatcher for their own district.
For scanner listeners, this can keep you from hearing what you want to hear
if you have only certain talkgroups programmed.

For instance, if you were only interested in listening to Northwest District

and had your scanner set to look for talkgroup 18480, if the 9008 dispatcher

patches in 18480, only 9008 will be heard over the scanner. All District 5
folks will be coming over 9008 as if they had switched to that talkgroup.

This happens more that you may think. So if you ever wonder why a talkgroup

is so quiet, it may be because it has been patched into another dispatcher's

console.

Some folks that often patch talkgroups:
HCSO
TXDOT
Metrolift
Brazoria Co SO
Fort Bend Co SO
Centerpoint Energy (on their trunk system)

Now it would be great if the scanner manufacturers started letting this feature work in scanners like it does on true two-way radios. I don't see why it wouldn't work. It could even display the talkgroup it is being patched from.

So if you really want to make sure you don't miss anything on your talkgroup

of choice, you may need to program in other talkgroups that patch yours and
put up with the extra traffic. Then there is the case where the dispatcher
on YOUR talkgroup patches another talkgroup(s) and you are forced to listen
to units from other areas on the one you want to listen to. In these cases,

there is nothing that can be done to separate conversations for that particular area/talkgroup.

In the case of Centerpoint Energy, sometimes the entire Houston region is patched together onto one talkgroup. To the field unit, he can't tell the difference except that every trouble talkgroup he goes to is carrying the same conversation. To the person with a scanner, only one talkgroup will be

active, so you hope you are listening for it or you won't hear anything.

I would suggest joining the Yahoo Pro-97 group. I also live in
Houston and just bought a pro-97.

Here is the group:
http://groups.yahoo.com/group/Pro-97/

Look in the files section for the file called Pro97
Recommendation..rtf

Also do some searches on programming trunk systems.

One tip that i have picked up, for the Motoral II system that
Starnet uses, you only have to program in the control channels.

Also look around www.radioreference.com.

Hope this helps.

They started it on 7 (Special Ops) and then switched it to 5 (Citywide). It
stayed on 5 until he was caught running across the HOV lane. There is no Tac
5 for HPD.

Not everybody at RadioShack is incompetent. I work at the RadioShack in Texas City. I've been a ham for over 35 years and have a degree in electronics. I'm also in charge of scanners, radios, etc. at the store. When a customer comes to buy a scanner. I make sure they get the one they need. And as an added customer-care feature, I program the scanner for the customer so they will have a completely functional scanner when they walk out happy. Needless to say I get a lot of return business. But I DO think it's unfair to lump all RS employees into the same rotten pile. There are employees that are just working for the pay vs. those that take their jobs seriously no matter where you go.

A couple of questions:

When you enter the frequencies (all you need to enter are the 2-4 control frequencies, depending on the site(s) you will be monitoring), is the mode set for MO or FM? The mode must be MO.

After entering the frequencies, and still in Program Mode, press the Orange T button to enter the talkgroups. Make sure the mode is set for MOT.

This should be all you need to trunk.

Ever hear of Uniden?
http://www.uniden.com/products/index.cfm?cat=scanners
http://scannerworld.com/ is just one of many and most online Ham stores
have scanners also.

There are plenty of places to buy scanners other then Rat er Radio shack.
The best they know how to do is to say: Want to buy a phone today? This is
while you are buying a diode to work on something.

Off my soap box now.

# 10701. RE: [HoustonScan] Re: More questions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-12-31 17:34:27 UTC
From: Michael W. Jones
Topic: 10669  Message: 10701

As someone who worked for the RS for 3 years in the early '90s, I agree that not everyone is incompetent.

Radio Shack corporate made a decision to change their methodology to be more of a consumer electronics store than a hobbyist store, and dropped a large number of product lines in the process. When I was there, I saw "sales weasels" that would try to take every high ticket item sale, and watch for customers making a bee-line for the parts at the back of the store (which they would promptly ignore).

Since I had two years electronics training, and know a difference between a resistor and a diode, I got stuck helping these people (which, like you, drove a large amount of my return customers - until they needed a high ticket item and the "sales weasels" would steal the sale).

Now go into any of the stores, and most (particularly mall stores), don't even have the parts anymore - and the few that do, have just a few drawers dedicated to them, not the whole back of the store.

That's why I appreciate Fry's keeping those parts around. Now if Fry's would just expand their scanner selection...

Mike Jones

Well friend I could careless that you work at the rs their in TexasCity
and for the degree am I suppose to be impressed?
Beleive me Im not just tell me that for the money you spent for the
degree you couldnt find a bettter job then what you have ..
And as for programming the scanners it seem to me that first of all if
the person that get it has no idea of how it work and cant read the
idiot book then they should have one in the first place
As for being a ham for 35 years that doesnt impress me either ,
apparently you are probably one of the one that has nothing better to
do then voice your feelins over the fcc dropping the code and making it
a little more easier to upgrade. To the next level .
Guess it hasn't occured to the ham community that at one time you were
nothing but a novice and with a little help you were able to up grade
to the next level ..
That what the so called elmers are suppose to do but its ashame that
people who want to be elmers cant seem to find the time to help ...
Its almost as a border line idiot that has no understanding of the term
hands on ...

# 10708. APCO-25?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-01 04:56:50 UTC
From: John Perry
Topic: 10708  Message: 10708

I've had a few customers ask me about APCO-25. I've searched RadioReference and other sources and have pretty much decided that APCO-25 is not available in Galveston County at this time. Are there any APCO systems in Harris County that they might try? Several of my curious customers have outside, mast-mounted scanner antennas and can pick up southern Harris County without difficulty.

From: Michael W. Jones
Topic: 10708  Message: 10709

The only APCO-25 systems that I'm aware of is the Federal Detention Center in Downtown Houston and the Government's system at Johnson Space Center. The JSC system is using encryption on top of APCO-25, so what few communications that I have heard are not understandable.

The Galveston County and BorgNet Motorola systems could be upgraded to APCO-25 voice with minimal repeater changes (although most radios would have to be replaced). To go full APCO-25 compliant, well, that's another (expensive) story. I suspect that if BorgNet retains it's growth rate, they would about have to convert to full APCO-25, just to handle the amount of traffic (and if I remember correctly, the number of frequencies per site limitation).

Most federal operations are using APCO-25 voice on their conventional frequencies as well. The TSA at both Hobby and Bush are running it, and I suspect the military at Ellington is using it. Check the Coast Guard in Galveston, as they might be using it as well.

They have the capability to use P25 on 157.050 MHz but rarely use it. I think I have even heard P25 on 345.000 MHz, but again, that is rare. Wasn't set up to decode P25 at the time so don't know if it's encrypted.

# 10713. NOAA Wx Radio

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-01 17:34:48 UTC
From: Myles Barkman
Topic: 10713  Message: 10713

Just found that Radio Shack carries this model Weather Radio that appears to have the newer Alert codes that were implemented in 2004.
http://www.nws.noaa.gov/os/eas_codes.shtml
http://makeashorterlink.com/?K13A4356C

The neat thing about this radio is that it comes supplied with software and a USB cable that will let you connect it to your computer. You can custom program the radio to alert you for only certain alerts for certain counties. But the most interesting thing I see about it is, the software will let you email out a message when the radio receives an alert. So you could have it alert you on your pager, cell phone, or other mobile device as soon as the alert is sent out. So if you keep your computer running anyway, this could be a faster way to receive warnings when you are away, and more custom made for your needs.
It will also let you review missed alerts.

Does anyone here have this RadioShack 12-258 SAME radio or know if a newer model may be on the horizon? The web page says the product is discontinued online but available in stores.
The biggest con I see is the cost of this radio. $70 is a bit steep I think.

The security at Ellington runs P25 in conventional simplex mode on
VHF. Dunno how well it carries down towards Galvestion, but I can hear
it off a back-of-the-set antenna here in Pasadena.

Word on the street is that every Starnet site upgrade and new site
installation is done with digital-capable Quantar/Quantro repeaters,
so it would just be a matter of any particular agency deciding they
wanted to use digital and upgrading their fleet. Should be interesting
to see what Friendswood does when they come online.

# 10722. group purpose

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-02 22:26:03 UTC
From: Myles Barkman
Topic: 10722  Message: 10722

For radio scanner enthusiasts in and around the Houston, Texas area. Posting of frequencies and certain *hot* channels when there is something big happening (use discretion).

This has been the description of the group since I started it over 6 years ago. It's purpose is to be a common meeting place for people to share information about the radio scanning hobby in the Houston, Texas area. You may be looking for information and someone else might have it. If you think someone else's post had incorrect information, you can mention it to the group in a civilized manner, or reply privately, in any manner you wish. There are almost 700 people subscribed to this list and I'll be willing to bet that most don't want to hear your opinions about matters that to not pertain to scanning. Opinions are like a certain lower body extremity, everybody has one.

Notice the description says nothing about bickering, arguments, personal attacks, anyone's mother, CERT training announcements, fake FBI/CIA emails, spelling, blah blah blah.......

While I may be interesting in getting CERT training, this is not the forum to dwell on the topic and constantly forward messages to a group whose purpose is not part of the topic. Folks that do not comply with these guidelines will be moderated or banned as needed.

There may or may not be a warning.

To prevent spamming on this list, I started having new folks put on moderate status automatically until it was determined that they were a real person and not a menacing spammer.

I have put a few people BACK on moderate status until they can show me that they can be a beneficial part of the HoustonScan society.

If you believe this is unfair in any way, you are entitled to your opinion. You have the option to stay on the list and grumble away to yourself, or you may take your chances and vent on the list.

I ALWAYS HAVE THE FINAL WORD! (on this list)

Life is too short for all the petty fighting I see going on. Too bad God promised not to flood the earth again. But that sure leaves the door open for other methods. Maybe fire, famine, disease, global warming...

Franklin Roosevelt said "If civilization is to survive, we must cultivate the science of human relationships - the ability if all peoples, of all kinds, to live together, in the same world at peace."

Let's pull it together people and prove that we humans are civilized and can do great things if we can set our differences aside. Remember Myles 1:1-And they shall beat their swords into scanners and their hate mail into smiley faces: scannist shall not lift up keyboard against scannist, neither shall they learning bitching any more.

Oh yeah, Happy New Year!

That's the one on a 300' DPS tower. Hadn't heard if it's on yet. I suspect it will be site 21.

I wonder if they licensed two just to try them out and see which one would work out better. Or maybe they already determined they needed two. Do they have any terrain up there?

# 10728. New dispatcher group for anyone interested

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-03 10:52:14 UTC
From: Aaron Siller
Topic: 10728  Message: 10728

This is a new paging company is anyone is interested in dispatching for it its called 1stresponderwirelessnews.com read below for some info

1st Responder Wireless News, a subsidiary company of 1st Responder News, is beginning our next phase of growth and expansion into the emergency notification service.

1st Responder Wireless News (1stR), already very active, and recognized by most media outlets and Public Safety Officials as the "Industry Leader" in CT, DE, MD, NJ, NY and PA, is actively looking for News Correspondents to become active as Incident Dispatchers for the Wireless News Division in your area.

1stR sends instant notifications for any newsworthy Police, Fire, Rescue, Traffic, Weather and Breaking News event within our coverage areas. The vast majority of our Dispatch Staff is comprised of both Volunteer and Career Firefighters, Police/Sheriff Officers, Haz-Mat & Rescue Technicians, 911 Dispatchers, ALS, BLS & OEM Personnel and Skywarn Spotters, on local, county, state and federal levels.

We have already began our expansion into AL, AZ, CA, DC, FL, GA, HI, IL, IN, LA, MO, MS, NC, NV, OH, SC, TX, VA, VI and WV, as well as having acquired three well known Paging Notification Services, with several additional under final negotiations. This is a very exciting time to become involved.

If you are interested, or would like more information, please check out the website at www.1stResponderWirelessNews.com and/or e-mail me at TX01@... or Sizzler81@...

The FCC Query put a build out deadline of November 3, 2005 for both sites in Waller County. Based on approximate coverage, the East tower (that's currently online) does not cover well in the extreme Western portions of the county, hence the need for the second tower.

I need to fine tune my coverage map (part of the project I'm working on), and if I get a chance, I will post it this evening.

# 10733. Re: [HoustonScan] StarNET in Waller County

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-03 22:18:24 UTC
From: navscanmaster@aol.com
Topic: 10726  Message: 10733

When I was staying over in Huntsville, the Phelps Tower, Site 20, would stay in trunking mode on my BC785D until about the Grimes County line on SH 30. I still haven't heard the DPS tower site come online yet, but I do remember a deputy talking about how they need the tower on the west side before running primary ops on 800. The terrain is not severe, but there are some thick woods in the national forest on the west side, as well as creek/river bottoms on the north side. Site 20 disappears on FM 1696, which is the northwest side. Coverage is always funny on the west side of Walker County. Huntsville PD's repeater is almost unaccessible until the West San Jacinto River Bridge. But the sheriff repeater on the Phelps tower is just so tall (600') that it covers the entire county well. All in all, if Walker County SO does intend on running their primary on Starnet, then the DPS tower site is needed. Otherwise, it'll be like Brazos County is now. VHF on the south side, 800 on the north side.

# 10735. RE: [HoustonScan] StarNET in Waller County

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-04 00:19:31 UTC

Topic: 10726  Message: 10735

Based on the map that I have drawn, the coverage concurs with what you said.
Also the comments about Brazos County would be similar to my map there.

If you're interested, I have made my map available for viewing at:

http://www.otsc.com/~mjones/StarNET%20Coverage%20By%20Tower.pdf

And if you have Delorme Street Atlas USA, you can import the data with this
Import file:

http://www.otsc.com/~mjones/StarNET%20Towers.txt

All coverage areas are approximate, based on Effective Radiated Power.

Subject: Re: [HoustonScan] StarNET in Waller County

When I was staying over in Huntsville, the Phelps Tower, Site 20, would stay
in trunking mode on my BC785D until about the Grimes County line on SH 30.
I still haven't heard the DPS tower site come online yet, but I do remember
a deputy talking about how they need the tower on the west side before
running primary ops on 800. The terrain is not severe, but there are some
thick woods in the national forest on the west side, as well as creek/river
bottoms on the north side. Site 20 disappears on FM 1696, which is the
northwest side. Coverage is always funny on the west side of Walker County.
Huntsville PD's repeater is almost unaccessible until the West San Jacinto
River Bridge. But the sheriff repeater on the Phelps tower is just so tall
(600') that it covers the entire county well. All in all, if Walker County
SO does intend on running their primary on Starnet, then the DPS tower site
is needed. Otherwise, it'll be like Brazos County is now. VHF on the south
side, 800 on the north side.

From: Myles Barkman
Topic: 10731  Message: 10736

I've never even heard them before. Don't know if I can hear them in
Pasadena.
Might try 146.2, 114.8, or 192.8 for starters.
Do they test receivers at a certain time so I can try to catch them?
Are they simulcast on their talkgroup 3632 on STAR-Net?

Hi Myles,
I'll give those a shot. Thank you. No, they don't do a regular pager test
and they are simulcasting their Starnet talk group.

Take care,
Marvin

Try this link. It has been listed on the DFW group and RRDB.
It is firefighting related for East Texas, so it may have what you need
for the Golden Triangel area.

The frequencies are at the end of the plan. It does not list normal
operations.

Last night, I heard an agency on 154.445 with 131.8 PL that sounded like a repeater.
They responded to a mall food court. Haven't been able to ID it yet. Band may have been a little open.

# 10746. GMRS Reapeater 5

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-05 19:23:24 UTC
From: Bill
Topic: 10746  Message: 10746

Hi all! Fairly frequently in the evening I hear a couple of guys talking on 462.650, which I have labeled as GMRS Repeater 5. Does anyone know what this is? Are there GMRS Reapeaters in Houston? They sound like they might be cops. Any ideas?

It is a repeater, they are all mostly cops, and you can visit their website at http://www.houstongrms.com/.

# 10760. General STAR-Net control channels??

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-07 06:27:10 UTC
From: niko627is
Topic: 10760  Message: 10760

Are there any control channels that i can program that will send me to any starnet communications? With this BCD396T it came with a preload STARNET and the control channel it always uses is 859.2375. That channel seems to direct me to all HCSO, HC Const., and Pasadena ID's. Just wondering if that control channel is from the main Starnet 001 site?

Thanks
Niko

# 10761. RE: [HoustonScan] General STAR-Net control channels??

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-07 06:58:37 UTC
From: Michael W. Jones
Topic: 10760  Message: 10761

You are correct. 859.2375 is one of the Downtown (Site-001) control channels.

In the BCD396T default configuration, there are Control Channels for most sites defined, and the following organizations:

Arcola PD
Baytown PD
Brazoria County Sheriff
Fort Bend County EMS
Fort Bend County Sheriff
Fresno Fire
Harris County Sheriff
Humble Fire/EMS
Humble Police
Jersey Vilage Police/Fire
Katy Police
Kendleton Police
Meadows Police
Needville Fire
Needville Police
Pasadena Fire
Pasadena Police
Pecan Grove Fire
Richmond Fire
Richmond Police
Rosenberg Fire
Rosenberg Police
Webster Fire
Webster Police
West I-10 Volunteer Fire
West University Place Fire
West University Place Police
Willow Fork Volunteer Fire

Keep in mind, most of these are dispatch talk groups only, so you might not hear much traffic on some of these, or references to channels. The radio will lock onto the first control channel it finds, so unless you're outside Beltway 8, you're likely to get the Downtown Site. If there are no radios with a specific department associated with the site, you won't hear their traffic.

Uniden acquired the data from RadioReference, so much is subject to change in the 7-9 months since the original firmware was finalized and loaded into the scanner. In my configuration, I now have 6 separate systems loaded in my scanner with StarNET (and as time permits, I've got two more planned),

just to be able to handle all the groups with some level of organization.

If I can be of further assistance, please let me know (I'm using a BCD396T as well)

Mike Jones

# 10763. fire tones for Humble and Little York FD's

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-07 09:05:39 UTC
From: Aaron Siller
Topic: 10763  Message: 10763

All of these tone were found with the help of Myles and thank you I will keep ya'll up to date as soon as I find more the ones below are confirmed and do work but you must enter these tone in the specific slot as it says or it will not work

Humble: 154.415 PL: 118.8

Fire:

Tone A=0.0
Tone B=726.8

Medic 1:

Tone A=617.4
Tone B=726.8

Medic 2:

Tone A=651.9
Tone B=726.8

Little York: 453.4625 PL: 192.8

There are three sets that I know of I am not sure which belongs to what station but I figured out 2 of the three sets that they have

Tone A=483.5, Tone B=1153.4

Tone A=539.0, Tone B=1153.4

# 10764. Control Channels....

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-07 20:29:05 UTC
From: jroftx
Topic: 10764  Message: 10764

Quick question:
When programming my scanner (Pro-95), I see that Clodine has the
following 'channels':
866.05000 866.48750 866.85000 867.07500 867.45000 867.55000
867.96250* 868.23750 868.32500 868.76250 868.92500*
With 868.925 shown as primary and 867.9625 as alternate.

Do I enter EACH of these channels or in only one required (with the
appropriate talkgroups) or is just one sufficient?

Assistance would be appreciated.

# 10765. RE: [HoustonScan] Control Channels....

Quick question:
When programming my scanner (Pro-95), I see that Clodine has the following 'channels':
866.05000 866.48750 866.85000 867.07500 867.45000
867.55000
867.96250* 868.23750 868.32500 868.76250 868.92500*
With 868.925 shown as primary and 867.9625 as alternate.

Do I enter EACH of these channels or in only one required (with the appropriate talkgroups) or is just one sufficient?

Assistance would be appreciated.

To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] fire tones for Humble and Little York FD's

All of these tone were found with the help of Myles and thank you I will keep ya'll up to date as soon as I find more the ones below are confirmed and do work but you must enter these tone in the specific slot as it says or it will not work

Humble: 154.415 PL: 118.8

Fire:

Tone A=0.0
Tone B=726.8

Medic 1:

Tone A=617.4
Tone B=726.8

Medic 2:

Tone A=651.9
Tone B=726.8

Little York: 453.4625 PL: 192.8

There are three sets that I know of I am not sure which belongs to what station but I figured out 2 of the three sets that they have

Tone A=483.5, Tone B=1153.4

Tone A=539.0, Tone B=1153.4

Thanks,

# 10767. StarNET in Galveston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-08 01:51:34 UTC
From: Michael W. Jones
Topic: 10767  Message: 10767

Went for a drive to Galveston today, and monitored some things with my scanner.

Site 18 (Texas City)? did not appear on the normal channels, but the Control Channel did appear on 866.5875. There was no activity while I was monitoring the Control Channel, so I did not get any other frequencies

Site 19 (Galveston)? also did not appear on the normal channels, but the Control Channel did appear on 866.4375. Again, no activity was detected while monitoring.

RadioReference had both of these frequencies assigned to the Galveston County trunked system, and the 866.4375 frequency also shows up on lists as being Site 18's control channel.

I also heard a TalkGroup 23955 on the Dickinson (Site 5) tower, which appears to be unidentified.

Anyone have any further input?

Mike Jones
Heights

Most likely, there will be traffic on TX City and Galveston weekdays when detectives/investigators/transportation, etc., travel to the Galveston area on followups at John Sealy and travelling to the TDCJ and TYC facilities in the area.

Seeing three active channels for Texas City site 18 now.
866.5875 control
866.625 voice
867.550 voice
See Seabrook PD using right now, talkgroups 20752 and 20784.
Alternate control may be 868.0625 which would not be good for me to pick up
so close to Baytown which is using 868.050 for control.

Can't pick up Site 19 on 866.4375. Either too weak for me, it jumped to
another frequency or it is not up right now.

This is the response I gave to someone else asking:

I got a trial version of Cool Edit Pro here:
http://www.softpedia.com/progDownload/Cool-Edit-Pro-Download-2076.html

You can select the part of the waveform with the tone you want to find the frequency of and then do ANALYZE-Show Frequency Analysis

The predominant frequency will show up in the box to the right under the waveform.
Increasing the FFT size will produce more accurate results.
This still may not be the exact frequency.
You can then check this against the standard table of pager tones here:
http://www.batlabs.com/qciitbl2.html
to figure out the closest actual frequency.

At least, that's how I've been doing it.
Takes a little work but that's the only means at my disposal to figure them out.

As far as the Ham Radio part:

There will be 2 nets

One for the course & one for Transport. These will be through repeaters

There will also be other simplex frequencies.

The person in charge of the Ham Radio communications has not told me
the exact freqs yet but once I get them I will forward them to the group

Hope this helps

Automatic Position Reportin System

Basically, amateur radio method of automatically transmitting the
position of a vehicle or asset.

You may look here for an example of my station:

http://www.findu.com/cgi-bin/find.cgi?wa2mct-7 Home
http://www.findu.com/cgi-bin/find.cgi?call=wa2mct-9 Mobile

If you know the names (may not necessarily be call-signs) you could see
where the ambulances, lead, etc., are.
Also, try:
http://webs.lanset.com/wa8lmf/aprs/index.htm
Weather:
http://www.aprs-is.net/Wx/
Here:
http://www.aprs.net
Is a map (java) you can zoom/ move to see all the stations nation wide or
in an area. Any 'CWxxxx) are weather stations.

APRS is Automatic Position Reporting System. It sends out your current coordinates over the radio, then people can go to the internet and look up your callsign and find your location.

That is a brief explanation.

Go to this website to learn more
http://www.cave.org/aprs/

hope that helps

Thanx again.

Is this system related to the positioning chips the runners are/were given when the marathon was sponsored by Compaq?

Nope. That system, the chip is an RFID chip. When the runner passed wtihin range of a reader (1-2 meters, the readers were on the ground), then they could tell runner #3 wearing RFID chip #xyzzzz passed that sensor.

So you spread readers and chips around and you can tell how the runners or the whole race is doing.

Another APRS use is the MS-150. Assets are tracked from Houston to Austin. A laptop or two, and projectors, are set up at command post. The managers can see:
Race lead
"Sag" - truck that is at the end, collecting riders and bikes who decide not to finish
Ambulances
Supply vehicles
The ambulance ones are important - because there are trained volunteer PD dispatchers at command post. They can decide based on where the hired ambulances are, to dispatch one of those, or, to call a nearby ambulance. They can see on a map where the ambulances are staged, and know if one of them is closer to an accident, or, call in an ambulance from a nearby juristiction along the route.

Knowing where the truck of water and gator aid is, lets them know how long (more or less) it may take to get water to a particular rest stop.

Unlike the RFID tag, the only support structure stuff are:
1. Vehicle - GPS receiver, data encoder, 144.39 transceiver.
2. Digital repeater - one in Lagrange, one in Belleville, several lower at home stations, one on a trailer for fill-in, several in Austin, several in Houston. These are there "all the time" not just for this event.
3. "Internet Gateway" - computer, software, 144.39 transceiver, modem (Terminal Node Controller, or TNC). These stations listen to 144.39, and inject the decoded data to a server on the internet. These are also there "all the time". It only takes one at each end to be effective.
4. Display laptop - at command post - can monitor 144.39 and also

the server on the internet.

So mostly existing resources are used. The chips used by compaq requires a network of sensors/readers - and those must all somehow get to the central server via a network or internet connection, etc. It would be pretty difficult to do that along the roads from HOU to AUS for the MS-150.

The APRS system can operate without the Internet component - while that is convenient for non-command center personnel, family members, etc., the command post folks will get their info without the internet part of it. So that's another advantage of the APRS system - doesn't totally rely on the Internet to function.

For both scanners,
http://www.prestigecom.net.au/catimages/OME20-527.pdf
says press the 0 key after you turn the scanner on a see "multi-system trunking scanner" display on screen.
Then press 1.
When you press ENT after that, it will display "initializing please stand by" for 5 seconds.

This will wipe out all info in the scanner. Do not turn off the scanner until the initialization is complete.

# 10787. HGX NEXRAD

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-13 12:37:20 UTC
From: KCOEJX
Topic: 10775  Message: 10787

What's up with the NWS radar? I realize that they are converting the output to a GIS compliant output, but how long is this going to take? The feed that I get my corporate weather info is completely useless. I have resorted to using the LCH and EWX radars to see what is going on. It has been four days since the HGX WSD-88 has been online. Is it down for repair or something?

I would really not want to take my info from the TV radars...

ADH

Just show up. It is free and you even get a booklet, Skywarn sticker, and certificate.
I would encourage anyone to go. Even if you don't intend on reporting severe weather, it will help in educating the public in being able to tell the difference between severe weather and some look-alikes. It can be just as important to be able to tell the real thing from the not-so-real things. Lots of resources get tied up when folks call in false reports of tornados.

If you have a scientific calculator, many have a way to convert numbers from decimal to octal to hex to binary.
If you don't, you can download one off the internet that can.
Here's one I found that can do it:
http://www.tucows.com/preview/197961

After you download the calculator, run it.

So to figure out the hex representation for decimal talkgroup 14896, click on the "Binary" tab. Enter 14896 into the box marked "DEC". You will see the other values in their corresponding boxes.

In the Hex box, you will notice it says "00003A30". So 3A30 is the hex equal to 14896.
In the world of Motorola trunking radios, they only refer to the "3A3" part, dropping the last "0".
So if you were to look at the programming of a two way, you would only see 3A3.

I feel stupid now, I thought I had a scientific calculator already on the computer.
Check out the calculator that comes on Windows (at least it does on XP).
Click on "View" and then "Scientific".
Now you have your hex converter.
Click on "DEC", type your talkgroup in the window, and then hit the "Hex" circle.
There is your answer too, without downloading anything special.

Took a snippet from a post on another scanner group:
> Turns out the
> nosewheel on the A-10 blew out about 4500 ft. down the runway. But,
> the REAL excitement came when I heard a C-130 (my favorite plane of
> all time), inbound ... and then say they were going to do a shortfield
> landing past the A-10. That thing touched down in front of me, and
> came to a complete stop in about 2500 ft!!!

Now my question is, how critical was it that the C-130 just HAD to land and could not wait until the A-10 was cleared?

This was at the old Carswell base in Fort Worth, now the Naval Air Station Joint Reserve Base.
There is only one runway, and it is 12002 feet long.

For comparison to airports here in town you may be more familiar with, Ellington's longest runway is 9001', Hobby's 7602', IAH's 12001'.

# 10804. Re: Pasadena Fire 2-tone page problems

I finally out what the problem was, I had the modulation for all the tones set to 'auto'. After playing around with it a bit and asking some other 396 owners, i figured out that I needed to specify the modulation setting to FM. Now all the tones work(tested twice). Thanks for all the help Myles and Frank.

Niko

Great tip. Now if I could get someone to score a 396 for by birthday last week (hint-hint)...
So I wonder what default setting "auto" was using. Might have been narrowband FM if it was having trouble decoding the higher frequencies. Higher audio frequencies on a carrier means higher deviation (bandwidth).
What frequency were you using to decode the tones?-154.010 MHz or 800 MHz?

From: niko627is
Topic: 10668  Message: 10810

I am using 154.010. Also i think the default setting was "NFM" so
that was probably the problem.
Happy belated birthday.

Niko

Just listened to it. Was listening to Channel 13 audio on way home so
didn't hear PD on citywide. Information overload.
For folks having trouble getting Josh's link to work, open Windows Media
Player, then Open URL and paste the URL
mms://joshserver.gotdns.com/pursuit.mp3 in the box.

I view all my email as plain text anyway AND run virus protection, and
firewall.
Usually don't have to worry about emails from members on this list but when
a valid member's address gets spoofed, all bets are off. As a precaution,
the two member's accounts have been set to "moderated" status until we
establish this was a random thing.
Really, anyone can use an anonymous remailer to send a message to the list
and make it look like it was sent by a group member.

Just a reminder, might be a good idea if you run virus protection to
manually get an update.
Sometimes, you might only be updated automatically once a week or even less
often.
Since something could be going around, might as well see if there is a patch
to protect you.

Virue Protection

In our office yesterday we had a Virus get into one of our computers through someone that had connected through some e-mail address of people that we do business with on a normal day. It showed that the e-mail was from someone that we recognized, one of our people then opened the attachment, then bamm, his programs started doing funny things. We had just put an update of Norton on all of our computers.

We have not found any way to stop something like this.

# 10819. RE: [HoustonScan] Re:

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-19 17:58:07 UTC
From: Scott Royall
Topic: 10818  Message: 10819

Unfortunately, Norton hasn't had a good reputation for several years. I personally lean toward the McAfee Virusscan line, but even Panda is more effective than Norton. There are also good free options like AVG. My point is, I get no viruses and very little spam--although Cloudmark is responsible for the latter miracle--so the goal is easy to achieve.

Well.. far as I can tell, I didn't send the message in question, and
scans with a paid program that is up to date (NAV) and Antivir.. both
come up clean.

# 10821. Starnet Modulation?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-20 05:53:44 UTC
From: niko627is
Topic: 10821  Message: 10821

Since we are on the topic of modulation, what modulation should I set for the frequencies of StarNet?

Thanks,
Niko

What scanner model do you have?

# 10824. Hello!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-20 19:40:20 UTC
From: pmcdn2001
Topic: 10824  Message: 10824

I am new to this group but been messing with Radioshack scanners for a while. I recently got a Pro-97 and Win97 and am learning all about that.

I am learning how to scan trunked radio in Houston and set up one bank with "Down town" Houston and a "City of Houston" trunk.

I live in the Galleria area and if anyone knows any links or info on more scanning info or has any Pro-97/Win97 files to share, I would appreciate it!

Cheers!

~dp

Running Trunker on the Starnet system shows information at the top of the display "Type II NetWkd 83.72 Hz". My question is what does the "83.72 Hz" refer to? This is an aspect of the system that I don't understand. Thanks for you help.

83.72 Hz is the trunked system connect tone.

# 10828. Re: [HoustonScan] trunker

The short and simple explanation is that it is like a CTCSS or PL tone for
the mobiles to use on any given trunk system site.
There is more to it than that but the true use of it is beyond the scope of
most garden variety scanner listeners.
You can look in these documents and search for "connect tone" to learn more
about the inner working of trunking systems:
http://www.aeroflex.com/products/commtest/pmr/appnotes/904.pdf

Thanks for the information everyone. Do you know if scanners like my BC796D detects this tone and uses it and if that is the "connect tone" is there a "disconnect tone" on the Starnet system? thanks

From: Myles Barkman
Topic: 10826  Message: 10831

There is a disconnect tone of 163.64 Hz that is the same globally. But that is only used by the mobiles on the input. The connect tone and disconnect tone features are not accessible on scanners, nor do they need to be.

Thanks to everyone for the info. I guess scanners use simple carrier squelch and don't need to decode the tones in order to switch to the control channel as the mobile units do. Thanks again.

# 10834. new airport system talkgroups?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-23 11:03:53 UTC
From: Myles Barkman
Topic: 10834  Message: 10834

Try putting these in your scanners for use on the STAR-Net trunked system.
They may all be used by the Houston Airport System.
57616
57648
57680
57712
57744
The last three appear to be used more often.

Pasadena Police Fatally Shoot Deer Park Gunman
Investigators Say Gunman Fled After Shooting Person At Sonic Drive-In

POSTED: 1:52 pm CST January 23, 2006
UPDATED: 2:00 pm CST January 23, 2006

HOUSTON -- A shooting suspect was shot and killed Monday after he shot someone and led officers on a chase, KPRC Local 2 reported.

The incident began at about 1:15 p.m. when a person was shot in the parking lot of a Sonic Drive-In on Pasadena Boulevard near Center Street in Deer Park.

Officers with the Deer Park Police Department said the suspect fled the scene, but was spotted by Pasadena police, who began chasing the suspect.

The chase ended when a Pasadena police officer fatally shot the suspect on Spencer Highway at Lilac Street.

LifeFlight was called to transport the Sonic shooting victim to a hospital.

The incident remains under investigation

Like someone else said, FM, I didn't know you could change the
modulation for trunking on the 396. I know on the 246 you can't.

Wow, that's about 3/4 of a mile from my house! Now that news clip doesn't appear to give the whole story either.
Channel 13 says that an officer blocked the roadway and the suspect rammed the vehicle, pushing his fleet into him as he stood outside. The officer discharged his weapon and there was question as to whether the officer killed the suspect or if it was self-inflicted.

Appears KPRC changed the story to reflect that last bit after first reporting it.

IN THE FIRST MOT TRUNK SYSTEMS, THERE WERE NO CONNECT TONES.

THE ACT JUST LIKE PL TONES ON THE INPUT TO THE TRUNK REPEATER CHANNELS.

THE CONNECT TONES ON THE TRUNK SYSTEMS WERE IMPLEMENTED YEARS AGO WHEN
"BIG M" FOUND OUT THAT SOMETIMES DURING BAND OPENINGS SOMEONE IN HOUSTON
OR SO COULD KEY UP ON A SYSTEM IN DALLAS OR SAN ANTONIO FOR INSTANCE.

CUSTOMERS WOULD CALL AND COMPLAIN THAT SOMEONE WAS ON "THEIR" CHANNEL
BECAUSE "M" TOLD THEM THAT BECAUSE OF THE TRUNKING, THAT NO ONE WOULD BE
ON "THEIR" CHANNEL AND THAT IT WAS PRIVATE.

SOMEONE COULD ALSO DRIVE INTO ANOTHER AREA AND ACCESS A SYSTEM IF THEIR
CODE WAS TURNED ON IN THAT SYSTEM .

Houston Scann

I just got this memo from Motorola on the issue of Pager's causing fires. There seems to be some misinformation out there that Motorola Pagers are causing fires and Motorola has a recall on them. That is not true and memo attached.

MOTOROLA STATEMENT FOR PUBLICATION:

Motorola statement on issuance of a Service and Repair Note regarding the Motorola Minitor V Charger Amplifier:

In December 2005, Motorola issued a Service and Repair Note to Motorola dealers and other distribution channels informing that in some cases a Minitor V pager battery will not charge or the customer will notice the pager will not power up after being placed in a charger amplifier instead of the standard charger. Motorola is reviewing the charger amplifier functionality and will alert its dealers and other distribution channels to a resolution of the charger amplifier issue.

In the meantime, Motorola is recommending discontinuing use of the charger amplifier and instead using the standard charger when charging the Minitor V pager battery. Customers that do not have the standard charger, can contact Motorola Technical Services Organization at 800-927-2744 (prompts 3-4-1) and request a standard charger at no cost.

Motorola is confident that this is not a product safety issue and that neither the battery nor the charger amplifier pose risks to users. The charger amplifiers are not being recalled - rather Motorola recommends that they not be used until the issue has been resolved. Motorola issued the Service and Repair Note so that dealers and other distribution channels can alert Minitor V customers to use the standard charger in lieu of the charger amplifier to assure that the batteries are properly charged. Motorola sincerely regrets any confusion the original Service and Repair Note may have caused.

Speaking of FD TAC channels, next month, Pasadena will be starting a new dispatch procedure where a TAC channel will be assigned when a call is dispatched. So if you listen to 154.010 or the Houston STAR-Net site, you may miss some action. Best sites to catch Pasadena on are Pasadena, Baytown, and Pearland.

# 10851. Re: trunker

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-29 20:46:53 UTC
From: rmeyn57
Topic: 10826  Message: 10851

I just re-read my owner's manual for my BC796D. On page 48 it tells how to turn on "end tone detect" which will send the radio back to the control channel before the carrier drops out. I think that I read somewhere that this is a 150Hz tone.

Speaking of FD TAC channels, next month, Pasadena will be starting a new dispatch procedure where a TAC channel will be assigned when a call is dispatched. So if you listen to 154.010 or the Houston STAR-Net site, you may miss some action. Best sites to catch Pasadena on are Pasadena, Baytown, and Pearland.

Subject: [HoustonScan] Fw: HFD Tac channels now geographic

From HFD Capt MacDonald:

HFD's initial Tac channel assignments have changed to a geographic approach.

Now, Tac 2 is North (DC 4,5,19,31,34,45,64,96,102), Tac 3 is Central & West (DC 6,8,10,28,69), and Tac 4 is South (DC 20,21,26,46,70,71,82).

# 10853. CenterPoint pulls back on broadband testing

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-01-29 23:18:18 UTC
From: Myles Barkman
Topic: 10853  Message: 10853

Got this from another list.....

http://www.chron.com/disp/story.mpl/front/3613035.html

CenterPoint pulls back on broadband testing
Delivery over power lines not likely for now

By JON PAUL MOROSI
Copyright 2006 Houston Chronicle

Last year, residents of a Greenway Plaza-area neighborhood served as the test group for CenterPoint Energy's Broadband over Power Lines technology. It navigated the Web more rapidly than on a standard broadband or DSL connection, using modems that simply plugged into their wall sockets.

The faster pace, it seems now, was only fleeting.

Emily Mir Thompson, a spokeswoman for the Houston company, indicated this week that while the company is "still evaluating" this technology and will not release its findings until next month, CenterPoint is unlikely to offer it to consumers as a means to surf the Web.

Other utilities have made similar decisions.

"Clearly, this is a market a lot of utilities have bounced in and out of," said David Willis, chief of communications research at Gartner. "The timing in this is difficult, because they're in the midst of a price war between DSL and cable.

"The best strategy for a utility company is to go where there is no competition - underserved, possibly rural areas."

Others have tried

CenterPoint's anticipated decision is "very common" among power companies that have ventured into this market, according to Christy Rickard, an associate analyst at Kagan Research.

Those who have continued to market broadband over power lines are largely in rural areas. Rickard said four of the nation's five commercial developments in the technology are in smaller communities, including two in Virginia and one each in Illinois and Michigan. The other is in Cincinnati.

North Texas will soon be home to another exception. Later this year, TXU Electric Delivery plans to begin installation of broadband-over-

power-lines technology, which will ultimately become available to 2 million subscribers in the Dallas-Fort Worth area.

TXU's partner is Current Communications Group, which will be responsible for the retail Internet offering. Hearst Corp., the parent company of the Houston Chronicle, is an investor in Current.

Carol Peters, a TXU spokeswoman, said Current will use TXU's lines "as a highway to deliver their product." And through Current's technology, TXU will be able to replace standard meters with more sophisticated automated models.

CenterPoint is expected to use broadband over power lines to track the health of its equipment, an approach that would bring "a significant return on investment," said Joyce Putscher, principal analyst for In-Stat. The technology will also improve monitoring of remote meters.

By using broadband to track their infrastructure, Putscher said, utility companies may prevent blown transformers and replace them at a lower cost.

HAM radios affected

But in some cases, this technology has had adverse effects on other forms of communication, including HAM radio. David Woolweaver, a Harlingen resident and National Association of Amateur Radio member, described the phenomenon as "a major problem."

"Many BPL systems are terrible spectrum polluters," he wrote in an e-mail Wednesday. "In some cases, the spectrum pollution is so significant as to interfere with emergency and police communications."

Peters, however, said Current's operation in Cincinnati has not caused any complaints in 18 months.

"We don't foresee any problems from HAM operators," she said.

This service is currently available to 67,000 homes nationwide, Rickard said, and between 2,000 and 5,000 subscribe. The service costs between $25 and $45. Rickard said some industry observers believe it will not become viable unless it costs less than the available broadband options.

"Over the next few years, it should become more affordable in rural areas," Rickard said. "It's still a nascent technology. They're working out the kinks."

Kama Sutra Worm Set for Attack on Feb. 3

Walaika K. Haskins, newsfactor.com Wed Feb 1, 6:54 PM ET

Security analysts are warning computer users about a new and potentially destructive Internet worm that can obliterate important documents. The worm, called Kama Sutra, is making the rounds now, but is scheduled to execute its first massive attack on February 3.

The malicious worm targets computers running Windows and spreads primarily by copying itself to shared network locations and then sending itself to e-mail addresses found on afflicted computers. With subject lines that read "the best videoclip ever," "give me a kiss," and "school girl fantasies gone bad," the worm entices computer users to open the attached file.

"This worm feeds on people's willingness to receive salacious content on their desktop computer, but they could be putting their entire company's data at risk," said Graham Cluley, senior technology consultant at Sophos.

According to Sophos, on the third of each month, the worm will attempt to disable existing antivirus and firewall software and also will delete specific files, such as Microsoft Office documents.

Waxing or Waning Threat

The worm is also known as Blackworm, Nyxem-D, and W32.Blackmail.E, among others. There are disagreements in the security industry about the severity of the worm, with Symantec and F-Secure taking different positions on the issue.

Controversy stems from interpreting one of the worm's most intriguing features: a Web counter. Once the worm infects a new computer, it accesses a Web page on which there is a counter. The counter number increases whenever the Web page is accessed.

Andrew Jaquith, a Yankee Group senior analyst, said that most reports indicate that the counter had risen already to 700,000, which could indicate that nearly a million computers are infected.

Much of the speculation in the industry about the potential for damage done by the Kama Sutra worm centers on the counter number -- which might represent unique machines or accesses to the counter page by the same machine more than once. One of the things that is "sorely lacking" with mass outbreak malware like the Kama Sutra worm, Jaquith said, is any real sense of how many machines are compromised.

"We still don't know, for example, how many machines were really affected by the WMF vulnerability," he explained. "The antivirus vendors don't seem to know either, or are unwilling to divulge much -- possibly because it would expose gaps in their signature coverage."

Back to Old-School

To address what is so far the most expansive malware attack in 2006, speculation among security vendors and researchers has focused on the destructive nature of the worm. Unlike most viruses currently in the wild, the Kama Sutra code is not intended to reap the code writer a windfall of ill-gotten gains. The hacker designed the worm to create mayhem by destroying documents.

"The reason why experts at Sophos believe the worm is likely to have been written by an old-school hacker rather than an organized criminal is its destructive payload," Cluley explained. "That kind of destructive behavior is not typical of financially motivated worms because the damage is too obvious to the end user."

Frost & Sullivan analyst Rob Ayoub said he is not convinced that the worm represents the work of an old-school hacker, but did suggest it is unusual. "This is just something we haven't seen in a while. It's not a botnet or a zombie. It's a throwback to malware that only seeks to create havoc."

ActiveX Controls

Of greater concern, said Ayoub, is the worm's ability to deceive Windows into receiving a malicious ActiveX control by providing a phony digital signature. Discovered originally by Fortinet, the worm apparently adds some 18 entries to the Windows Registry, allowing it to insert an ActiveX control that can circumvent Windows' defense mechanisms.

The development is interesting, Ayoub said, because, heretofore, the assumption has been that if a piece of software has a digital signature, then it is safe. Ayoub said Microsoft will need to take a serious look at digital-signature technologies.

"In the past, it has always been if the company signs it, then it must be authentic," Ayoub said. "Microsoft needs to look at the digital signing process or else we will see more things like this, and that is pretty dangerous because it gets around some of the safeguards that are supposed to keep these things out."

Analysts are urging computer users, especially home users, to make sure that they have up-to-date antivirus software installed on their machines. "There should be no excuse for any data being lost on February 3 by this worm, but there is always the danger that some home users will not have heard that warning," Cluley said.

# 10862. FD terminology

Wondering if someone could clear something up for me.
With HFD, are the terms 1-11 and 1-alarm the same thing?
Now with taps, that's just saying how many hydrants (or other water sources?) they are using.
Why is it necessary to announce that on the air though?

Hi Myles,

A 1-11 fire is a working structure fire, which sends addition units, such as a safety officer etc. Also certain HPD units respond to 1-11 fires. A "tap" is an additional engine company above the initial alarm. If the chief requests 3 taps, then that's 3 additional engine companies, not quite a 2-alarm assignment.

There used to be no 1-11, it was simply a box alarm. Last year HFD cut
back their standard box alarm response and came up with 1-11's. A 1-11 will get
you 1 more Chief, Ladder, and Engine. A Chief may arrive at a working fire
and call for a 1-11 right away, or he may decide it's not a big fire and can
handle it with what he's got already.

From the PD side we will typically send a unit for traffic control if they
ask us, but they don't always let us know about it.

For a 2-11, they get (I think) 4 more engines, 3 more ladders, 2 more
chiefs, Rescue, a Safety Chief, and Rehab and Cascade. PD is then supposed to send
a Sergeant to the scene to meet with the HFD Chief in charge.

Steve

Jury - 12 people who determine which client has the better lawyer.

OK, thanks guys for that explanation. Lord knows where I got that idea about "tap" being a hydrant. Don't know if someone told me that or if I rationalized that equating it to a water faucet tap. Is that lingo not widely used but localized to Houston? Can't seem to find it's use elsewhere.

Hi Myles,
It's nationally known from the days before radio. The chief would go to the fire alarm box on the nearest street corner, (to the fire) open it and there would be a telegraph key. Each 'tap' of the key would ring the bell in all the firehouses and dispatch office. One tap would bring one additional engine, and etc. He could also pull the box handle, bringing a 2nd alarm.
Hope this helps,
Marvin

Marvin,

Thanks for reminding us of our history. I'm slowly realizing that Myles isn□t as old as I tend to think he is.

Scott

# 10868. new fujita scale

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-05 07:07:24 UTC
From: Myles Barkman
Topic: 10868  Message: 10868

For you weather aficionados, there is a new Fujita scale to reference the damage due to tornados.
More info here:
http://www.spc.noaa.gov/faq/tornado/ef-scale.html
http://www.spc.noaa.gov/efscale/

Starting in 2007, we will start calling a weak tornado, an EF-0.
Looks like this change has been in the works for a couple of years now.

You're welcome Scott,

I've been a fire buff for awhile and have a couple of the old Gamewell Fire Alarm boxes.

Take care,
Marvin

And thank you from me too. I don't want to be as old as I think I am either.
My wife would attest that I'm immature. :)

It is interesting about how they still keep some of the old terminology even after the original meaning is lost/obsolete.

It sounds from the description Marvin provided, that "Tap Out" would come from the same place. To "tap" the telegraph key to indicate that the fire was out.

Excellent history lesson gentlemen!

Mike Jones

# 10872. New STAR-Net sites, and other stuff

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-05 17:32:24 UTC
From: Myles Barkman
Topic: 10872  Message: 10872

Just poking around on the FCC database site and noticed freqs for three more STAR-Net sites.
WQDW910 licensed Nov.2005:

"Freeport"-300' tower near 332 and 288 south of Clute. Antenna at 180' level.
Centerpoint Energy has antennas at the higher spots on tower
866.5375
866.900
866.9875
867.125
868.500
868.550
868.8125

"Galveston"-285' tower near 25th and Church. Antenna at 235' level.
Centerpoint Energy has antennas near top.
866.800
866.875
868.3125
868.600-note: was licensed at Alvin site but hadn't heard used in a long time80

"Texas City"-tower ID is 1001973 near 197 and 146. Getting two different coordinates as to where this tower is (about 450' apart) and how high it is.
Is same tower that Galveston County trunk is running on in Texas City.
Galveston County says the tower is 690 feet and antenna is at 535' level.
Harris County says tower is 550 feet high and antenna is at same height as Galveston County(535').
866.125
866.3375
866.625-confirmed used
868.300
(also using 866.5875 and 867.550, licensed to Galveston County)

Also, here are some freqs licensed in November to Schlitterbahn Galveston Island Waterpark WQDV411
